

IN THE COURT OF COMMON PLEAS
OF LORAIN COUNTY, OHIO

DOC.
197

KATHY WENZEL

plaintiff :

vs. : Case No. 93CV110774

JUNG HUH, M.D.,

et al.,

Defendants :

- - - - -

DEPOSITION OF JUNG HUH, M.D.

VOLUME I

FRIDAY, AUGUST 19, 1994

- - - - -

The deposition of JUNG HUH, M.D., the

Defendant herein, called by counsel on behalf of
the Plaintiff for examination under the statute,
taken before me, Vivian L. Gordon, a Registered
Professional Reporter and Notary Public in and for
the State of Ohio, pursuant to agreement of
counsel at the offices of Jung Huh M.D., 4520
Oberlin Avenue, Lorain, Ohio, commencing at 9:00
o'clock a.m. on the day and date above set forth.

- - - - -

Vivian Gordon, RPR-CM
MORSE, GANTVERG & HODGE

1 **APPEARANCES:**

2 **On behalf of the Plaintiff**

3 Becker & Mishkind, by
4 HOWARD D. MISHKIND, ESQ.
5 Skylight Office Tower

1 JUNG HUH, M.D., a witness herein, called
2 for examination, as provided by the Ohio Rules of
3 Civil Procedure, being by me first duly sworn, as
4 hereinafter certified, was deposed and said as
5 follows:

6 EXAMINATION OF JUNG HUH, M.D.

7 BY-MR. MISHKIND:

8 Q. Would you state your name for the record,
9 please.

10 A. Jung Huh J-U-N-G/H-U-H.

11 Q. You are a physician; correct?

12 A. Yes.

13 Q. My understanding is that you are an
14 orthopedic surgeon?

15 A. Yes.

16 Q. Before I begin my formal questioning of you
17 relative to Kathy Wenzel, I just want to give you
18 a few precautionary instructions so as to aid you
19 in fully understanding what I am going to be
20 asking you.

21 A. Yes.

22 Q. Let me start out by asking you, doctor,
23 have you ever given a deposition before?

24 A. Yes.

25 Q. On how many occasions?

1 A. I can't remember the exact numbers, but
2 probably about, between five, ten times.

3 Q. Have any of those occasions been in
4 connection with medical malpractice cases?

5 MR. POLITO: Objection.

6 A. Yes.

7 Q. Of the five to ten, how many times have you
8 been deposed in medical malpractice cases?

9 MR. POLITO: Objection. Just show
10 a continuing line of objection. Go
11 ahead, doctor.

12 MR. MISHKIND: That's fine.

13 A. Probably about three, four times.

14 Q. In those three to four times, were you
15 named as a defendant in a medical malpractice case
16 or were you appearing in some other capacity?

17 A. I think three times as a defendant and the
18 rest of it probably as a witness for other persons
19 involved.

20 Q. Have you ever testified as an expert
21 witness?

22 A. Yes, many times.

23 Q. Have you testified as an expert witness in
24 medical malpractice cases?

25 A. No.

1 Q. You have testified as an expert witness in
2 connection with one of your patients in a personal
3 injury case; is that the capacity?

4 A. Yes.

5 Q. And that would make up the other occasions
6 where you have had your deposition taken; correct?

7 A. If I include those, the numbers, a lot more
8 than four or five. What I mean is, I have done
9 many more depositions for my patients as a
10 witness.

11 Q. Let me just try to clarify a few things,
12 and this isn't intended to be tricky by any
13 means. I understand that you have given a
14 deposition where someone has filed a lawsuit
15 against you on three prior occasions; today being
16 now the fourth occasion; is that correct?

17 A. I believe so.

18 Q. You have given depositions on behalf of
19 patients that were injured or were under your
20 treatment and some lawyer came and asked you
21 questions about your patient; correct?

22 A. Yes.

23 Q. And approximately how many times have you
24 given depositions in that context? Roughly
25 speaking.

1 A. Roughly, probably more than ten times. I
2 misunderstood your first question. I thought it
3 was strictly regarding medical malpractice.

4 Q. More than ten times during your career you
5 have been asked to give deposition testimony
6 concerning patients of yours that were pursuing a
7 personal injury action?

8 A. Yes, that's correct.

9 Q. Initially, you had said somewhere between
10 five and ten times you have had your deposition
11 taken. I now know that three of those times
12 related to cases where lawsuits were filed against
13 you.

14 Tell me what the other roughly seven times
15 or so, five to seven times or thereabouts, where
16 you have had your deposition taken in medical
17 malpractice cases, in what context were you being
18 deposed? If you understand the question.

19 A. No.

20 MR. POLITO: I think what he meant
21 and that's where he got confused, that it
22 was three times in medical malpractice
23 and all the other times have been on
24 behalf of patients.

25 THE WITNESS: Yes, for my patients.

1 Q. Okay. I guess you confused me by saying
2 five to ten times you have given depositions and
3 just before we move off this area, is it fair to
4 say that you have given depositions now four
5 times, including today in medical malpractice
6 cases? In all other situations the depositions
7 that you have given have been related to personal
8 injury actions on behalf of your patients?

9 A. That is correct.

10 Q. Thank you, doctor.

11 As I question you this morning relative to
12 Kathy Wenzel, I will attempt to make my questions
13 as clear and understandable as possible. If I
14 don't, tell me, Mr. Mishkind, I don't understand
15 what you are asking. I will attempt to rephrase
16 it. If I can't make it more intelligible than I
17 gave it to you the first time, I will ask Vivian
18 to read the question back to you. We will do
19 whatever we can so that before you answer the
20 question, it's in a sentence that you understand.

21 A. Yes.

22 Q. So don't be bashful to ask me to rephrase
23 it or read the question back, okay?

24 A. Right.

25 Q. If you don't know an answer, doctor, tell

1 me that you don't know. If you need to refer to
2 your records, please feel free to do so. This is
3 not a memory contest.

4 A. Yes.

5 Q. I give you these precautionary
6 instructions, because sometime down the road,
7 people may be looking at your deposition
8 transcript and I don't want there to be any
9 misunderstanding between you and me at a later
10 point; you say I didn't understand what you were
11 asking. I want to give you every opportunity now
12 before you answer to make sure that you understand
13 my question.

14 A. I understand.

15 Q. Okay. Thank you.

16 The three prior situations where you had
17 your deposition taken in medical malpractice
18 cases, did any of those matters go to trial?

19 A. Yes.

20 **a.** How many, sir?

21 A. One.

22 MR. POLITO: Howard, just so the
23 record is clear, I do have a continuing
24 line of objection.

25 MR. MISHKIND: I did note that and

1 I would not argue that your objection
2 fell off the edge of the page. **It's**
3 continuing.

4 Q. The situation, doctor, that went to trial,
5 what was the name of the patient in that case?

6 A. I think her name was Goforth.

7 Q. Goforth?

8 A. G-O-F-O-R-T-H, something like that.

9 Q. How long ago did that go to trial, **sir**?

10 A. Maybe about ten years ago.

11 Q. Was that here in Lorain County?

12 A. Yes.

13 Q. Was that -- did a jury return a verdict in
14 that case?

15 A. Yes.

16 Q. Was it in your favor or the patient's
17 favor?

18 A. It was in my favor.

19 Q. The other two cases did not go to trial?

20 A. No.

21 Q. Did any of those cases involve issues
22 relative to the management of fractures of the
23 forearm or issues relating to your management, I
24 should say, of fractures of the forearm?

25 A. No. Do you mean including Goforth or those

1 two which were not brought to trial?

2 Q. All of the cases, doctor. Did Goforth
3 involve a forearm fracture?

4 A. Actually close to the forearm. It's a
5 fracture of the elbow. It's not forearm. It's
6 close.

7 Q. And essentially, as I recall, and
8 understand -- I understand it's been many years
9 now since that case went to trial, but what was
10 the issue relative to the elbow that the patient
11 was critical of?

12 A. She had a fracture of the radial head and
13 neck. She was, I think, about an 18 or
14 19-year-old girl. We treated her. The fracture
15 healed all right.

16 I advised her to have her physical therapy,
17 but she was very defiant and she did not want to
18 have any treatment, physical therapy for a long
19 time.

20 By the time she changed her mind many
21 months later, she, even though she had the
22 therapy, she had some limited motion.

23 And then six or seven months afterward, she
24 went to another doctor and was found to have a
25 fracture of the wrist; and at the trial -- I

1 remember because that was my first trial at the
2 court -- she mentioned that the fracture of the
3 wrist was not the issue, but she -- or was it the
4 other girl?

5 Limited motion of the elbow was not the
6 issue, but the fracture of the wrist was something
7 that I did not treat. But she had X-rays of the
8 elbow and wrist and even shoulder when I saw her
9 and at that time X-rays were negative.

10 The fracture of the wrist that she later
11 had was nothing to do with my treatment.

12 Q. Fair enough. You recall the details of
13 that case fairly well. Do you recall who was the
14 expert that testified on your behalf in that case?

15 A. There was no -- he did not testify in
16 person, but I know through the PIE there was a
17 professor in Cleveland, Brooks.

18 Q. Dennis Brooks?

19 A. Yes, I think he reviewed my case and he
20 gave an opinion to the panel.

21 Q. Doctor, your office that we are at today is
22 on Oberlin Avenue. Is this the only office that
23 you maintain?

24 A. I also go to Oberlin Clinic in Oberlin.

25 Q. How do you divide your time between the two

1 offices?

2 A. I go to Oberlin Clinic every Thursday
3 afternoon and then every other Saturday morning.

4 (Thereupon, a discussion was had
5 off the record.)

6 Q. Do you have a subspecialty in the area of
7 orthopedic surgery?

8 A. I have an interest and the practice I do
9 more, but I don't claim that I have a
10 subspecialty.

11 Q. What is your interest?

12 A. That I practice fractures and other
13 orthopedic problems.

14 Q. Well, as an orthopedic surgeon -- well, why
15 don't you define for me what the discipline of
16 orthopedic surgery involves.

17 A. That involves the restoration and treatment
18 of the function of the musculoskeletal system,
19 that includes bones, joints, muscles, ligaments
20 and tendons.

21 Q. And within the discipline of orthopedic
22 surgery, you have an interest that focuses on
23 fracture management?

24 A. Yes.

25 Q. Did you say something else besides fracture

1 management?

2 A. General orthopedics involving adults.

3 Q. So fracture management and adult
4 orthopedics?

5 A. Yes.

6 Q. Now, do you have any specialized training
7 in the area of fracture management?

8 A. No. Usually we don't require to have a
9 special training in fractures for orthopedic
10 surgeons,

11 Q. How have you evolved this interest in
12 fracture management?

13 A. Well, the majority of my work involves
14 fractures, I think that's why.

15 Q. What percentage of your practice involves
16 fracture management?

17 A. Probably 60, 70 percent.

18 Q. What percentage of your practice involves
19 general adult orthopedics?

20 A. About 20 percent, 25 percent.

21 Q. You are board certified; is that correct?

22 A. Yes.

23 Q. What country are you originally from?

24 A, From Korea.

25 Q. Did you do medical school training in the

1 U.S. or abroad?

2 A. I had two years in premedicine and then
3 four years in medical school before coming to this
4 country for postgraduate training.

5 Q. And was that all back in Korea?

6 MR. POLITO: The two years and
7 four years?

8 MR. MISHKIND: Yes.

9 A, Yes.

10 Q. What medical school?

11 A. Yonsei Y-O-N-S-E-I University, College of
12 Medicine in Seoul, Korea,

13 Q. What year did you graduate?

14 A. 1962.

15 Q. When you came to the U.S. then, you did
16 your post or you did your graduate work then at an
17 American institution?

18 A. Yes, that is correct.

19 Q. What city did you move to?

20 A. It was New York City in 1965.

21 Q. What did you do between '62 and '65,
22 doctor?

23 A. I had served in the Korean Army as a
24 medical officer for three years.

25 Q. '65, you then went to New York City and

1 started an internship someplace?

2 A. Yes,

3 Q. What hospital?

4 A. Jewish Medical Center and Hospital of
5 Brooklyn, Brooklyn, New York, was for one year
6 from July 1st, 1965 to June 30th, 1966.

7 Q. That was a one year internship?

8 A. Yes, rotating internship.

9 Q. Did you then enter into a residency program
10 after that?

11 A. Yes.

12 Q. At Jewish Hospital?

13 A, No. I moved to Elyria Memorial Hospital in
14 Elyria, Ohio and I took two years in
15 general/surgical residency.

16 Q. What additional residency or Fellowships
17 did you pursue?

18 A. Then I took four years in orthopedic
19 training.

20 Q. At Elyria?

21 A. Yes, at the same institution.

22 Q. Was this continuous after your two years of
23 surgery residency?

24 A. Yes.

25 Q. Four years was exclusively orthopedics?

1 A. Yes.

2 Q. After completing your four years, did you
3 then enter into the private practice?

4 A. Yes, that is correct.

5 Q. And have you continued in the private
6 practice since finishing your four year residency
7 in orthopedics?

8 A. Yes, the same location,

9 Q. Here and at the Oberlin Clinic?

10 A. Oberlin Clinic I started, I believe it was
11 1977 or '78.

12 Q. And when did you start here on Oberlin
13 Avenue?

14 A. It was about 14 years ago.

15 Q. 1980?

16 A. Yes, about 1980.

17 Q. So you actually started Oberlin Clinic
18 immediately after finishing your four year
19 residency in orthopedic surgery?

20 A. No. I had established a practice here in
21 town, Lorain.

22 Q. A different address?

23 A. Different address.

24 Q. Okay.

25 A. And then they invited me to come down. I

1 don't belong to the Clinic, but I had maintained
2 my office there since then.

3 Q. Do you have any partners or associates that
4 you practice with in your area of orthopedic
5 surgery?

6 A. I used to have partners, but unfortunately
7 after I joined two and a half years later, it
8 dissolved.

9 But since then, I have been signing out to
10 each other, one of the partners. He is not my
11 partner, my associate. But on weekends, sometimes
12 we sign out each other.

13 Q. So he will cover for you on specific cases?

14 A. Yes.

15 Q. And you will help him out on specific
16 cases?

17 A. Yes.

18 Q. Who is that individual?

19 A. Dr. Sfeir S-F-E-I-R.

20 Q. Do you do any teaching, doctor?

21 A. No.

22 Q. Have you done any teaching?

23 A. No.

24 Q. You have hospital privileges at Lorain
25 Community and St. Joe's?

1 A. Yes.

2 Q. And Elyria?

3 A. No. I don't go to Elyria, but I do have at
4 Allen Memorial Hospital, Oberlin.

5 Q. Have you ever had privileges at Elyria
6 Memorial Hospital?

7 A. No.

8 Q. Have you ever had privileges at any other
9 hospital other than Allen, St. Joe's or Lorain
10 Community Hospital, in the Ohio area?

11 A. I still have courtesy privileges at Amherst
12 Hospital. I did not mention that.

13 Q. Any other hospitals?

14 A. No.

15 Q. Have you ever had privileges revoked or
16 suspended at any hospital?

17 A. No.

18 Q. Tell me, doctor, have you done any writing
19 at all in the area of orthopedic surgery?

20 A. I had one when I was a resident.

21 Q. What was the topic?

22 A. The topic was long term effect of
23 epiphysiotesis and slipped capital femoral
24 epiphysis.

25 Q. The slipped capital epiphysis, what was the

1 first part?

2 A. Long term effect of
3 E-P-I-P-H-Y-S-I-O-T-E-S-I-S. That is a form of
4 surgery which abolishes the growth plate.

5 Q. This is in pediatric cases?

6 A. Yes.

7 Q. Were you embarking upon a -- or were you
8 planning on going into pediatric orthopedics at
9 that time?

10 A. No. That term, actually the paper was for
11 the preparation for the Ohio Orthopedic Society,
12 and that subject was chosen by me and at that time
13 the attending, and we presented it at the annual
14 Orthopedic Society meeting.

15 Q. That's back into what, the middle '70s or
16 thereabouts?

17 A. I think it was either 1970 or '72, I'm not
18 sure.

19 Q. Since that time, doctor, have you published
20 or submitted any articles on any topic in medicine
21 for publication?

22 A. No.

23 Q. You have with you today your office records
24 on Kathy Wenzel; correct?

25 A. Yes.

1 Q. You also have the original jacket and
2 original films from St. Joe's here in Lorain for
3 her -- relative to the films taken in the cast
4 room or at the hospital when she went to the cast
5 room postsurgical?

6 A. Correct.

7 Q. And I think you also have your own films?

8 A. Yes,

9 Q. You do not have the, immediate preoperative
10 film taken on August 17th, 1991 or the immediate
11 post-op film taken on August 18th, 1991 from
12 Lorain Community Hospital?

13 A. No, we don't have.

14 Q. Okay. And just so that the record is
15 clear, you attempted to get that, but learned that
16 it had been signed out to another physician when
17 you went or attempted through your office to get
18 it for purposes of today's deposition?

19 A. That is correct.

20 Q. Okay. Do you have copies of the August
21 17th film and August 18th film? Not
22 interpretations, but copies.

23 A. Actual films, no.

24 Q. You have radiological interpretations in
25 your file for those films; correct? Take your

1 time, doctor.

2 A. They are in there.

3 Q. In a moment I am going to want to peruse
4 your file just to see what you have there, doctor,
5 but let me just ask you this.

6 In addition to what you have relative to
7 Kathy Wenzel's treatment that you generated in
8 your office, and what you got from the various
9 hospitals by way of copies that were sent to you,
10 have you had an opportunity to review the records
11 from Suburban Hospital for the surgery that was
12 performed by Dr. Morris in 1993 to correct the
13 nonunion of her radius and ulna?

14 A. No.

15 Q. Have you seen the extra films from
16 Beachwood Orthopedics? That's where Dr. Morris is
17 a practicing orthopedic surgeon.

18 A. I just glanced for the first time
19 yesterday. I did not see in the view box, but I
20 just glanced.

21 Q. Well, I have them with me today, so that
22 during the questioning, I may want to ask you some
23 questions about them. I just wanted to see
24 whether you had ever seen them before and I
25 presume probably yesterday during your meeting

1 with your attorney, you glanced at them?

2 A. Yes.

3 MR. POLITO: Just for the record,
4 he didn't glance at all of them. He
5 glanced at a few of them, but go ahead.

6 Q. Have you ever seen the Suburban Hospital
7 records for Kathy?

8 A. No, not at all.

9 Q. You are aware that she had surgery at
10 Suburban Hospital, aren't you?

11 A. He told me yesterday. That was the only
12 time I heard.

13 Q. Mr. Polito told you?

14 A. Yes.

15 Q. Have you seen reports from Dr. Jeffrey
16 Morris outlining his treatment?

17 A. No.

18 Q. That hasn't been provided to you?

19 A. No, not at all.

20 Q. I take it then, doctor, as you sit here now
21 on August 19th, 1994, you certainly have no basis
22 to criticize Dr. Morris with regard to the surgery
23 that he did to repair the nonunion of the radius
24 and ulna in Kathy Wenzel's arm?

25 A. No, not at all.

1 Q. Certainly you have no basis to criticize
2 the technique or the surgical approach that Dr.
3 Morris undertook to repair her arm?

4 MR. POLITO: As he sits here today
5 with what information he has?

6 MR. MISHKIND: Right.

7 A. I don't have any information. I know that
8 she had the surgery, from Mr. Polito, yesterday.
9 I glanced at the X-rays. I am glad she had the
10 surgery, because I --

11 MR. POLITO: Doctor, you
12 answered.

13 Q. We are going to get into that, don't
14 worry. We are going to get into it in short
15 order.

16 But from what you saw on the X-rays that
17 were shown to you, did it appear that there was
18 good reduction and good fixation of the ulna and
19 the radius following Dr. Morris' surgery?

20 A. Yes.

21 Q. Okay. Are you board certified?

22 A. Yes.

23 Q. Which boards are you certified by?

24 A. American Academy of Orthopedic Surgeons.

25 Q. What year were you board certified?

1 A. That was in 1974.

2 Q. Were you successful in obtaining your board
3 certification the first time?

4 A. No.

5 Q. How many times did you have to sit before
6 you were successful?

7 A. I passed on the second try.

8 Q. The written part comes before the oral
9 part; correct?

10 A. At that time, no. At that time, we had the
11 oral and the written examination at the same time.

12 Q. So it was all combined together?

13 A. Combined together.

14 Q. And the first time you were unsuccessful in
15 the oral and the written part?

16 A. I really don't know which part I failed.

17 Q. You were unsuccessful, period?

18 A. Yes.

19 Q. Okay. The second time around, you were
20 successful?

21 A. Yes.

22 Q. Okay. Thank you.

23 Because of your interest, doctor, in
24 fracture management, have you endeavored to obtain
25 any specialized training or have you pursued any

1 specialized study to enhance your expertise in
2 fracture management by way of specialized
3 seminars, courses, anything that you as someone
4 interested in fracture management might have
5 available?

6 A. I think any ordinary orthopedic surgeon
7 will endeavor in advancing their skills and
8 knowledge by attending meetings and reading
9 journals and periodicals, but all I can say is
10 that I try. I attend annual orthopedic meetings
11 every year and then I read current journals and
12 books.

13 Q. Do you focus your reading, not exclusively,
14 but primarily to areas of fracture management?

15 A. I always try to read more generous on the
16 subject of fractures. But officially I am a
17 general orthopedic surgeon. I like to be a
18 well-rounded orthopedic surgeon, so I read and
19 attend meetings on all subjects.

20 Q. Okay.

21 A. Even though I mention that I am interested
22 in fracture management, a little more than other
23 subjects --

24 Q. I am implying, perhaps, that because of
25 your interest in fracture management that

1 personally behind closed doors when you do reading
2 in journals and texts, do you look more to
3 journals and texts dealing with fracture
4 management than you do to general orthopedic
5 topics?

6 a. Would you rephrase, please?

7 Q. Sure. I will be happy to do that,
8 We all keep abreast of developments.
9 Lawyers keep abreast of the developments in the
10 law. I trust you keep abreast of developments in
11 orthopedic surgery?

12 A. Yes.

13 Q. And you do that by reading various
14 journals, texts, peer review articles, and written
15 information that is available to you as an
16 orthopedic surgeon; correct?

17 Am Yes.

18 Q. And I presume a lot of stuff comes across
19 your desk on a daily basis, either quarterly
20 journals, textbooks, or newsletters; correct?

21 A. Yes.

22 Q. Do you endeavor to concentrate your study
23 on fracture management articles and texts and
24 journals more than just general orthopedic issues?

25 A. I try to, but I read the articles and

1 journals that come across to me. One journal may
2 contain more fracture subjects at one specific
3 time and the next would be other sports medicine,
4 **so** I cannot read it pinpoint, I cannot really
5 tell.

6 Q. Is it fair to say, though, that you do keep
7 abreast of developments in orthopedic surgery as
8 they relate to fracture management?

9 A. Yes, I do.

10 Q. And what journals **do** you refer to from time
11 to time for information relative to fracture
12 management and techniques that are out there for
13 fracture management?

14 A. Actually there is a new journal which
15 contains exclusively for fracture care. I
16 subscribe, I read regular journals. There is **no**,
17 like you mentioned, there is no journal which
18 contains exclusively fracture matters.

19 Q. Well, as an orthopedic surgeon, doctor,
20 when you want information on surgical techniques
21 for reduction and fixation of forearm fractures,
22 where do you from time to time go for information?

23 A. Well, of course you had the training, four
24 years of training, and then throughout the years,
25 just information appears on the journals or at the

1 meetings and you absorb and you study. I cannot
2 really tell which journal I refer to when I have a
3 fracture of the forearm.

4 Q. What about standard orthopedic texts?
5 Which ones do you refer to from time to time for
6 information relative to the management and
7 treatment of forearm fractures?

8 A. Once in a while I defer to Campbell's.

9 Q. My recollection is there are chapters or a
10 chapter in Campbell's Orthopedics dealing with
11 forearm fractures?

12 A. Yes. I shouldn't say chapter, but it's
13 regarding fractures.

14 Q. Okay. And in that chapter of fractures of
15 the arm, there are discussions relative to the
16 surgical techniques for the reduction and fixation
17 of fractures of arms?

18 A. Yes.

19 Q. And from time to time, you will refer to
20 Campbell's Orthopedics for information on that
21 topic?

22 A. Yes.

23 Q. Okay. Campbell's is certainly considered
24 to be an authoritative text in the area of
25 orthopedic surgery, would you agree?

1 MR. POLITO: What do you mean by
2 authoritative?

3 Q. Do you consider it to be authoritative,
4 doctor?

5 MR. POLITO: Objection. Go ahead,
6 doctor.

7 A. No. It's one of the popular textbooks.

8 Q. Do you consider it to be a good source for
9 information, the area of orthopedic surgery?

10 MR. POLITO: Objection as to
11 form.

12 A. Well, I refer to the book once and awhile.

13 Q. Do you consider it when you refer to it
14 once and awhile to be a good source of information
15 with regard to fracture management and treatment?

16 MR. POLITO: Objection as to
17 form. Go ahead, doctor.

18 A. The problem with this textbook is that this
19 has been published every three years or sometimes
20 later, But by the time this is published, the
21 content and the method already could be outdated a
22 year or so,

23 Q. When you have referred to Campbell's
24 Orthopedics with regard to fracture management of
25 the arm, have you noted in the most recent edition

1 of Campbell's that the techniques are outdated?

2 A. There are some, yes.

3 Q. But some of them are still standard
4 accepted procedures?

5 A. Oh, of course, yes.

6 Q. Okay. So that when you go to it, to the
7 extent that they are standard accepted procedures,
8 you would certainly consider the information in
9 Campbell's to be a good source of information?

10 A. Yes.

11 MR. POLITO: Just objection as to
12 form.

13 Q. You own Campbell's?

14 A. Yes.

15 Q. And it's in your office?

16 A. No. I have it at home.

17 Q. You have it at home, okay. And when the
18 new edition comes out, you purchase the new
19 edition?

20 A. Yes.

21 Q. What other orthopedic texts do you own?

22 A. I have numerous textbooks. I can't really
23 name them.

24 Q. Campbell's is one that you are able to
25 remember without any question?

1 A. Yes.

2 Q. You are not able to identify any of the
3 other names of the ones that you consider to be
4 the top of the list in terms of source of
5 information for you as an orthopedic surgeon?

6 A. I subscribe regularly to journals.

7 Q. Let's talk about those, then. Which
8 journals do you receive on a regular basis in the
9 area of orthopedic surgery?

10 A. JB, Joint and Bone.

11 Q. Joint and Bone, that's the name of it?

12 A. Journal of Bone and Joint Surgery.

13 Q. Again, from time to time, you will refer to
14 that journal for information in the area of
15 fracture management?

16 A. Yes.

17 Q. And that would contain more current
18 information on technique, on standard and accepted
19 techniques in the area of reduction and fixation
20 of fractures than perhaps Campbell's Orthopedics,
21 would you agree with that?

22 A. It depends on the article. Again,
23 sometimes the article can be about a year old.
24 Sometimes we go to the meeting and the papers
25 presented at the particular year's meeting,

1 published a year later, so we notice this quite
2 often.

3 Q. There is also a book called Fractures, I
4 think, by Green and Rockwood?

5 A. Yes.

6 Q. Do you own that book?

7 A. No, I don't.

8 Q. Do you refer to that book from time to
9 time?

10 A. Yes.

11 Q. That's considered a well regarded text in
12 orthopedic surgery with regard to fracture
13 management, is it not?

14 MR. POLITO: Objection.

15 A. I have no opinion on that.

16 Q. Okay. You have, however, referred to it
17 from time to time for information?

18 A. Yes.

19 (Thereupon, a recess was taken.)

20 Q. Doctor, the back of your file, there is a
21 note that says New England Critical Care, or it's
22 a little slip of paper with New England Critical
23 Care embossed on the note pad. Then it says J.T.
24 Knarley and an 800 number.

25 Do you have any idea who that is?

1 A. Yes. This is, I think, the insurance
2 company. That's all I know.

3 Q. So this 271-G080 and the 1006340713, to
4 your knowledge, dealt with some insurance company?

5 A. Yes.

6 - - - -

7 (Thereupon, HUH Deposition
8 Exhibits 1 and 2 were mark'd for
9 purposes of identification.)

10 - - - -

11 Q. Doctor, I am going to show you what I have
12 marked for identification as Deposition Exhibits 1
13 and 2.

14 Can you identify what those two pieces of
15 paper are?

16 A. Those two pages are from my office notes
17 from Kathy Wenzel. They are copies.

18 Q. Are these accurate copies of what actually
19 is the front and back of your office notes?

20 A. Yes.

21 **a.** Now, in your file, you have additional
22 information, and I am just going to narratively
23 describe on the record what you have. I am going
24 to ask Mr. Polito at a later point to just provide
25 me with a complete copy of the file, just so I

1 have it, even though parts of it are excerpted
2 from the hospital, but just so I have that.

3 In addition to the Exhibit 1 and 2, you
4 have copies of cast room reports?

5 A. From St. Joseph, yes.

6 Q. You have a copies of radiological
7 interpretations from St. Joe's and Lorain
8 Community Hospital?

9 A. Yes.

10 Q. You have copies of reports which you
11 generated when requested by certain people, a
12 physician report that was sent, looks like you may
13 have sent a report to an attorney who provided
14 authorization from Kathy Wenzel, and Mr. Janik,
15 and you have several letters that you sent to
16 Kathy Wenzel requesting that she schedule
17 appointments, and a copy of the complaint which
18 has been filed against you.

19 Is that an accurate description of what is
20 in your file?

21 A. Yes.

22 Q. Does Exhibit 1 and 2, doctor, constitute
23 all of your notes, all of the entries that you
24 made when Kathy Wenzel was here in your office?

25 A. That is correct.

1 Q. Any other notes that you would have made
2 relative to Kathy would have been either in the
3 hospital records at Lorain Community Hospital when
4 she had her operation, or your notes in the cast
5 room when you would see her for periodic checkups?

6 A. Yes.

7 Q. Are there any other written entries that
8 you made relative to Kathy Wenzel anywhere else
9 other than what we have just described?

10 A. No.

11 Q. Do you remember Kathy Wenzel?

12 A. Yes.

13 Q. How would you describe her as a patient?

14 MR. POLITO: Objection. That's
15 broad, but go ahead, doctor.

16 A. She was quiet. She was a gentle person,
17 not an aggressive person.

18 Q. I am sorry, not what?

19 A. Not aggressive person, a gentle person. I
20 thought we had a good professional relationship.

21 Q. Was she compliant or noncompliant?

22 A. I thought she was, but at times I was not
23 sure about that.

24 Q. At what times did you feel that she was
25 noncompliant or were you unsure as to whether she

1 was compliant?

2 A. Well, she had a drinking history and when
3 she comes to the cast room office, usually she has
4 alcohol breath, alcoholic breath. But just when I
5 told her to put this electric stimulator on a
6 certain area and for how long, when I saw her at
7 one time, the electric cord was way off from the
8 fracture side. Also, she was not applying for the
9 period of time I had recommended.

10 And at times when she comes, sometimes the
11 fracture position, alignment changes, so I was not
12 sure whether she had an injury or because of her
13 personal habit had an accident or injury.

14 Q. I want to talk to you about what you just
15 said, but I want to find out whether there is
16 anything else in your mind or in your notes that
17 you would raise as an issue concerning the
18 possibility of her being less than fully
19 compliant. Is there anything else?

20 A. No, not at this moment. When we discuss,
21 it may come up, but --

22 Q. And certainly, you have had a chance to
23 look through your records before the deposition
24 today; correct?

25 A. Yes.

1 Q. Okay. If there was any evidence of injury
2 from any external source, whether it be a fall,
3 misuse or what have you by the patient after your
4 surgery, would you agree that it would be
5 important for you as the physician to note that an
6 injury had occurred or that the patient had done
7 something that had caused a misalignment of the
8 fracture sites?

9 MR. POLITO: Objection. Go ahead,
10 doctor.

11 A. Well, I should have, but many times when I
12 rush, it causes, sometimes I omit and that's all I
13 can say. I wish I could do it all the time.

14 Q. Let's talk about Kathy Wenzel and be very
15 specific. Would you agree with me that you make
16 no notations at all during any of the trips to
17 your office or the trips to the cast room that
18 indicate that she appeared to be intoxicated?

19 A. No.

20 Q. But it's your independent recollection that
21 on one or more occasions, she did come with smell
22 of alcohol on her breath?

23 A. Yes.

24 Q. And if that, if her consumption of alcohol
25 in some manner had led to an injury to the arm or

1 likelihood of nonunion?

2 A, Yeah, that is correct.

3 Q. Okay. Doctor, I am going to hand you
4 Plaintiff's Exhibit 12, and I will tell you that
5 this is a film taken at St. Joseph Hospital, just
6 nine days later, August 27, '91. And I want to
7 talk about what you see nine days after the
8 surgery, and whether or not what you see on this
9 film, doctor, nine days later, in your opinion was
10 acceptable, period.

11 Now, just for clarification purposes on the
12 record, is that the August 27, 1991 film from St.
13 Joe?

14 A. Yes, This was taken on August 2nd, '91.

15 Q. It's actually August 27, doctor. There is
16 a 2 and a 7.

17 A. Yes, oh, that's a 27.

18 Q. Okay. On the right-hand side of the split
19 film, what type of view are we looking at?

20 A. This is so-called anterior posterior view
21 or front view of the forearm bone.

22 Q. Okay. And on the left side what type of
23 view?

24 A, This is lateral view or side views.

25 Q. Okay. Now, using the AP view, which is on

1 the right-hand side, the bone that is on the
2 right-hand side of that exhibit, are we talking
3 about the ulna or the radius?

4 A. The right-hand side is radius.

5 Q. Okay. Now, looking at the -- look at the
6 ulna for a moment, if you would. Tell me how many
7 screws you see distal to the end of the fracture.

8 A. From fracture here, I see two screws
9 distally.

10 Q. Now, the screw on the ulna that is most
11 distal, this screw --

12 A. Yes.

13 Q. -- is that screw to you -- does that appear
14 to be migrating or coming out at all?

15 A. No, it doesn't look like it. When a screw
16 hole is made in such a way that when the screw is
17 not going exactly 90 degree or perpendicular, you
18 can see sometimes this kind of small tiny gap. It
19 doesn't mean that it's not all the way down or is
20 loose.

21 Q. Okay. So your testimony again -- and I
22 just want to understand -- is the screw that is
23 most distal on the ulna does not appear to be
24 coming out at all?

25 A. No.

1 some inappropriate use of the arm that worsened
2 the status of her healing, would you agree that
3 that would be something that you as the physician
4 treating the patient ought to note in the record?

5 A, Well, if it was a clear cut problem, I
6 would and I should, I do. But there was sort of
7 assumptions, suspicion -- I don't want to hurt my
8 patients or other people's feelings by writing
9 down.

10 Q. Can we agree then, that you do not have an
11 opinion to a reasonable degree of probability more
12 likely than not that anything that Kathy Wenzel
13 may have done while consuming alcohol contributed
14 to worsening of the healing of her radius and
15 ulna?

16 MR. POLITO: Objection. Go ahead,
17 doctor.

18 A, There is one instance where I record it.

19 Q. When was that, doctor?

20 A. It was on September 27th, '91.

21 Q. In the cast room or in your office?

22 A. The office note on September 27th, 1991.

23 Q. Okay. That my instruction was not to get a
24 cast wet. She apparently got it wet and we told
25 her to dry it with the blow drier, and I think

1 that was one indication that she may have been not
2 compliant.

3 Q. Did that cause her ulna and radius not to
4 properly heal?

5 A. I cannot say that this is the only problem,
6 but she had, she did have extra external
7 immobilization device which was cast, and when
8 this was wet and cast becomes loose or weakened,
9 this can, may contribute loosening or force motion
10 at the fracture site.

11 Q. Okay. Do you hold an opinion to a
12 reasonable degree of probability as to whether
13 that incident on September 27th, 1991 caused a
14 loosening at the fracture site?

15 A. No, I cannot.

16 Q. And again, in fairness to you, doctor, had
17 you felt that getting the cast wet on that one
18 incident was a significant factor in the healing,
19 that's something that you would or ought to note
20 in your records; correct?

21 MR. POLITO: He did note it.

22 MR. MISHKIND: I am saying it was
23 a substantial factor that caused or
24 contributed to the loosening at the
25 fracture sites.

1 nonunion in your opinion in this case?

2 MR. POLITO: Objection as to
3 form. Go ahead.

4 A. If she was using this electric stimulator
5 for more than eight hours every day as
6 recommended, for at least four to six months
7 period of time, my opinion is that she may have a
8 good chance of healing, because there have been
9 reports of success rate of achieving solid union
10 of fractures in nonunion cases probably from 60 to
11 even 80 percent success rate.

12 So I really cannot tell whether she was
13 using properly all the time or not. I just cannot
14 prove it.

15 Q. So, you won't be able to express an opinion
16 one way or another as to whether her use or misuse
17 of the electric bone stimulator caused or
18 contributed to the nonunion; correct?

19 MR. POLITO: Objection. Go ahead,
20 doctor.

21 A. I think it's difficult for me to answer
22 your question that way, because we don't know
23 whether she indeed had used this according to the
24 recommendation or not.

25 If she did use all the time, every day, at

1 least eight hours, properly, then if we trusted
2 reports that we have, she might have had at least
3 60 to 80 percent healing process with the electric
4 stimulator,

5 Q. And you have noted one occasion where you
6 questioned whether she was using the external bone
7 stimulator properly; correct?

8 A. Yes, one occasion where I put a note on my
9 record.

10 Q. No other occasion did you make a notation
11 that would suggest or imply that she was using it
12 improperly or wasn't using it at all; correct?

13 A. Well, a few other things --

14 MR. POLITO: Listen to his
15 question, doctor.

16 A. No.

17 Q. When did you first prescribe the external
18 bone stimulator?

19 A. That was April 7th of '92. That was the
20 date we applied. It doesn't mean that I did not
21 recommend to her, and it's not that we did not try
22 to get it before. I did not dictate that or write
23 on the chart.

24 Q. Okay. It was April of 1992 that it was
25 applied?

1 A. Yes.

2 Q. Okay. So that is --

3 A. About eight months.

4 Q. Do you have any recollection of discussing
5 the use of the bone stimulator prior to April of
6 1992?

7 A. Yes.

8 Q. When did you first start having such
9 discussion?

10 A. I think it's between December -- I think
11 around December of 1991. We discussed other
12 treatment too.

13 Q. Is any of that recorded in your office
14 records?

15 A. No.

16 Q. This is something that Dr. Huh remembers
17 independently?

18 A. Yes.

19 Q. December of [REDACTED] is when the conversation
20 started taking place?

21 A. I believe so.

22 Q. And why did conversations start taking
23 place in December of 1991?

24 A. Because that particular date on December
25 17th, '91, we removed the cast and X-rays were

1 done and at this time it showed some angulation of
2 the fracture site. And screws were loosened and I
3 believe that's when we really, I forcefully
4 recommended her to do something instead of trying
5 to have this healed with a cast application.

6 Q. When you say forcefully tried --

7 A. Sort of, yes.

8 Q. Forcefully tried to persuade her to do
9 something?

10 A. Right, yes.

11 Q. And are you suggesting or implying that she
12 refused to do something?

13 A. Yes.

14 Q. What is it that she refused to do?

15 A. That it was not healing as fast as we would
16 like to see and what I had in mind and recommended
17 to her was to have open reduction with a bone
18 graft, because we are dealing with a delayed
19 union.

20 And the problem was that she did not have
21 insurance. She went through a divorce right after
22 this happened and she could not afford and she
23 said she could not have the surgery.

24 Q. Did you note in your records --

25 A. No.

1 Q. -- that you recommended any type of bone
2 grafting or further surgical intervention?

3 A. No.

4 Q. Did you feel at that particular time, in
5 December of 1991, that based upon the status of
6 her arm from August of '91, when you did your
7 surgery, to December of 1991, that surgical
8 intervention was indicated?

9 A. Yes.

10 Q. That surgical intervention was necessary?

11 A. Yes.

12 Q. That without surgical intervention, the
13 patient was not in all probability going to heal?

14 A. Another second option and recommendation
15 was if you could not afford surgery because of
16 loss of insurance, then why not we try external
17 bone stimulator.

18 Then again, we checked the price and it was
19 prohibitive, so she also did not have it done.

20 Q. Are you saying that she refused surgery and
21 refused the bone stimulator?

22 A. Yes. She just couldn't simply afford.

23 Q. And did you feel at that time without the
24 use of the -- without surgical intervention or the
25 use of bone stimulator that in all probability or

1 more likely than not, her radius and ulna was not
2 going to heal?

3 A. I had doubt that without intervening there
4 was a good chance that we would have a problem,
5 but the best thing I could do was apply a cast and
6 use external immobilization, conventional type of
7 immobilization device to have this fracture
8 healed.

9 Q. When you say the best thing that you could
10 do, the best thing you could do because you
11 weren't going to go ahead and do surgery and you
12 weren't going to use a bone stimulator?

13 A. Yes.

14 Q. You would agree, would you not, that it was
15 far from the optimal measure of treating her
16 radius and ulna as of that time?

17 A. Yes.

18 Q. However, you would agree with me, would you
19 not, that nowhere in your office records do you
20 indicate or suggest or imply that the patient
21 refused the bone stimulator or that the patient
22 refused surgery?

23 A. Yes.

24 Q. And further, there is nothing in the
25 records that indicates that you recommended

1 surgery or that you recommended the bone
2 stimulator, would you agree with that, as well?

3 A. Yes, I do.

4 Q. Okay. Did you take any steps at all to
5 assist the patient -- strike that.

6 You knew that it was in the best interest
7 of this patient to have surgical intervention
8 because there was nonunion or delayed union as of
9 December 1991?

10 A. Yes.

11 Q. And you knew that it was more likely than
12 not that with just use of cast treatment, without
13 one or the other treatment, bone stimulator or
14 surgery, that the outcome was going to be less
15 than what you would consider to be acceptable?

16 A. Yes.

17 Q. Did you take any measures at all, doctor,
18 to assist this patient in obtaining the surgery or
19 in obtaining the external stimulator, the bone
20 stimulator?

21 A. Yes, I did.

22 Q. And what measures did you take?

23 A. Well, she was back to her job, and I asked
24 her if she could afford surgery, but she said no.
25 And again, about this external bone stimulator,

1 still she said no.

2 So, what I did was by the time April
3 arrived, I had in my hand a bone stimulator. So I
4 discussed with her. It was not intended for her,
5 but it was barely used, so I offered it to her and
6 she took it. That's why I applied EBI, which is
7 external bone stimulator.

8 Q. And where did you obtain this external bone
9 stimulator from?

10 A. It was actually for one of my former
11 patients who needed it for delayed healing of
12 fracture. After maybe three weeks or four weeks
13 time of use, then he got another one.

14 The thing is I remember, because this was
15 an industrial injury, and when we applied for this
16 external bone stimulator through Industrial
17 Commission of Ohio it takes a long, long time. So
18 he decided to have it purchased through his
19 private insurance. So he got one.

20 Meanwhile, it was authorized from the
21 Industrial Commission and the new one arrived, so
22 he comes to me, hey, doc, you know, you do
23 whatever you would like to do with this if
24 somebody needs it. So I immediately thought of
25 Kathy and so I did it.

1 Q. But in the meantime between December of '91
2 when you knew that the use of a cast was not going
3 to lead to an acceptable outcome, we then went to
4 April of 1992 without what you would consider to
5 be appropriate management of her fracture?

6 MR. POLITO: Objection. He never
7 said it wasn't appropriate. He said it
8 was less than optimal. Go ahead.

9 A. The only thing I could. I was not happy,
10 but I had to do something. And we both knew that
11 there was no other things that I could do.

12 Q. You certainly didn't note any of this
13 thought process at all in the records; correct?

14 MR. POLITO: Howard, it's been
15 asked and answered.

16 A. A few other things I didn't document
17 either.

18 Q. What other things?

19 A. Like she had a drinking problem and other
20 things.

21 Q. Okay. What else didn't you document in the
22 record?

23 A. That she, well, looked depressed and sort
24 of sometimes was late for the appointment.

25 Q. Did her looking depressed or coming late to

1 the appointments, did that have anything to do
2 with the outcome of this case?

3 A. No. We are discussing about things that we
4 didn't register or dictate, whatever, Sometimes
5 we miss to write or dictate.

6 Q. You would agree that recordkeeping is an
7 important aspect of medical care?

8 A. Yes. I realize that.

9 Q. And that complaints by a patient, as well
10 as findings by a doctor, should be recorded in the
11 records?

12 A. Yes, but over this long period of time when
13 you see every three weeks and almost the same
14 things, repeats, repeats, repeats, then you just
15 lose perspective, I guess.

16 Q. I understand what you are saying, doctor,
17 but you would certainly agree that recommendations
18 with regard to a course of treatment that will
19 help the patient should be recorded in the
20 records?

21 MR. POLITO: Objection. Go ahead,
22 doctor.

23 A. Yes.

24 Q. Kathy had a comminuted and displaced
25 fracture of the ulna and the radius?

1 A. Yes.

2 Q. These are the two large bones in the
3 forearm?

4 A. Yes,

5 Q. Have you treated in the years of practice
6 that you have had here in Lorain County similar
7 fractures?

8 A, Yes.

9 Q. And you undertook to treat this through an
10 open reduction and internal fixation; correct?

11 A. Not all of them.

12 Q. This particular one you did?

13 A. Right.

14 MR. POLITO: Listen to his
15 question and we will get through this a
16 lot quicker.

17 Q. In this particular case, did the open
18 reduction and internal fixation technique that you
19 used have a name?

20 A. Open reduction and internal fixation using
21 compression plate and screws,

22 Q. This is a semi-tubular plate and screws?

23 A. Yes.

24 Q. And you used five screws in a semi-tubular
25 on the radius?

1 A. Yes.

2 Q. And five screws on a semi-tubular plate on
3 the ulna?

4 A. Yes.

5 Q. Commonly in medicine, certain surgical
6 procedures bear the name of the doctor that
7 invented the procedure, or they are as described
8 as the Hauser procedure, for example.

9 A. Yes.

10 Q. Does this particular procedure have a name?

11 A. Yes. This procedure was originally from
12 Europe. ASIF, Association for Studies of Internal
13 Fixation, and this was originated from their
14 group, actually a group of doctors in Europe.

15 Q. And as a consequence of that, when you
16 refer to this type of procedure, what do you call
17 it? Do you call it an AO fixation?

18 A. Some call it AO fixation.

19 Q. What does Dr. Huh call it?

20 A. I call it ORIF with the compression screws
21 and plates.

22 Q. So you use the generic name for it. You
23 just call it what it is, an open reduction
24 internal fixation with compression plate and
25 screws?

1 A. Yes.

2 Q. But you have seen it in the medical
3 literature referred to as an AO fixation?

4 A. Yes.

5 Q. Have you seen it written in the medical
6 literature with other captions or other titles?

7 A. I don't understand your question.

8 Q. Okay, fair enough. You have seen it
9 indicated as an AO fixation; correct?

10 A. Yes.

11 Q. Have you seen it described under a
12 different name, this particular surgical
13 procedure?

14 A. I don't recall.

15 Q. Okay, fair enough.

16 When the AO fixation is done, would you
17 agree that the standard of care requires that the
18 semi-tubular plate be inserted in such a manner so
19 that the screws that you are using have a balance
20 so that there is purchase of the screws on the
21 proximal and the distal end of the fracture sites?

22 A. Yes.

23 Q. Would you agree that when you are using
24 five screws, it would not be appropriate and
25 standard practice to have one screw on one end of

1 the fracture site and four screws on the other end
2 of the fracture site?

3 MR. POLITO: Objection as to
4 form.

5 A. I don't agree with your statement.

6 MR. POLITO: You don't agree,
7 doctor?

8 Q. Tell me why.

9 MR. POLITO: Go ahead.

10 A. Five screws can be used offsetting one
11 screw being further from the fracture site. That
12 does not create any problem, except when it is way
13 off balance, that may create a problem. But five
14 screws has been used and even that AO group used
15 to say that five screws and six holes for the
16 forearm is good.

17 Q. But do you want to have of the five screws
18 into the semi-tubular plate, four of them on one
19 side of the fracture and only one on the other
20 side of the fracture?

21 A. No.

22 Q. That doesn't provide good balance and
23 fixation; correct?

24 A. Correct.

25 Q. That will permit or at least increase the

1 likelihood that there is going to be a nonunion of
2 the fracture; correct?

3 A. Correct.

4 Q. So that when you as the surgeon go in to do
5 the procedure, the standard practice is to make
6 sure that that semi-tubular plate and the
7 associated screws are situated on the bone or at
8 the bone in such a manner that there is good
9 balance on each side of the fracture?

10 A. Yes.

11 Q. Okay. That is your obligation and
12 responsibility as the surgeon to see to it that
13 there is good balance within the semi-tubular
14 plate and screws are inserted?

15 A. When I treated her --

16 MR. POLITO: No, listen to his
17 question.

18 Q. That's your responsibility and obligation
19 as the surgeon; correct?

20 A. Yes.

21 Q. We are going to talk specifically about
22 what you did in a moment. I just want to find out
23 some basic orthopedic surgical matters at this
24 point.

25 A. Yes.

1 Q. Do you have a copy of your operative report
2 in your file?

3 A. Yes.

4 Q. You can keep seated, doctor, because I am
5 going to ask you some questions about it. I have
6 a copy, as well.

7 This surgery was done on August 18, '91;
8 correct?

9 A. Yes.

10 Q. In the description of the operation, about
11 halfway down in your report, you indicate the
12 fracture had occurred just proximal to the
13 incision area of the pronator teres, and under
14 direct vision, anatomical reduction of the
15 fracture fragments was carried out. I am not
16 going to continue to read, but you see where I am
17 at; correct?

18 A. It's insertion area of the pronator teres.

19 Q. So where it says incision area, it should
20 be insertion area?

21 A. Yes.

22 Q. So that's a transcript error?

23 A. Partly my accent, I guess.

24 Q. Other than that, you are at the portion of
25 the operative report that I was referring to;

1 correct?

2 A. Yes.

3 Q. All right. When you say that under direct
4 vision, anatomical reduction of the fracture
5 fragments was carried out, what do you mean as to
6 what you were doing? What were you attempting to
7 accomplish?

8 A. We go into the fracture site and we
9 identify the fracture ends and we also strip off
10 the covering of the bone, which is the periosteum
11 and muscle, and check the fracture clinically.
12 With the naked eye and then bring the major bone
13 fragments together. Sort of put this into the
14 interdigitation of fracture ends,

15 Q. You used the term interdigitation?

16 A. Yes. Or the minor edges of the fracture
17 fragments, realign it and we check all around and
18 I was satisfied that I had a good excellent
19 reduction.

20 Q. And you are able, because this is an open
21 procedure, you are able to visualize that bone
22 fragment?

23 A. Yes.

24 Q. And you are able then, because of the skill
25 and the training that you have, to manipulate the

1 bone to reduce the fracture. In this situation
2 you are dealing with the radius first; correct?

3 A. Yes.

4 Q. After you reduce it and you have the
5 interdigitation or the contact between the two
6 bone fragments, the next step is to fixate that
7 reduced bone?

8 A. No.

9 Q. What is next?

10 A. Then make another incision over the other
11 bone and the same procedure, exposed bone
12 fragments, check the extent of the injury and
13 again reduce it, and then you proceed with putting
14 plates and screws.

15 Q. Okay. So that it's reduction of the
16 radius, reduction of the ulna. Then fixation of
17 the radius and fixation of the ulna?

18 A. Yes.

19 Q. In that order?

20 A. Or the other way around. Either way is all
21 right.

22 Q. But you want to do the reduction of the two
23 fracture sites before you begin the fixation?

24 A. Yes,

25 Q. That's so you don't have cross fixation?

1 A. Not only that. If you reduce one bone and
2 apply plate and screws, then try to reduce the
3 other bone, you may have a difficulty in reducing
4 it.

5 Q. Okay. Now, later on in your operative
6 report, doctor, toward the bottom, you describe
7 the use of the five hole semi-tubular plate and
8 five different size screws were inserted one by
9 one in the appropriate fashion.

10 A. Yes.

11 Q. What I would like you to do is tell me what
12 is the appropriate fashion?

13 A. What we did do is, what I do is, the
14 fracture was reduced in a satisfactory manner.
15 Then hold the plate with the instruments.

16 Q. You hold the plate with an instrument?

17 A. Yes. But before that, we use a template
18 and see how far the end of the plate extends from
19 the fracture site.

20 a. Okay.

21 A. We are looking at it, and we know where the
22 major fracture fragment is. And then we contour
23 it.

24 What I mean is, that because of radius
25 having anatomical bowing, ulna usually straight,

1 so what we do is we have a bendable aluminum type
2 of a thing, template, so we lay over and conform,
3 bend it, and then we use that as a template and we
4 **bend** or twist this plate and we put this plate, of
5 course, we maintain, reduce the bone fragments in
6 place.

7 And the first hole is made a distance from
8 the fracture site. And we don't tighten all the
9 way. And second step is then go to the opposite
10 side of fracture, cross the fracture site and we
11 tighten up.

12 And because of the plate shape and screw
13 head shape made to compress, so we tighten up on
14 both sides. That way we can achieve a one
15 millimeter or even one and a half millimeter
16 compression, and then we drill, tap. Tapping too
17 before, but drill, tap through the hole, and then
18 put side screws.

19 Of course, after we drill, we put that
20 instrument which checks for the proper length for
21 the screw and then we use that one-

22 Q. And you want to make sure when you insert
23 the screw that you have sufficient --

24 A. Purchase.

25 Q. -- purchase of the cortices?

1 A Yes.

2 And then do you continue to move in a

3 distal manner from the fracture?

4 Yes, to the peripheral.

5 To the peripheral end of the semi-tubular

6 plate.

7 A Yes.

8 So in simple terms, if we were to picture a

9 football field, the 50 yard line is where the

10 fracture is. What you are doing is, you start

11 with a screw hole on the 40 yard line on each side

12 of the middle of the football field and then you

13 move to the 30 yard line on each side and perhaps

14 to the 20, depending upon how many screw holes,

15 but you want to have it balanced from the 50 yard

16 line where the 50 yard line is the fracture?

17 A That's correct.

18 Q Okay. I don't know whether it's ever been

19 described that way, but it seems to be a simple

20 way to describe what you have just done or what

21 you are attempting to do.

22 A. Yes.

23 Q Okay. And that's done on the radius and on

24 the ulna?

25 A. Yes.

1 Q. What does post reduction apposition and
2 alignment mean to you as an orthopedic surgeon?

3 A. Would you repeat that again, please?

4 Q. What does the term post reduction,
5 apposition and alignment mean?

6 A. It means that the position and alignment of
7 the fracture fragments after reduction, that means
8 how, where the fracture ends meet together.

9 Q. Okay. Does good apposition of the fracture
10 sites have anything to do with the location of the
11 plate?

12 A. No. He did not mention about the position
13 of the plate.

14 Q. He being the radiologist.

15 A. They are knowledgeable on all aspects of
16 fractures and surgical procedure^s. Not all of
17 them, but they are familiar with orthopedic
18 procedures.

19 Q. Before you complete your surgical
20 intervention on the fractures, is it your
21 responsibility and obligation to make sure^{ed} on
22 the plate and screws are properly position
23 the bone?

24 A. Yes.

25 Q. And in fact, it's your duty and

1 responsibility to make sure that they are properly
2 positioned before you tighten the screws into the
3 bone?

4 A. Yes.

5 Q. Okay. So that if there has to be some
6 adjustment of the position of the plate, you want
7 to do it before you have closed up the patient and
8 left the operating room?

9 A. If the surgeon noted that the fracture was
10 accurately anatomically reduced, and the fracture
11 on clinical examination, there was no other loose
12 fragments or unstable fragments in those days on
13 visible examination of fracture fragments, main
14 fracture fragments are well protected or
15 stabilized, and after we do this reduction and
16 internal fixation and then go through with a range
17 of motion and check stability, if they are stable,
18 then the surgeon should really rely on his
19 clinical judgment at the time.

20 Q. And certainly that clinical judgment that
21 you call into place in assessing the success of
22 the surgery permits you to visualize whether you
23 have placed the semi-tubular plate and screws in
24 the proper anatomical position?

25 A. I thought I did a good job.

you **close** up the patient, you have the responsibility to make sure?

A. Oh, of course.

Q. Is that it is in a good anatomical position; correct?

A. Of course.

Q. And if it's not in a good anatomical position, that increases the likelihood that there is going to be a nonunion of the bone; correct?

A. There is circumstances, when you think that this is a very minor hairline fracture involving, extending beyond or across to the end of the plate with adequate immobilization, external so it immobilization, it just can go on healing, doesn't mean that just because you see tiny hairline fracture, tending proximally or distally close to the plate end, it doesn't mean that it has to **be** done all over.

The reason is, in this particular case, this lady in spite of her size and age, the bone was very, very small, very tiny, and if I did remove the plate and make a screw hole on there,

1 have a disaster. So I thought we had a good
2 fixation, we achieved good stability, and I
3 thought this was really satisfactory.

4 Q. You mentioned something about a hairline
5 fracture. Did you discover something with her
6 radius or ulna after putting the semi-tubular
7 plate in place?

8 A. No. It was way later when we had a repeat
9 x-ray. It's not uncommon to show up the very tiny
10 line a week or two weeks later and when we see at
11 the time of the surgery, we cannot really
12 visualize it. It doesn't show to the naked eye,
13 that's what I am referring to.

14 Q. At the time of the surgery, though, was
15 there any evidence of any hairline fracture or any
16 other fracture, other than the fracture of the
17 radius and the fracture of the ulna?

18 A. I don't recall. I wish we had X-rays, but
19 at that time, I was not sure. I can answer that
20 question.

21 Q. Is it fair to say, though, that at the time
22 that you closed up the patient or completed your
23 orthopedic end of the case, that it's your
24 responsibility and obligation to make sure that
25 that semi-tubular plate and the screws are in

1 proper purchase, proximally and distally to the
2 fracture sites, so as to maintain the reduction of
3 the bone?

4 A. All I can say is that I was comfortable and
5 I was satisfied. I don't know whether with a five
6 hole screw you can exactly balance. That I cannot
7 tell, but I thought it was enough, that it was
8 strong enough.

9 Q. Well, with a five screw hole, you are going
10 to have three on one side and two on the other is
11 the best balance that you can get?

12 A. That is a clinical judgment. You decide
13 which side you place a little more distance and
14 that is clinical judgment.

15 Q. Okay.

16 A. By looking at major fracture fragments and
17 you try to balance and you try not to be too
18 close, what I mean is that first screw hole from
19 the fracture site, not too close to the fracture
20 site, again not too far away, and you have to use,
21 one has to use clinical judgment how to place it.

22 Q. Okay.

23 A. But if your question is, how can you put
24 this five hole screw in perfectly balanced
25 matching way, that, I don't think I can answer

1 that.

2 Q. And that really wasn't my question, but I
3 understand there is clinical judgment in terms of
4 how much purchase you have on each side of the
5 fracture site. It can be adjusted according to
6 what you believe to be adequate?

7 A. Oh, of course. If I thought that it was
8 inadequate, yes, I have done it and I would do it
9 and I do it, but again, this is clinical judgment.

10 Q. And I understand that you are saying
11 clinical judgment, but there is a point where
12 there is at least a minimal amount of purchase
13 that has to be obtained, otherwise there is a high
14 likelihood that the plate that you have inserted
15 at the fracture site will not maintain adequate
16 fixation?

17 A. I agree with you, yes.

18 Q. So that part of it is clinical judgment in
19 terms of the fine tuning of where exactly the
20 plate should go. There are certain basics that
21 you don't have, if top heavy on one side, that 50
22 yard line situation, have part of it just at the
23 45 yard line on one side and the rest of it
24 extending down to like the ten yard line on the
25 other side. That's not appropriate reduction, is

1 it?

2 A. Right, I agree to that.

3 MR. POLITO: Objection as to
4 form.

5 - - - -

6 (Thereupon, HUH Deposition
7 Exhibit 3 was mark'd for
8 purposes of identification.)

9 - - - -

10 Q. Doctor, for the record, we have reviewed
11 the sleeve of films which are from St. Joseph's
12 Hospital in Lorain, Ohio.

13 Did you obtain the sleeve with the X-rays
14 for purposes of the deposition?

15 A. Yes.

16 Q. And to your knowledge, are these original
17 films?

18 A. Yes.

19 Q. Would you agree with me that there is an
20 interpretation of an August 27, '91 film which
21 would represent the first cast room X-ray taken at
22 St. Joseph's Hospital, but yet in the sleeve that
23 we have here today, there is no actual
24 radiological film?

25 A. Yes.

1 Q. Do you know the whereabouts of that August
2 27, '91 film?

3 A. No, I don't have any idea. We got this
4 jacket a few days ago and all we did was reviewed
5 it. And we found that a few films were missing.

6 Q. And did you find that the August 27th, '91
7 film was missing, or did you just learn that as I
8 was putting that up on the view box?

9 A. I don't recall seeing that yesterday.

10 MR. MISHKIND: Mr. Polito, do you
11 have copies of the August 27th?

12 MR. POLITO: As a matter of fact,
13 what I want to do is I want to make
14 copies of all these films. The only
15 films I have are the films that you sent
16 me.

17 MR. MISHKIND: Okay.

18 Q. In any event, right now at St. Joseph's,
19 the first film that we have other than the
20 interpretation is September 3, '91, which I have
21 marked as Deposition Exhibit 3. Would you agree?

22 A. Yes.

23 Q. Okay. What does Exhibit 3 show us?

24 A. It shows AP, anterior posterior and lateral
25 views of the left forearm, including the elbow and

1 wrist joints. And there are fractures involving
2 the mid shaft area of radius and ulna and there
3 are two plates and screws in place.

4 Q. Are these the plates and screws that you
5 inserted at the time of the surgery on August
6 18th, '91?

7 A. Yes.

8 Q. Now, on the left-hand side of Exhibit 3, we
9 have got one view and on the right-hand side we
10 have another view. Which is the AP and which is
11 the lateral?

12 A. The left-hand side showing two distinctive,
13 two forearm bones is the AP view or anterior
14 posterior view and the picture on the right side
15 is side view or lateral view of the forearm.

16 Q. Let's concentrate on the AP view.

17 Which bone is depicted on the left side of
18 the AP view?

19 A. It is the radius.

20 Q. As you look at that film, are you satisfied
21 with the reduction of the radius?

22 A. Yes.

23 Q. Are you satisfied with the fixation?

24 A. Yes.

25 Q. As you look at this film, do you believe

1 that this reduction and fixation as depicted in
2 this X-ray complies with what you understand to be
3 the standard of practice for an AO fixation
4 procedure?

5 A. Yes.

6 Q. Let's talk about the ulna. Is there a
7 fixation?

8 A. Yes.

9 Q. Is that in your opinion acceptable
10 fixation?

11 A. Yes.

12 Q. What about the reduction of the ulna?

13 A. That looks good.

14 Q. That looks good to you, doctor, in your
15 opinion?

16 A. Yes.

17 Q. Now, would you agree with me, doctor, that
18 the location of the fixation device -- strike
19 that.

20 How many screws are there proximally,
21 proximal to the fracture site on the ulna?

22 A. Well, you have to -- well, there are two
23 screws distal to the fracture site. Now, when I
24 reduced, fracture site is right here, between the
25 second from the lower part and the third from the

1 top part. The fracture was here. And then the
2 fracture extends through the middle inside here.
3 And when I see that the surgery, this bone and
4 this one is one fragment, this one is one
5 fragment. So that actually three screws are at
6 the major fracture end.

7 And what you are seeing is there is also
8 fracture line hairline going up like this. That,
9 like I mentioned, a few times in the past, I don't
10 think this should be healed in time.

11 Q. Did it heal in time, the one that's
12 proximal?

13 A. No, I don't think so. I think that's why
14 we had a problem.

15 Q. So you believe that the line which shows up
16 on X-ray on September 3, 1991, which is the area
17 with the most proximal screw, is the area where
18 the nonunion developed?

19 A. Yes.

20 Q. Okay. And it's your testimony that as you
21 look at the film of September 3, 1991, and you
22 look at the fixation and you look at the position
23 of the screws, and you look at the amount of
24 cortices that are involved with regard to the
25 screws, all of this in your professional opinion

1 represents standard and acceptable orthopedic
2 surgical reduction and fixation?

3 A. Yes, as of this time, yes.

4 Q. And do you believe that this fixation and
5 reduction, as shown on this September 3, 1991
6 film, which would represent about two weeks
7 postoperative, that this would be something that
8 would be acknowledged reduction and fixation in
9 standard medical texts?

10 A. Yes.

11 Q. And you would find support for this if you
12 looked in Campbell's Orthopedics?

13 MR. POLITO: Objection. Go ahead,
14 doctor. If you recall,

15 A. Campbell's textbook doesn't describe this
16 kind of thing. It's just the general principle.
17 Every fracture is different. Every fracture has
18 different characters and personalities and we have
19 to treat differently. As of now, I was
20 comfortable.

21 Q. As of September 3, 1991, were you seeing
22 evidence of a complication following the surgery
23 of August 18, 1991?

24 A, I would not call it complication at all.

25 Q. You would call this what you reasonably

1 anticipated seeing two weeks after performing the
2 surgery?

3 A. I was comfortable with what I have done.

4 Q. So your testimony is you were comfortable
5 with the surgical procedure that you used and as
6 you look at the September 3, 1991 film, you did
7 not have any concern whatsoever as to the
8 integrity of the Eracture lines or the probability
9 that the patient would heal?

10 MR. POLITO: That's a couple
11 multiple questions there.

12 Q. Were you satisfied at that point with the
13 integrity of the reduction and fixation of both
14 fractures?

15 MR. POLITO: I think he already
16 indicated yes.

17 A. Yes, I said yes,

18 Q. And were you satisfied that there was a
19 probability that based upon what you were seeing
20 as of September 3, 1991, that the patient, to a
21 reasonable degree of probability, would heal
22 without a nonunion?

23 A. I felt comfortable that this would go on
24 probably healing, especially when we had external
25 cast fixation.

1 Q. And certainly with the external cast
2 fixation, there would be nothing that the patient
3 would have done between August 18, 1991 and
4 September 3, 1991 that would have caused any of
5 your work at the time of surgery to become undone?

6 A. No.

7 - - - -

8 (Thereupon, HUH Deposition
9 Exhibit 4 was mark'd for
10 purposes of identification.)

11 - - - -

12 Q. Doctor, I am going to mark the December 17,
13 '91 X-ray from St. Joe's as Exhibit 4.

14 MR. POLITO: There is two from
15 12-17-91.

16 MR. MISHKIND: Two sheets?

17 MR. POLITO: Yes.

18 MR. MISHKIND: Would you prefer to --

19 MR. POLITO: I just don't want --
20 well, it's been marked, so don't worry
21 about it. I wasn't thinking, so go
22 ahead.

23 Q. I recognize in the sleeve that there is
24 another film for December 17th. We can easily put
25 that one up as well. But my question to you is,

1 this is the film where you indicate that th
2 screws have loosened and what caused the loc
3 of the screws?
4 A. I really can't answer. Meanwhile we
5 shortened the cast to give her motion exercise of
6 the elbow.
7 Q. Does a short arm cast increase the
8 likelihood that screws will loosen?
9 A. It will allow rotation of the forearm and
10 it may, when there is no solid fixation, it may
11 contribute to loosening of the plate and screws.
12 Q. So if one is uncertain as to whether there
13 is a solid fixation, it would be inappropriate to
14 use a short arm cast?
15 MR. POLITO: Objection.
16 Q. Correct?
17 A. No. I want to make sure that she does not
18 end up getting stiff elbow, so as a precautionary
19 measure, I shortened so she could move the elbow.
20 Q. Well, let's go through the films, just so
21 we don't miss the sequence of events.
22 I will take down the September 3 film and
23 if you would put up what you believe to be the
24 next film in sequence.
25 - - - -

1 (Thereupon, HUH Deposition
2 Exhibits 5 and 6 were mark'd for
3 purposes of identification.)

4 - - - -

5 Q. We now have Exhibits 5 and 6. Are these
6 the December 25, 1991 films?

7 A. Yes.

8 Q. Maybe it's September 25.

9 As you look at the September 25, 1991
10 films, were you satisfied that the reduction that
11 you believe you had achieved at the time of the
12 surgery was maintained?

13 A. Yes.

14 Q. Was there any loss of reduction or any
15 change in anatomical position?

16 A. No, not at all. Especially the ulnar, we
17 can see the major fracture fragment here is right
18 at the center of the plate here.

19 In this view, we don't see the tiny
20 hairline fracture lines we used to see and I
21 thought it was healing at the time.

22 Q. You were satisfied then with the reduction
23 and the fixation?

24 A. Yes.

25 Q. As of September 25, '91?

1 A. Yes.

2 Q. What about on the lateral view?

3 A. Again, the plates and screws in place and I

4 was comfortable and I did not do anything

5 different, except cutting short the cast and the

6 exercise,

7 Q. So at this point on September 25th, you put

8 her into a short arm cast?

9 A. Yes. The cast was shortened and I advised

10 her to start moving the elbow.

11 Q. Is this the first time that she had had a

12 cast below the elbow?

13 A. Yes,

14 Q. Prior to that, it had been what, halfway up

15 the humerus?

16 A. Yes, it goes up there.

17 Q. Not all the way up to the shoulder, but

18 just to the mid humerus?

19 A. The mid part of the arm, humerus, yes.

20 Q. Okay. Let's go on to the next film,

21 doctor. What is the next film that you have?

22 A. It was October 15.

23 Q. And you have two films for October 15th?

24 A. Yes.

25 - - - -

1 (Thereupon, HUH Deposition
2 Exhibit 7 was mark'd for
3 purposes of identification.)

4 - - - -

5 Q. Or one film?

6 A. One film.

7 Q. And we put an exhibit sticker number 7 on
8 the October 15th film. Were you satisfied with
9 the healing?

10 A. Yes. On AP view, we can see that fracture
11 line is being obliterated here. It's fuzzy here
12 and here, and also I thought that there was a
13 fairly good healing on the ulna side. If you see,
14 this is fuzzy and the line is much less distinct
15 than before.

16 And the front view looked okay, but at this
17 time on the lateral view, my concern was that she
18 is developing a little bowing there, so I said,
19 you know, we should not do it, she didn't accept
20 it, so I put a long arm cast at this time.

21 Q. On the lateral view, you saw some bowing?

22 A. Yes, very subtle.

23 Q. Now, on October 15th, would you read to me
24 what you said in your --

25 A. Repeat X-rays. Some more healing in slight

1 angulation. Long arm cast applied, recheck in two
2 weeks.

3 Q. When you say slight angulation, is that the
4 bowing?

5 A. Yes.

6 Q. You said she said something. She being
7 Kathy?

8 A. Yes.

9 Q. What did she say?

10 A. What did I say?

11 Q. I thought you referenced her in your
12 discussion. Did she request something to be done
13 at that point?

14 A. No .

15 Q. You put back on the long arm cast?

16 A. Yes.

17 Q. Because of this bowing or this angulation?

18 A. Yes.

19 Q. What was your concern at that point as to
20 what was developing?

21 A. That she might be doing too much when the
22 cast was shortened below the elbow, allowing too
23 much motion at the fracture site.

24 Q. The next film. Is that October 29th?

25 A. Yes.

1

- - - -

2

(Thereupon, HUH Deposition

3

Exhibits 8 and 9 were mark'd for

4

purposes of identification.)

5

- - - -

6

Q. We have two films for October 29th,

7

correct?

8

A. Yes.

9

Q. And we now have Exhibits 8 and 9, which

10

represent October 29, '91. Tell me, if you would,

11

whether you were satisfied with the fixation and

12

the alignment?

13

A. The alignment looks real good, The

14

position looks good. But what I noticed here was

15

that fracture of the radius shows a lot more

16

healing. The fracture before, the line was very

17

distinctive, like a V line, a letter V type and

18

now we see a lot of obliteration and the fracture

19

lines are very fuzzy now, so I was happy with the

20

progress. And then again on the ulna side, this

21

looks again like progressive healing.

22

Q. Were you satisfied with how things looked?

23

A, Oh, yes,

24

Q. What did you write on October 29th in your

25

note?

1 A. That we check examination of the X-rays.
2 Good alignment, but no healing yet. What I meant
3 was not complete healing yet, but there is
4 progressive obliteration of fracture lines visible
5 here.

6 Q. Was she at a stage as of October 29, 1991
7 in your professional opinion that that was
8 acceptable to you based upon the surgery that you
9 had performed on August 18th?

10 A. Of course. And the lateral view, we can
11 see that the alignment is good. There is no
12 bowing.

13 Q. The next film is Exhibit 10, which is
14 November 26, 1991.

15 - - - -

16 (Thereupon, HUH Deposition
17 Exhibit 10 was mark'd for
18 purposes of identification.)

19 - - - -

20 Q. Doctor, on this occasion, were you
21 satisfied?

22 A. Yes, again, I was actually more satisfied,
23 because we see less distinctive fracture lines
24 every time she comes now and it's fuzzier and
25 fuzzier. And even on the lateral view, this is

1 all knitting now, I would describe it as knitting
2 of fracture. There is continuity established and
3 there is the healing process going on, so I was
4 satisfied.

5 Q. As far as the position of the screws and
6 the number of cortices that were involved, is it
7 your testimony that all of this was well within
8 accepted standards?

9 A. Yes. Again, we go back to the issue that
10 major fracture line was right in the middle of
11 screw here. This fracture --

12 Q. Which bone are you referring to?

13 A. The ulna. The one we are discussing
14 before. And the fracture we had was longitudinal
15 or going along the axis, within the axis of the
16 ulna, and then going side ways, and then there was
17 a very faint hairline before.

18 Right now, it looks like the fracture of
19 the particular area seems to be all healed up, or
20 almost healed up.

21 Q. Okay.

22 A. So I had no concern at all at this time.

23 Q. Okay.

24 A. And I was happy. And then again I was
25 concerned of her mobility, so I cut down the cast

1 below the elbow.

2 Q. So you were happy such that the bone was
3 showing good position so that you felt that you
4 could confidently cut down the cast --

5 A. Yes.

6 Q. -- to allow mobility?

7 A. Yes.

8 Q. If you did not have sufficient reduction
9 and fixation, you would not have cut down the
10 cast; correct?

11 MR. POLITO: Remember what he said
12 earlier. He said you are worried about
13 the elbow stiffness, so I think he has
14 already answered that question, but go
15 ahead.

16 A. Even if the fracture is not completely
17 healed, during the healing process we usually like
18 to consider the function of the limbs involved at
19 a later date, so it is not uncommon to start
20 rehabilitation during the active part of
21 treatment, so I had to be concerned about late
22 effect of the major joint, so I cut down. I don't
23 deny that there was not complete healing.

24 MR. MISHKIND: At this point it's
25 my understanding that the doctor has a

1 commitment that he has to get to at the
2 hospital. It's now 11:30.

3 What we are going to do is adjourn
4 the deposition and we will reconvene,
5 hopefully sooner than later, and we will
6 also make arrangements so that we have
7 all of the films.

8 MR. POLITO: That's fine.

9 MR. MISHKIND: In addition to
10 adjourning the deposition, we also agreed
11 that Mr. Polito will take with him the
12 original films from St. Joe's, which we
13 already realize are not all of the films;
14 the very first film in the cast room not
15 being present. But we know we have 13
16 films from St. Joe's.

17 John is going to take them and he
18 is going to duplicate them, making a copy
19 for me and a copy for himself and then
20 returning the films to Dr. Huh for use at
21 the next deposition and then
22 ultimately back to the hospital.

23 And as far as Dr. Huh's films,
24 there are three films from your office
25 that I would like to have copies of that

1 John ~~is~~ going to take with him, as well.

2 MR. ~~POLITO~~: Could I ask a favor
3 of you? I would like to get the films
4 from Lorain Community Hospital, at least
5 copies of the copies that you have.

6 MR. MISHKIND: I will call my
7 expert.

8 (Deposition adjourned at ~~11:30~~
9 o'clock a.m.)

MR. HERSCH: We are on the
record.

JUNG HUH, M.D., a witness herein,
called for examination, as provided by
the Ohio Rules of Civil Procedure, being
by me first duly sworn, as hereinafter
certified, was deposed and said as
follows:

EXAMINATION OF JUNG HUH, M.D.

BY-MR. MISHKIND:

MR. MISHKIND: Please let the
record reflect that this is the
continuation and hopefully the conclusion
of the deposition of Dr. Huh.

The deposition had begun on August
19, 1994. It has been rescheduled on a
number of occasions due to scheduling
problems; that the deposition is being
taken, at least the conclusion of the
deposition is being taken both by

1 stenographic and by videotape means and
2 that a notice to take deposition had been
3 issued to Mr. Polito advising him of
4 plaintiff's intention to take the
5 deposition both by videotape and by
6 stenographic means.

7 BY-MR. MISHKIND:

8 Q. Doctor, you know I am Howard Mishkind. We
9 met previously for several hours and talked about
10 Kathy Wenzel.

11 A. Yes.

12 Q. Since we were together last, which was on
13 August 19, 1994, have you had a chance to read
14 over your deposition?

15 A. No.

16 Q. Have you ever seen the transcript of your
17 deposition, sir?

18 A. No.

19 Q. Okay. Did you know that it had been
20 transcribed?

21 A. I did not know it.

22 Q. I have a booklet here with your
23 deposition. You have not been provided with
24 anything similar to this?

25 A. No, not at all.

1 Q. Okay. I take it then, doctor, you can't
2 tell me whether there is anything in the
3 deposition transcript that needs to be corrected
4 or modified, because you haven't read the
5 deposition; correct?

6 A. Correct.

7 Q. Okay. Recognizing that, though, I am going
8 to ask you whether there is anything that stands
9 out in your mind -- obviously, independent of
10 having read of the deposition, but is there
11 anything that you recall having said in the
12 previous deposition that at this point you want to
13 say, Mr. Mishkind, I need to correct what I said,
14 what I said before was incorrect, it needs to be
15 changed or modified?

16 Is there anything you can think of
17 independently at this point?

18 A. I cannot answer your question because I did
19 not have a chance to review the transcription. It
20 has been fairly long and I really can't think of
21 anything that I should have corrected or --

22 Q. There is nothing that you can think of
23 independently that needs to be corrected?

24 A. At this time, no.

25 Q. Fair enough.

1 Now, since the deposition, have you
2 reviewed in any greater detail the Suburban
3 Community Hospital records for the surgery that
4 was performed by Dr. Jeffrey Morris back in March
5 of 1993?

6 A. No.

7 Q. Okay.

8 A. I was not provided with documents provided
9 by the doctor.

10 Q. Okay. Mr. Polito did not provide you with
11 copies of any of Dr. Morris' operative reports or
12 any of the X-rays from his surgery?

13 A. He just showed me once and we just glanced
14 over the room light. That's about it. We did not
15 discuss or he did not provide any medical records
16 or operative notes.

17 Q. Have you had occasion to talk to Dr. Morris
18 about Kathy Wenzel at any time?

19 A. No.

20 Q. Do you know Dr. Morris?

21 A. I'm not sure. I don't think so.

22 Q. Dr. Morris is an orthopedic surgeon on the
23 east side of Cleveland affiliated with Beachwood
24 Orthopedics. Do you know any of the doctors that
25 are affiliated with Beachwood Orthopedics?

1 A. No.

2 Q. Okay. Thank you.

3 We are going to move into specifics on
4 Kathy Wenzel and then finalize the deposition. In
5 fact, we have to be in court this afternoon on the
6 case. So I am not going to go over things that we
7 have already discussed previously, or at least I
8 am not going to intentionally do that, I assure
9 you of that.

10 I do want to ask you whether you have
11 reviewed anything, doctor, that you believe to be
12 relevant to the Kathy Wenzel case since we were
13 last together by way of any medical records or
14 medical literature; anything that you believe to
15 be relevant to this case, sir.

16 A. I have read new journals and also reviewed
17 other articles, not specifically for Kathy Wenzel,
18 but those are all related to traumas and other
19 orthopedic surgeries.

20 Q. I'm sorry. Repeat that. Those are what?

21 MS. O'BRIEN: Related to trauma
22 and other orthopedic surgeries.

23 A. Trauma and other orthopedic problems.

24 Q. You didn't review those with specific
25 reference to Kathy Wenzel, though, did you?

1 A. Well, not particularly, keeping in mind we
2 got this case, but I have read articles.

3 Q. Are there any articles that you read that
4 you believe support the method or manner in which
5 you did your reduction in fixation in Kathy
6 Wenzel's case?

7 A. No, I can't recall any specific articles.

8 Q. Okay. Did you see any references in any of
9 the literature that you may have viewed since our
10 last deposition that in any way indicates that the
11 choice of the plate and screws for the type of
12 fracture that Kathy Wenzel had was appropriate?

13 A. Again, I reviewed the articles, but not
14 specifically for this type of plate and screws.

15 Q. Okay. So is it fair to say that there is
16 nothing that you saw in the literature that
17 supports or says that what you did in the Kathy
18 Wenzel case was appropriate?

19 MS. O'BRIEN: In the literature
20 that he has reviewed since you last
21 deposed him?

22 MR. MISHKIND: Correct.

23 A. Well, you are asking me whether -- would
24 you mind repeating your question again.

25 Q. Not at all.

1 With regard to anything that you have
2 reviewed in the literature, is there any article
3 section in a text, section in a chapter that you
4 came upon since the time of our last deposition
5 that in any way supports the surgical approach,
6 the orthopedic management of Kathy Wenzel's
7 fractured radius and ulna in her arm?

8 A. No. I did not review any specific article
9 on this subject matter.

10 Q. Okay. As you sit here today, recognizing
11 that you may not have gone through the Suburban
12 records with the kind of detail that you might
13 otherwise want, but do you have any criticism, Dr.
14 Huh, of the method or manner of treatment provided
15 by Dr. Morris to treat the nonunion or the
16 malunion of the fractures?

17 MS. O'BRIEN: Objection. Asked
18 and answered at the last deposition. You
19 may answer.

20 A. I don't think it's a fair question, because
21 I have not reviewed his records. I cannot answer
22 that.

23 Q. As you sit here right now, though, can you
24 voice any specific criticism of Dr. Morris based
25 upon anything that you have reviewed?

1 A. I cannot say anything because I don't know
2 what he has done to her and I can't answer your
3 question.

4 Q. Okay, You reviewed your records just
5 preparatory or prior to the deposition today;
6 correct?

7 A. Yes.

8 Q. Okay. We had talked in December -- or when
9 we took your last deposition, we had talked about
10 that by December of 1992 that you were concerned
11 about the fixation and the reduction that existed
12 in the ulna and the radius in Kathy Wenzel's arm;
13 correct?

14 MS. O'BRIEN: Are you talking
15 about December of '91 or December of '92,
16 Howard?

17 MR. MISHKIND: I'm sorry, December
18 of '91. I wanted to see whether you were
19 awake or not.

20 MS. O'BRIEN: I won't be for
21 long,

22 MR. MISHKIND: Okay. I'm trying.

23 Q. Excuse me, doctor, I meant December of
24 '91. Remember we talked about at that point in
25 December of '91 you were considering the use or

1 you felt that either surgical intervention or a
2 bone stimulator was necessary?

3 A. Yes.

4 Q. Correct?

5 A. Yes, that's correct.

6 Q. Okay. Would you agree, doctor, more likely
7 than not, that as of December of '91, based upon
8 what you saw on X-ray and your clinical findings,
9 that Kathy Wenzel was going to need to be operated
10 on regardless of the success of any bone
11 stimulator?

12 MS. O'BRIEN: Objection. I think
13 this area was inquired into at his last
14 deposition, Howard. I was under the
15 impression we were just finishing up with
16 the X-rays, so --

17 MR. MISHKIND: With all due
18 respect, I don't believe it was, and
19 again I am not intending to go into areas
20 that have been inquired upon.

21 A. Would you repeat the question again.

22 Q. Sure. As of December 1991 --

23 A. Yes.

24 Q. -- would you agree more likely than not
25 that Kathy Wenzel was in need of surgical, further

1 surgical intervention regardless of the success of
2 the bone stimulator?

3 A. If the bone stimulator is working and
4 creating some bone formation, the surgery is not
5 necessary.

6 Q. Would you agree that in order for the bone
7 stimulator to be effective, that there has to be
8 rigid fixation of the bones?

9 A. Well, you just can't categorically say that
10 there has to be a rigid fixation to have this bone
11 stimulator be effective. Sometimes there is no
12 rigid internal fixation, just a cast or other
13 forms of external mobilization, plus bone
14 stimulator can be effective.

15 Q. I am talking about when you have an
16 internal fixation, knowing in December of 1991
17 that you did not have rigid fixation of the bone --

18 A. Well, that is not, again, a true
19 statement. We had good rigid internal fixation
20 when we did the surgery and we don't know what
21 happened, but it became sort of angulated and one,
22 maybe two screws became loose, but we really don't
23 know what happened. We are not saying that to
24 start with that it was not rigid internal
25 fixation. I don't think it's a fair statement.

1 Q. In December of '91 --

2 A. Yes.

3 Q. -- when you started thinking about the use
4 of a bone stimulator, you knew, did you not, that
5 you did not have adequate fixation of the
6 fractured bones. For whatever reason, it was not
7 adequate as of December, 1991?

8 A. Yes, as of December, yes, there was some
9 angulation of bone fragments.

10 Q. Okay.

11 A. Even though there has been a healing
12 process going on slowly, and then I thought that
13 she needed the further procedures, either surgery
14 or external bone stimulator. My first choice was
15 surgery.

16 Q. Okay. Can, doctor, a bone stimulator be
17 effective where a patient has angulation of the
18 bone where the patient does not, in your
19 professional opinion, have adequate fixation of
20 the fractured bones?

21 A. Sure, yes.

22 Q. Okay. Is that supported in any of the
23 medical literature that you consult from time to
24 time?

25 A. There are numerous articles, even in

1 nonunion case, with a bone stimulator applied, in
2 time, bone in 70 percent healing rate documented
3 and reported in many, many literatures.

4 Q. Even where there has been an open reduction
5 internal fixation and for whatever reason the
6 fixation is not deemed to be adequate?

7 A. Sure.

8 Q. Okay. Can you cite me to any texts or any
9 articles that you know of that support that
10 position?

11 A. Oh, there are many. I cannot offer any to
12 give you, but it is a well-known common knowledge
13 among orthopedic surgeons.

14 Q. So that it would be -- I recall that one of
15 the texts that I believe you indicated that you
16 own and consult from time to time is Campbell's
17 Orthopedics; correct?

18 A. Yes, I think I mentioned that, yes.

19 Q. Okay. And do you believe that it would be
20 referenced in Campbell's Orthopedics, that use of
21 bone stimulators, even in the face of a fractured
22 ulna or fractured radius that does not have rigid
23 fixation is effective?

24 A. I don't think Campbell's Orthopedics
25 mentioned that. I don't think so.

1 Q. Where would you look specifically if you
2 wanted to get information to support this
3 position?

4 A. Well, common orthopedic journals.

5 Q. Such as?

6 A. Periodicals. Even throw away journals off
7 and on have this report.

8 Q. What are some of the common orthopedic
9 journals that you as an orthopedic surgeon would
10 look to?

11 THE WITNESS: Should I give him --

12 MS. O'BRIEN: He knows that you
13 can't cite him to any specific text.

14 THE WITNESS: Right. At this time
15 I can't.

16 MS. O'BRIEN: -- or book or
17 article, but if you have a list of
18 journals that you refer to from time to
19 time, which I think you have already
20 given Mr. Mishkind in your first
21 deposition, you can go ahead and repeat
22 that list. I don't know exactly what
23 that list was, but --

24 A. It's JBJS and orthopedic journals.

25 Q. Journal of Joint --

1 A And Bone.

2 Q and Bone Surgery?

3 A And Bone Surgery, yes,

4 ^ Okay. So you would consult the journals
5 that we talked about during your first deposition,
6 you believe that those journals would have support
7 for the position that we are just talking about?

8 A Yes

9 ^ Okay. In your first deposition, you told
10 me that had she used the electrical stimulator,
11 the bone stimulator for eight hours a day for a
12 period of four to six months, that there was a 60
13 to 80 percent success rate, statistically that you
14 are aware of, of achieving a solid union of
15 fractures in nonunion cases. Do you recall giving
16 me those statistics? It would have been on page
17 41 of your deposition.

18 A Yes, I believe so.

19 ^ Okay. Can you tell me doctor, again, where
20 you believe those statistics are memorialized,
21 what texts or what journals would have that
22 support?

23 MS. O'BRIEN: Well, I am going to
24 object

25 I mean, first of all, this has all

1 percent.

2 Now, if your answer is that the 60
3 to 80 percent success rate is set forth
4 in the texts which you previously cited
5 to me to be authoritative, then, fine,
6 I'll accept that. If you are referencing
7 some specific text or article when you
8 gave me that percentage, that's what I
9 would like to know.

10 MS. O'BRIEN: Well, he didn't cite
11 anything as authoritative, but if you can
12 answer Mr. Mishkind's question in terms
13 of if there is a specific cite that you
14 know of that refers to these percentages,
15 go right ahead.

16 A. First of all, there is not one, only one,
17 like you said.

18 MR. HERSCH: Off the record.

19 (Pause.)

20 MR. HERSCH: Back on the record.

21 A. First of all, there is no one single
22 authoritative paper on that, but there are
23 numerous, many articles. And I cannot pinpoint.
24 It's not that I'm trying to avoid you, you know,
25 your question.

1 Q. Can you tell me one or two of the better
2 sources that you consider that would have the
3 statistics or support the statistics that you
4 previously cited?

5 THE WITNESS: Off the record.

6 MR. MISHKIND: No, doctor.

7 THE WITNESS: Could I check with
8 her first?

9 MR. MISHKIND: Pardon me? You want
10 to talk to your attorney first?

11 MS. O'BRIEN: You have already
12 answered the question. You have already
13 told him you can't cite him to a specific
14 reference, so, you know, you can just
15 tell Mr. Mishkind that again and we can
16 move on.

17 MR. MISHKIND: Well, no, that's
18 not accurate. I asked you whether --
19 Q. You said that there is no one particular
20 source.

21 Can you cite me to one or two of
22 the sources that you consider to be the
23 better sources that you know have the
24 statistics that we previously talked
25 about in terms of 60 to 80 percent

1 success rate? If you can't, then simply
2 tell me that you can't and we will move
3 on.

4 A. Yeah, I cannot really remember specific
5 articles.

6 Q. Okay. Do you have any literature at all in
7 your file?

8 A. No.

9 Q. Okay. Doctor, would you agree that the
10 likelihood of achieving a solid union of the
11 fractures was significantly less by December of
12 1991 because there had already been displacement
13 and the screws and the plates have loosened, at
14 least according to the X-rays that we looked at
15 previously, which if you recall in October of '91,
16 we talked about that there was some displacement.
17 Would you agree with that?

18 A. Would you repeat your question?

19 Q. I would be happy to. *

20 Would you agree that the likelihood of
21 achieving solid union of the fracture was
22 significantly less by December of '91 because by
23 that time there had already been displacement and
24 the screws and the plates had loosened?

25 A. Yes.

1 Q. Would you agree that with the plates and
2 screws having loosened, that it was more likely
3 than not going to require removal and replacement
4 and grafting at some particular point in the
5 future?

6 A. Yes.

7 Q. Okay. You used a five hole screw plate;
8 correct?

9 A. Yes.

10 Q. Why did you use a five hole screw plate in
11 this case?

12 A, Well, when I did surgery, I saw the size of
13 the fracture line and the size of the bone, and I
14 laid out the template, and there was adequate,
15 And when we had the training and when we had this
16 literature available, indicated that for the
17 forearm fractures, five hole screw is the minimum
18 size, and then I used it. I thought this was
19 adequate for her at the time of the surgery.

20 Q. Okay. We can agree that the minimum size
21 plate that would be used for a forearm fracture is
22 exactly what you used?

23 A. Yes.

24 Q. Okay. There are larger plates, are there
25 not?

1 A. Of course.

2 Q. And the larger the fracture, the larger the
3 plate; correct?

4 A. Yes.

5 Q. You had available to you at the hospital
6 plates larger than five hole plates; correct?

7 A, Yes.

8 Q. And certainly there was nothing preventing
9 you from having used a five hole, a plate larger
10 than five hole on that particular day --

11 A. Yes.

12 Q. -- was there? Nothing preventing?

13 A. Nothing.

14 Q. Okay. Now, you told me a moment ago that
15 you can have some benefit or healing using a bone
16 stimulator, even if you don't have rigid
17 fixation. That's what we have talked about a
18 little while ago?

19 A, Yes.

20 Q. Can we at least agree that if the bone is
21 not rigidly fixated that the effectiveness of the
22 stimulator is reduced?

23 A, If there is a constant motion, I should say
24 gross motion, even with a cast or even with some
25 other forms of fixation, there can be micro motion

1 or a small amount of motion, but without having
2 gross exaggerated, you know, force motion at the
3 fracture site with external bone stimulator, like
4 I mentioned before, external bone stimulator can
5 be effective.

6 Q. Would you agree that the more -- strike
7 that.

8 Would you agree that the less rigid the
9 fixation, the greater potential there is for
10 movement of the bone fragments?

11 A. I believe so.

12 Q. And that the less rigid the fixation, the
13 less effective that bone stimulator is going to
14 be?

15 A. Yes.

16 Q. Okay. And would you agree that if you
17 don't see progress with the bone stimulator after
18 a certain period of time that other options have
19 to be explored?

20 A. Yes.

21 Q. Okay. And is there a standard that you
22 follow or that you are aware of in terms of a
23 maximum period of time that you would use a bone
24 stimulator on a patient who has evidence of plates
25 and screws having loosened and some angulation of

1 the bone having already occurred?

2 A. I don't understand your question.

3 Q. Fair enough. We know that you used a bone
4 stimulator in this case and we know further that
5 you knew when you used a bone stimulator that
6 there had already been some angulation of the bone
7 and the screws; some of the screws had loosened;
8 correct?

9 A. Well, for your question, using of this
10 bone, external bone stimulator was my second
11 choice.

12 Q. I understand that, doctor.

13 A. Right.

14 Q. And I am not talking about --

15 A. Number two --

16 MS. O'BRIEN: Let him finish.

17 A. Number two, there was angulation at -- in
18 December, so we corrected it. We manipulate it
19 and we put the cast and we have other X-rays and
20 there was decent. It was not grossly angulated and
21 it's not unacceptable.

22 Q. Okay. We will talk about what you did in
23 December in a moment.

24 A. Yes.

25 Q. My question to you, however, was if you

1 have angulation and you know that the screws have
2 come loose, is there a period of time that you
3 will continue to use the bone stimulator a maximum
4 of before which you will proceed to explore other
5 options of treatment?

6 A. It was not, we set maximum period of time
7 for the usage of external bone stimulator. I had
8 recommended to her to have surgery with the bone
9 recommended to have surgery with the bone --
10 excuse me, bone grafting, but she, by this time,
11 lost her insurance and she did not want to have
12 the surgery; so I just couldn't help her, except
13 using the best choice to help her.

14 Q. What is the maximum period of time?

15 A. The maximum? There is no set maximum. The
16 recommended usage of this bone stimulator is at
17 least three months, sometimes they use six months,
18 sometimes longer than that.

19 Q. So certainly in December of '91, you knew
20 that the use of the bone stimulator was the least
21 efficient option available in terms of treating
22 her problem; correct?

23 A. I should say second effective method.

24 Q. Most effective being surgical intervention?

25 A. Yes.

1 Q. Okay. And certainly as of December '91,
2 you knew that the surgery that you had done in
3 August of 1991 had failed to accomplish its
4 intended purpose?

5 A. Well, for about six months time, if the
6 fracture doesn't heal, then we usually record
7 delayed union. Then we are worried and we try to
8 do every efforts to make this particular fracture
9 heal and still it's not hopeless.

10 You know, even you have bone changes
11 showing very dense fracture margin and other
12 changes showing nonunion, then you are really
13 alarmed, but again, since we are talking about
14 this external bone stimulators, this method has
15 been used also in nonunion case, which is more
16 than a one year old fracture.

17 Q. Doctor, going back to my question again, I
18 asked you as of December, '91, would you agree
19 that the surgery that you had performed in August
20 of '91 had failed to accomplish the intended
21 purpose?

22 A. Has not healed as of this time, yes.

23 Q. Had it accomplished what you had intended
24 it to accomplish as of December, 1991?

25 A. We were disappointed but it's not

1 completely failed.

2 Q. All right. Did you express your
3 disappointment to Kathy Wenzel?

4 A. Yes.

5 Q. Did you offer to redo the surgery at no
6 cost?

7 A, Yes.

8 Q. You did offer to redo it?

9 A, Yes.

10 Q. Okay. Doctor, where in your records did
11 you offer to redo the surgery? You told me that
12 she didn't want to have it done because she lost
13 her insurance, Where does it say in your records
14 that you said, Kathy, don't worry about not having
15 insurance, I will redo it at no cost?

16 A. Well, I think I told you the last time
17 during the, when we had the deposition, I have
18 told her, not only once, a few times, but I didn't
19 write it down. There were some notes on her
20 during the cast room visits. And for some reason,
21 I have written few lines sometimes, and you are
22 correct, I have not written anything about that.

23 Q. But it's your independent recollection that
24 you felt disappointed that it had not accomplished
25 everything that you had intended it to accomplish

1 and you offered to her to do the surgery at no
2 cost?

3 A. Yes.

4 Q. And what was her response when you made
5 that offer?

6 A. That she does not have an insurance. Even
7 though I offer no cost, but she has to pay all
8 other doctors, including radiologist, pathologist,
9 anesthesiologist and the hospitals and all this.
10 My surgical fee, I don't think is really big.
11 Actually it's the hospital cost. So I just didn't
12 have any heart to push. But when she does not
13 want to have surgery, how can I do it?

14 Q. Okay. Well, is it your testimony that she
15 didn't want to have surgery or is it your
16 testimony that beyond what you claim to be your
17 gesture of doing the surgery free or at no charge,
18 that she was still concerned about the other costs
19 that you could not control?

20 A. I thought there was a reason she said,
21 because she did not have any surgery, she can't --
22 I'm sorry. Since she did not have insurance, she
23 couldn't have surgery.

24 Q. Kathy Wenzel didn't tell you that she
25 didn't want to have the surgery, did she?

1 A. That is my interpretation, when she says, I
2 don't have insurance and I cannot have surgery.

3 Q. Did she in fact tell you that even if all
4 costs were free or if there were other
5 arrangements could be made, that she wouldn't
6 under any circumstance want to have the surgery or
7 was it an issue of being able to afford to have
8 the surgery?

9 A. I think the answer is clear. She does not
10 have insurance. She was working at the time and
11 she cannot afford it. She is divorced and that's
12 what she said.

13 Q. But Kathy Wenzel didn't say to you, doctor,
14 thank you very much for that offer, but I am not
15 interested in having the surgery? She never said
16 anything like that to you, did she?

17 A. Well, she did not say exactly what you
18 said, but she said I can't have surgery because I
19 don't have any insurance.

20 Q. Okay. Did you make any effort, doctor,
21 knowing as you claim --

22 A. Yes.

23 Q. -- that you were willing to do the surgery
24 free, did you make any effort to contact the
25 hospital and to see whether there could be any

1 arrangements made to permit this patient to have
2 the surgery given the circumstances that we talked
3 about and given the fact that you told the patient
4 you would do it at no charge?

5 A. I did not do it because I know it's a
6 futile effort because I have done a few times in
7 the past on other patients.

8 This patient has a job. This patient --
9 the hospital, even medical staff is late for
10 payment, they usually send to a collection
11 agency. We know that. So we, I knew that this
12 was a futile case; there is no use to even check
13 with the hospital administration.

14 Q- Your testimony is that you did not make any
15 attempt --

16 A. No, right.

17 Q. -- in connection with Kathy Wenzel --

18 A. Right.

19 Q. -- to find out whether circumstances or a
20 circumstance could be worked out whereby she could
21 make some payment arrangements, given the fact
22 that she was employed? You didn't contact anyone
23 at the hospital and find out --

24 A. No.

25 Q. -- whether that was possible, did you?

1 A. No.

2 Q. Okay. And given the fact that Kathy Wenzel
3 could not afford to pay for the hospital and the
4 allied services of anesthesia, the surgery was not
5 done; correct?

6 A. Well, I didn't think that far at the time,
7 but it's common sense. It's not the hospital,
8 there is anesthesiologist, there is pathologist
9 for laboratory studies, there is also radiologist,
10 anesthesiologist and pathologist.

11 Q. Do you know what those costs would have
12 been, doctor?

13 A. I don't know.

14 Q. Did you bother calling the doctors, the
15 anesthesiologist, the pathologist to find out what
16 the cost would be?

17 A. No.

18 MS. O'BRIEN: I am going to object
19 to this whole line of questioning. You
20 have been beating him up, you know, about
21 this for a long time now, Howard, and he
22 has no obligation to call anybody and try
23 and make those arrangements, not to
24 mention the fact that he has told you
25 that he has done in this the past for

1 other patients and gotten nowhere.

2 MR. MISHKIND: Is this an
3 objection or are you making a closing
4 argument, Cheryl? I mean, I am not
5 beating the doctor **up**.

6 MS. O'BRIEN: You are.

7 MR. MISHKIND: I object. I am
8 offended by your objection on the record,
9 which is precisely why we have it
10 videotaped.

11 MS. O'BRIEN: Well, I am offended
12 by the inference you are making by
13 continuing this line of questioning and
14 making this doctor feel as if for some
15 reason he has failed this patient because
16 he doesn't have any control over how much
17 the hospital charges and who they are
18 going to charge and who they are not
19 going to charge.

20 MR. MISHKIND: Are you done? I
21 would like to get on with the
22 deposition.

23 MS. O'BRIEN: I am done. I am
24 waiting for you to get on with the
25 deposition.

1 MR. MISHKIND: I am waiting for
2 you to stop your speeches so I can ask
3 questions.

4 MS. O'BRIEN: As long as you move
5 on to other more pertinent material we
6 can get going.

7 MR. MISHKIND: I am glad you have
8 now set the rules for how I'm going to
9 conduct the balance of this deposition,
10 Cheryl.

11 MS. O'BRIEN: No, the rules were
12 set before I came here, they are just not
13 being followed,

14 MR. MISHKIND: No, you are
15 rewriting them.

16 Q. The stimulator, the bone stimulator, this
17 was an EBI stimulator?

18 A. Yes.

19 Q. Okay, What part of the body was the
20 stimulator originally customized for on your other
21 patient?

22 A. It was for the fibular.

23 Q. I am sorry, what?

24 A. Fibular. F-I-B-U-L-A-R. This is a smaller
25 bone of the two leg bones,

1 Q. These bone stimulators have to be
2 specifically customized for particular patient and
3 a particular bone involved, correct, to be
4 effective?

5 A. I don't think so. I asked the salesman and
6 they said it doesn't really make a whole lot
7 different for the size of the bone or location.

8 Q. When did you ask the salesman about that?

9 A. I think it was before I recommended, I
10 asked.

11 Q. Did you tell the salesman that you were
12 using someone else's bone stimulator, another
13 patient's, that was being used on his leg for
14 another one of your patients?

15 A. Yes.

16 Q. Okay. And was that acceptable to the EBI
17 representative?

18 A. No. I didn't ask about that. I just asked
19 him about the size and the location, and whether
20 it would be -- make it any different.

21 Q. You personally don't set the gauges or the
22 wires for the bone stimulator, do you?

23 A. No.

24 Q. That's something that's done by the EBI
25 technician; correct?

1 A. Not the technician. It's already made at
2 the factory and all we do is we apply and give
3 instructions to the patient.

4 Q. Okay. But the factory prepares it based
5 upon the specifications that you give as to what
6 type of patient, what type of bone it's going to
7 be used for?

8 A. Yes.

9 Q. Okay, And it's your testimony, doctor -- I
10 just want to understand -- that you spoke to an
11 EBI representative who told you that the coils and
12 the settings on the bone stimulator that had been
13 used on the fibular bone could be used on a
14 forearm fracture, as well, without any adjustments
15 being made?

16 A. What I asked him was whether it could make
17 any big difference, and he thought that there was
18 not much difference. It could be used for the
19 forearm bone too. Because the size of the bone is
20 almost the same.

21 Q. Well, isn't it important that the coils and
22 the settings on the bone stimulator be set
23 specifically for the particular patient's needs to
24 be effective?

25 A. I really -- I cannot answer that specific

1 questions, because these are all technical things.

2 Q. In November of '92, in your office records,
3 you have a note that says external bone stimulator
4 was applied, instructions given by company rep.

5 A. Yes.

6 Q. Now, that's the first time that I see any
7 reference to a company rep. And we know that you
8 had been using the bone stimulator since, I
9 believe, April of '92. Can you explain to me what
10 occurred in November of 1992?

11 A. Probably you recall during the last
12 deposition, I told you that I had this EBI bone
13 stimulator available. Since Kathy could not
14 afford any bone stimulator, let alone surgery, I
15 used it.

16 Q. All right. That was this other patient's
17 from a Workers' Compensation claim?

18 A. Right, right. And Kathy knew that too.

19 And somehow she had a problem with using
20 it. It was supposed to be used at least eight
21 hours a day and the placing that round coil right
22 over the fracture site, so once in a while when I
23 see her, either she has not been using it quite
24 eight hours, according to her.

25 And then again when I check her, sometimes

1 A. I forgot. I can get it later, but I cannot
2 remember now.

3 Q. There is a way to determine whether or not
4 a patient has been using the bone stimulator
5 time-wise as prescribed; correct?

6 A, Yes.

7 Q. There is a clock on it?

8 A. Not all the types, The old ones, EBI had
9 no built in clock or amount of time they used.
10 The new ones, they have it. You turn on and then
11 the date, the built in clock runs and you can
12 measure how many hours, how many minutes you have
13 used it.

14 Q. Was the EBI that this other patient had
15 that you let Kathy use, did that have a clock?

16 A. I don't think so.

17 Q. Do you have that bone stimulator now?

18 A. No. It was returned,

19 Q. Okay. Who was it returned to?

20 A. I think it's the company.

21 Q. To EBI?

22 A. Yes.

23 Q. Okay. Was it rented?

24 A. No. All this bone stimulators after being
25 used, whether the patient has successful outcome

1 or not, after a certain period of time, if the
2 doctor decides that it should be used no longer
3 then they are being returned to the company.

4 Q. Are they normally purchased or are they
5 rented?

6 A. Well, actually you call it purchased, but
7 they say it's by law you cannot keep it, so, we
8 are required to return them.

9 Q. Now, did you have to notify the Industrial
10 Commission that you were loaning this bone
11 stimulator from another patient to Kathy Wenzel?

12 A. No, Actually I got a permit from the
13 patient, who said I don't need it because I got
14 another one, so you use it for other patient who
15 cannot afford it.

16 Q. Eventually, though, you had to return that
17 bone stimulator to EBI, whether it was from that
18 patient or from Kathy Wenzel; correct?

19 A. Yes.

20 Q. Doctor, I'm going to hand you what has been
21 marked for identification as Plaintiff's
22 Deposition Exhibit 11. And just for the record, I
23 will tell you that this is a portable film dated
24 August 18, 1991 from Lorain Community Hospital for
25 Kathy Wenzel post-op after your surgery.

1 If you would just take a look at it and
2 make sure that I have not misrepresented things
3 and then I want you to put it up on the view box.

4 A. I think we went through before. It's
5 August 18th, '91.

6 Q. We did not go through this film before,
7 doctor.

8 MS. O'BRIEN: It's all right.

9 Q. Can we agree that this is the portable film
10 that would have been taken by you or in the course
11 of your treating of this patient immediately after
12 the surgery on August 18th, perhaps even while she
13 is in the OR?

14 A. Yes.

15 Q. Okay, Now, what is cross compression,
16 doctor?

17 A. Cross compression is when the fracture line
18 is longitudinal or cross to par-alignment to the
19 cortex of sides. That fragment is being fixed,

20 Q. With regard to the ulna, doctor, would you
21 agree that there was a small butterfly fragment
22 that extended almost the full length of the
23 fracture?

24 A, No. I wouldn't say so. I would say -- I
25 see on the radial side, not the ulna side.

1 the coil is off the center, and again, there was
2 no satisfactory progressive healing taking place,
3 so I --

4 Q. No satisfactory progressive healing as of
5 November, '92.

6 A. Yes.

7 Q. Okay.

8 A. So I called this rep from a different
9 company, not EBI, and I asked him -- I told him
10 that since he has helped me in the past with other
11 delayed and nonunion cases, so I asked him if he
12 could help me.

13 This type is slightly different from EBI.
14 EBI is post stimulator which goes over the cast.
15 It's fairly big, like I told you, it could be
16 misplaced if you are not careful.

17 The company where I contacted was producing
18 different kind of a stimulator. He has a two
19 coils and there is small contact which can be
20 applied right over the skin, and he thought that
21 this is more effective, so we put it -- that is
22 the reason why we now have a rep -- not EBI, a rep
23 from the bone stimulator company.

24 Q. What is the name of this bone stimulator
25 company?

1 Q. You see what on the radial side? A small
2 butterfly fragment that extends --

3 A. Yes.

4 Q. -- almost the full length of the fracture?

5 A. Yes,

6 Q. Is that small butterfly fragment, can we
7 call that butterfly fragment as being displaced?

8 A. No. It's not, maybe about, on the proximal
9 side, maybe one millimeter and on the other side
10 maybe about two, three millimeter. It's very
11 minimal.

12 Q. Okay.

13 A. Insignificant, I would say.

14 Q. Insignificant?

15 A, Yes,

16 Q. Okay. Now, looking at the radius -- now,
17 for purposes of our viewing of this film, the bone
18 on the right side of the X-ray, is that the radius
19 or the ulna?

20 A. From your right, this is radius.

21 Q. Okay. On that film, which is a post-op
22 film, how many screws are there to the proximal
23 end of the fracture?

24 A. Actually, we don't see the major fracture
25 line of the radius. We see just a small sort of a

1 sliver type of fracture line. You can call it
2 butterfly fracture, but clinical there was
3 transverse type of fracture, probably just below
4 or above from your point of view to this third
5 screw, so if you say where is the fracture, major
6 fracture line, it's between second from the top
7 and third from the top, but I can see -- see, if
8 you -- how many screws do I see from the major
9 fracture line? I see at least two here and the
10 two up and down.

11 Q- Now, when I said proximal, doctor, proximal
12 is, on this X-ray, proximal would be at the
13 bottom?

14 A. Bottom, yes.

15 Q. Okay, all right. Now, on the radius where
16 you are looking at the butterfly fragment, does
17 the screw that is on the proximal end of the
18 fragment of the fracture fragment, the major
19 fracture fragment, does that fully purchase the
20 opposite cortex?

21 A. No.

22 Q. Okay. There is a, what appears to be a
23 drill from, a drill hole from one side of the
24 cortex through to the other side; correct?

25 A. Yes.

1 Q. But yet the screw does not fully purchase
2 or occupy the drill hole through and through or
3 from one side of the bone to the other, does it?

4 A. I can see the drill hole, but I may have
5 used -- there is, you know, a drill hole here, but
6 I can see that it's not filled in fully.

7 Q. Okay. And, doctor, you are the orthopedic
8 surgeon, so tell me whether that's of any
9 significance to you as you look at the film
10 proximal to the radial fracture where you see that
11 there is a screw in the plate that purchases one
12 side or one cortex, but does not go through to the
13 other cortex. Is it of any significance?

14 A. At this time, one screw is completely
15 filled in. On this view, the opposite screw,
16 opposite cortex is not completely filled in, that
17 I can see.

18 Q. Is that appropriate or acceptable surgical
19 technique to drill a hole through to the other
20 cortex and not to have the screw purchase to the
21 other cortex?

22 A. Well, what we do is, after we drill it, we
23 put gauge, depth gauge, we measure it, and we
24 select the appropriate size screw and put it in.

25 Q. Okay.

1 A. And when we have this kind of a picture, I
2 thought that it's a little bit of a tilting
3 rotation can sometimes show that the screw is not
4 showing to the end, even though there is enough
5 purchase of the opposite cortex,

6 Q. Can we agree that the standard of care
7 requires that the screw, that you choose a screw
8 so that the size of the screw occupies the drill
9 hole from cortex to cortex?

10 A. Yes, That is correct.

11 Q. Okay. And can we agree that at least as we
12 look at this film, immediately post-op, that the
13 screw, the proximal screw on the radial fracture
14 does not purchase the opposite cortex?

15 A. I believe that, I thought that there was
16 enough purchase, but because of a rotation, it's
17 showing that way,

18 Q. Can we agree that based upon what we are
19 looking at in this X-ray that the screw proximal
20 to the radial fracture does not purchase the
21 opposite cortex?

22 A. I think it's hard to tell, because like I
23 told you, when you have a rotation, when you don't
24 have an exact 90 degrees, we don't see the screw
25 going all the way to the -- showing exact larger

1 view. When you rotate it 30 degrees, 45 degrees
2 or even less, even though the tip of the screw is
3 purchasing the opposite cortex, sometimes it shows
4 that it's a little off.

5 Q. And, doctor, just so we can move on, can we
6 agree that what is shown here, at least shows that
7 the tip of the screw is a little bit off and
8 doesn't purchase the entire cortex?

9 A. It's possible,

10 Q. Well, you are looking at the same film that
11 the video camera is looking at and we are talking
12 about the screw that is on the right side of the
13 two bones and the screw that is the closest to the
14 -- we are talking about this screw right here,
15 correct, doctor?

16 A. Yes.

17 Q. Okay. And can we agree that there is a
18 screw hole, a drill hole that goes from the, where
19 the screw head is here all the way through the
20 bone to the opposite cortex? That's what that
21 space is; right?

22 A. Yes.

23 Q. Okay, And can we agree that the screw does
24 not, at least on this film that we are looking at,
25 fill the entire space; that there is a hole on the

1 opposite cortex, but no screw going through it?

2 A. Yes, that's correct.

3 Q. Okay. And can we agree that that is not
4 the standard method that you as an orthopedic
5 surgeon employ in terms of purchasing and fixating
6 a bone; that what you do is you choose the screw,
7 you drill the hole and you choose the screw so
8 that the screw goes from cortex to cortex and
9 fills the opposite cortex?

10 A. Yes.

11 Q. Okay.

12 A. They like to do it that way.

13 Q. I'm sorry, doctor?

14 A. Yes.

15 Q. Okay. Is there a rule of thumb that you
16 generally follow in terms of the number of
17 cortices that need to be purchased on each side of
18 a mid shaft fracture in order to have adequate
19 fixation?

20 A. Well, we like to have probably two to three
21 times of the width of bone.

22 Q. I'm sorry, could you repeat that. You like
23 to have what?

24 A. That the plate size would be two to three
25 times the size of the fracture, so they can be

1 covered. We are talking about not this fracture
2 line which is vertical or longitudinal. I am
3 talking about the fracture which took place
4 separating the two bones.

5 Q. Okay. And my question was, as a rule of
6 thumb, in terms of the number of cortices that you
7 want to purchase on each side of a mid shaft
8 fracture, and is there such rule of thumb in terms
9 of the number that you as an orthopedic surgeon
10 employ?

11 A. That's what I said. We would like to have
12 two to three times the size of the fracture line
13 extending proximally and distally.

14 Q. I guess what I am getting at is, and maybe
15 I'm off base on it because I am just a lawyer and
16 I am not an orthopedic surgeon, but my
17 understanding that there is a rule of thumb that
18 generally you want to have four to five cortices
19 on each side of the mid shaft fracture that's
20 purchased in order to have adequate fixation of
21 the bone? Does that help you at all in terms of
22 where I am going?

23 A. Yes.

24 Q. Is that a generally accepted practice?

25 A. About -- what you are saying is the size of

1 the cortex of, the one and the two, counting two
2 at one level.

3 Q. In other words, when you go through the
4 bone --

5 A. Yes, correct.

6 Q. If the screw goes from one side of bone to
7 the other, that's purchasing two cortices;
8 correct?

9 A. Yes, uh-huh.

10 Q. Okay. Is there a rule of thumb that you
11 follow or that you are aware of in orthopedic
12 surgery when dealing with a mid shaft fracture in
13 terms of the number of cortices that need to be
14 purchased in order to have adequate fixation?

15 A. Yes.

16 Q. Okay. What is that rule of thumb?

17 A. That's between four to six is enough.

18 Q. Okay.

19 A. But here I thought the fracture was just
20 below this screw here, so we have at least one,
21 two, three, four, five, possibly six or five and a
22 half.

23 Q. What about distal?

24 A. Yes. We have four. That's why we -- if
25 you are questioning their way, counting cortices,

1 but again, when we are using the size of the plate
2 with five holes, then that doesn't count. We
3 can't really count number of cortices, how many
4 proximal and how many distal to the fracture site.

5 Q. Why? Because the plate is the minimal size
6 that you could use?

7 A. Yes.

8 Q. Okay. So that when you use a minimal size
9 plate, you are limited in terms of how much
10 purchase you can have on each side of the
11 fracture?

12 A. Right. Again, the same token, if we use a
13 longer plates, we strip off all this muscles and
14 cause loss of blood supply to the bone, and that
15 can also cause nonunion or delayed union.

16 Not only that, when we again strip off all
17 this to expose more bone, just to put the longer
18 plate, we can also damage the vessels and nerves,
19 so we have to find a happy medium and that's why
20 we have medium size plates.

21 Q. Well, you would agree that you have to
22 choose a large enough plate in order to have the
23 fixation balancing the neuro vascular status of
24 the bone. But certainly you don't want to choose
25 an overly small plate that's going to increase the

1 likelihood of nonunion?

2 A. Yeah, that is correct.

3 Q. Okay. Doctor, I am going to hand you
4 Plaintiff's Exhibit 12, and I will tell you that
5 this is a film taken at St. Joseph Hospital, just
6 nine days later, August 27, '91. And I want to
7 talk about what you see nine days after the
8 surgery, and whether or not what you see on this
9 film, doctor, nine days later, in your opinion was
10 acceptable, period.

11 Now, just for clarification purposes on the
12 record, is that the August 27, 1991 film from St.
13 Joe?

14 A. Yes, This was taken on August 2nd, '91.

15 Q. It's actually August 27, doctor. There is
16 a 2 and a 7.

17 A. Yes, oh, that's a 27.

18 Q. Okay. On the right-hand side of the split
19 film, what type of view are we looking at?

20 A, This is so-called anterior posterior view
21 or front view of the forearm bone.

22 Q. Okay. And on the left side what type of
23 view?

24 A. This is lateral view or side views.

25 Q. Okay. Now, using the AP view, which is on

1 the right-hand side, the bone that is on the
2 right-hand side of that exhibit, are we talking
3 about the ulna or the radius?

4 A. The right-hand side is radius.

5 Q. Okay. Now, looking at the -- look at the
6 ulna for a moment, if you would. Tell me how many
7 screws you see distal to the end of the fracture.

8 A. From fracture here, I see two screws
9 distally.

10 Q. Now, the screw on the ulna that is most
11 distal, this screw --

12 A. Yes.

13 Q. -- is that screw to you -- does that appear
14 to be migrating or coming out at all?

15 A. No, it doesn't look like it. When a screw
16 hole is made in such a way that when the screw is
17 not going exactly 90 degree or perpendicular, you
18 can see sometimes this kind of small tiny gap, It
19 doesn't mean that it's not all the way down or is
20 loose.

21 Q. Okay. So your testimony again -- and I
22 just want to understand -- is the screw that is
23 most distal on the ulna does not appear to be
24 coming out at all?

25 A. No.

1 Q. Okay. What about the screw most proximal
2 to the fracture site on the ulna? Can we agree
3 that that screw nine days after the surgery is
4 already coming out?

5 A. I have to see the previous one. No,
6 Again, this is possible that it's not screw or was
7 not made exactly 90 degree perpendicular and this
8 could be sort of a tilting when the screw was put
9 in,

10 Q. Well, is the screw in your opinion in an
11 adequate position from what you see on the X-ray,
12 the proximal screw?

13 A. I want you to understand that when we put
14 this plate over the bone, this cannot be because
15 of the shape of the bone placed straight in the
16 middle of the bone, and when there is a tilted in
17 the one corner or one end, the screw head cannot
18 be inserted perpendicularly,

19 So when we take picture, the other screws
20 can show straight 90 degree in two or three plane
21 or two planes, but one can show the kind of
22 tilting. So as of now, I was not really
23 concerned.

24 Q. Doctor, can we agree that there is only one
25 screw to the proximal end of the fracture on the

1 ulna on that X-ray?

2 A. There is reason. When I put the screw, I
3 saw only this fracture line, and when I saw it,
4 there was on the naked eye or on vision, I did not
5 see this fracture line; otherwise I could have
6 gone all the way up, but that was after the
7 surgery and the X-rays were done.

8 Yes, if you are saying there is one screw
9 and if we count this one also, yes, there is only
10 one screw proximally.

11 Q. Can we agree, again, nine days after the
12 surgery, when we look at this X-ray that there is
13 only one screw that is proximal to the fracture of
14 the ulna?

15 A. Yes. Just make it short, yes. But there
16 was my explanation.

17 Q. And your explanation is you didn't realize
18 that the fracture extended as far as it did.

19 A. I did not see it at the time of surgery.

20 Q. Okay. And in order to properly fixate a
21 fracture, you as the surgeon have to adequately
22 visualize the fracture, especially when you are
23 doing an open reduction?

24 A. Of course, of course.

25 Q. Okay.

1 A* But when we see -- many times we cannot on
2 a naked eye can see the line. Sometimes after
3 immobilizing for a while, the bone becomes sort of
4 osteoporotic and then the fracture line shows up.
5 It's not unusual not to see the fracture line
6 nearby.

7 Q. On that X-ray, doctor, when we talk about
8 having four to six cortices purchased on the
9 proximal or the distal end of the fracture, can we
10 agree that as of nine days after the surgery that
11 on the ulna that we had at most one cortex which
12 was purchased proximal to the fracture?

13 A. Yes.

14 Q. Okay. And that certainly is not an
15 acceptable fixation, is it?

16 A. If we look back, having this delay union
17 and nonunion, then we can say that, yes. But as
18 of now, after surgery, the alignment is straight
19 and the screws are in place, except maybe this
20 one. I was not really overly concerned. And then
21 we had a cast mobilization for protection.

22 Q. Well, if there is adequate fixation after
23 an open reduction and an internal fixation, is
24 cast mobilization even necessary?

25 A. Not absolutely necessary, but usually for

1 four weeks or so, be immobilized and put half cast
2 or regular cast.

3 Q. How long in months or years was Kathy
4 Wenzel in a cast while she was a patient of yours?

5 A. She had a cast until I saw her last in
6 December 15th, '92.

7 Q. So she had 16 months of cast, long, short,
8 while she was a patient of yours?

9 A. Yes.

10 Q. Never out of a cast?

11 A. Yes.

12 Q. And you took a cast off, you put it right
13 back on or a new one back on?

14 A. Yes.

15 Q. Okay. On that August 27th film, doctor, on
16 the distal end of the ulna, how many screws are
17 there at the distal end of the fracture?

18 A. There are two screws.

19 Q. Okay. Now, looking at the radius for a
20 moment, when we talk about the size of the screws,
21 did you have various screws that were available to
22 you?

23 A. Yes.

24 Q. Okay. So that just as you had various size
25 plates, you also had various size screws?

1 A. Yes.

2 Q. Okay. When you have a comminuted fracture
3 of the radius and the ulna, is stability of the
4 fracture of both bones critical in order to
5 achieve acceptable results?

6 A. Yes.

7 Q. Okay. Sometimes when you have a fracture
8 of the ulna, but not the radius, you can just let
9 it heal on its own?

10 A. Yes.

11 Q. Okay. But when you have both fractures,
12 that requires extra care to make sure that the
13 fractures are stabilized; correct?

14 A. Yes.

15 Q. Is there sort of a dynamic effect of the
16 two bones are working together and when both of
17 them are fractured, you have to be even more
18 careful?

19 A. Yes.

20 Q. Okay. I am going to hand you, doctor, the
21 October 20, 1992 film from St. Joe, and again, ask
22 you if you would put that up on the view box.

23 MS. O'BRIEN: What Exhibit Number
24 is that?

25 MR. MISHKIND: Pardon?

1 MS. O'BRIEN: Exhibit number? Is
2 that 13?

3 MR. MISHKIND: Yeah, whatever. I
4 can't count.

5 Q. Now, on Exhibit 13, doctor, on the
6 right-hand side, would we be calling that the AP
7 view?

8 A. Yes.

9 Q. Okay. And describe for me, if you would,
10 perhaps starting with the ulna, and perhaps using
11 your finger, if you could start on the AP view?

12 A. Yes. I'll --

13 Q. Reverse it?

14 A. I will reverse it, because this is
15 reversed.

16 Q. Okay. So we are now on the left side of
17 the film, but we are still looking at the AP
18 view.

19 A. Yes.

20 Q. Starting with the ulna, if you could tell
21 me from the distal end, moving down to the
22 proximal end, what this X-ray designates or
23 signifies to you in terms of the fixation, the
24 position of the screws and the position of the
25 plate, starting with the ulna.

1 If I see the ulnar, the major fracture
2 fragment which I showed you before at the middle
3 part of the plate on this X-ray, which
4 August 27th, I don't see the line any more, so I
5 interpret that as healing fracture there.

6 And if we go up proximally, the fracture
7 which I thought it was minimal, because when I did
8 the surgery' I didn't see the line at all and now
9 it becomes major that I see a fracture line there,
10 but still this is a straight and in between this
11 fracture line there is a fuzzy bone sticking up,
12 so I was optimistic at the time. And there is
13 some evidence of some loosening of screw in the
14 most proximal one.

15 Q. So on the -- and we have got on the
16 proximal screw, there is only one screw proximal
17 to the ulna fracture; correct?

18 A. Yes.

19 Q. Okay. And again, that is not the way that
20 you would have designed the fixation to only have
21 one screw proximal to the fracture; correct?

22 A. No. It was not my intention to do it that
23 way.

34 Q. Okay. Because if you did that, if you
25 designed it that way, that would increase the

1 likelihood of there being a nonunion; correct?

2 A. It's possible that it could go delayed
3 union or nonunion.

4 Q. Well, isn't it increasing the likelihood
5 when you only have one screw that's proximal to a
6 major fracture fragment?

7 A. Yes, it is possible, yes.

8 Q. It increases the likelihood of there being
9 nonunion or delayed union; correct?

10 A. Yes.

11 Q. Okay. And we know as of October 20th, that
12 the screw, the only screw that's proximal on the
13 ulna fracture is now migrating out more; correct?

14 A. No. I wouldn't say it's migrating more.
15 Like I mentioned before, the line is a very hazy.
16 If you see, you can barely see there is a fracture
17 line. Maybe you see some dark area on the
18 opposite cortex. If you see between this two
19 proximal screws, there may be just a dark area,
20 but I don't see any fracture, distinctive fracture
21 line, so I was optimistic.

22 Q. You were satisfied with how the radius
23 looked given the size of the fracture fragment,
24 given the amount of purchase that you had on each
25 side of the major fracture fragment?

1 A. The radius or ulna.

2 Q. I am talking about the ulna.

3 A. Ulna. As of now, since I saw that healing
4 process of the major fracture line, and then the
5 unexpected line, I found after the surgery, still
6 there has been progressive healing so I was not
7 really very much concerned at this time.

8 Q. And this unexpected line that you found
9 after the surgery, when did you first become aware
10 of it?

11 A. There was after surgery.

12 Q. Would it have been during that portable
13 film immediately after the surgery?

14 A. That we didn't find it, but previously or
15 during surgery. I think it was after, much after
16 the surgery was done.

17 Q. But it's reflected on the post-op portable
18 X-ray, is it not?

19 A. Yes. There was a slight displacement, but
20 there was a really impacted and there was not
21 clear, if you recall back.

22 Q. Well, at the time, though, if there is a
23 displacement, so that the fracture fragment is
24 larger than what you had visualized it as, that
25 portable X-ray that's taken, is the patient --

1 have you already closed up the patient?

2 A. Yes.

3 Q. Okay. Have you ever had occasion where you
4 have -- strike that.

5 What is the reason you take a post-op
6 X-ray?

7 A. I want to see the shape of the condition of
8 the reduced fracture fragments,

9 Q. And you as an orthopedic surgeon look at
10 those X-rays, don't you?

11 A. Yes.

12 Q. You don't rely on the radiologist for a
13 post-op film; correct?

14 A. I do, but I check myself.

15 Q. Okay. And you do, because you have the
16 patient right there in the operating room and you
17 are talking a post-op X-ray and you want to make
18 sure that everything is okay?

19 A. Yes.

20 Q. Have you ever had occasions where you have
21 gone back in and reoperated, based upon what you
22 see on a post-op X-ray?

23 A. On fracture cases like this?

24 Q. Yes.

25 A. I don't recall having this kind of

1 problem. I have never had that problem like this.

2 Q. You have never had a problem like Kathy
3 Wenzel's before?

4 A. No.

5 Q. Let's talk about the radius for a moment on
6 that film that's on the left side of the view
7 box.

8 A. Ulna.

9 Q. No, we are done with the ulna now?

10 A. Yes.

11 Q. Let's talk about the radius,
12 On that film, distal to the major fracture
13 fragment, what, how would you describe the
14 purchase? Is there adequate fixation?

15 A. At this time I see the middle screw if we
16 go back, which was done on August, now is loose
17 and butterfly fragment we had talked about before
18 shows at least two third of ulna here, proximal
19 side line here is all healed up and the lower two
20 third part is still, they are not here, and major
21 fracture line was I think about here, and you can
22 see dark lines is still not here.

23 I was concerned about this loosened
24 fragment, but as long as those two screws,
25 proximal, those two screws distal are still

1 holding, plate is in place, and then there has
2 been progressive healing taking place, so I was
3 not again alarmed much.

4 Q. But you did have some concerns at that
5 point?

6 A. Yes.

7 Q. Was there some angulation at that point?

8 A. No, I cannot say. Maybe, it looks like
9 there is angulation because of more bone formation
10 close to the tip of the plates so it looks like a
11 little curve, but overall alignment seems to be
12 okay.

13 Q. Okay. So you won't describe it as having
14 slight angulation at that time?

15 A. If we measure with, yes, you may call it,
16 but it's not gross or a bad angulation at all.

17 Q. Well, I mean, would you, you refer to it as
18 slight angulation or not?

19 A. Very, very minimal angulation.

20 Q. You would call it minimal angulation?

21 A. Very minimal, yeah.

22 Q. What is the date on that film, again,
23 doctor?

24 A. That was October 20th, '92.

25 Q. Okay.

1 A. And then, until then it's not that I did
2 not protect this forearm. I had the cast all
3 along to minimize any further injuries or gross
4 motions.

5 Q. You were concerned that the fixation, even
6 as of October, that the fixation that you had
7 hoped to accomplish to both fractures was not
8 occurring in the manner in which you had intended
9 it; correct?

10 A. No. It's not correct. The patient had the
11 surgery in August and it's only October, and there
12 has been a fair amount of healing taking place, so
13 I was, like I told you, I was not really alarmed,
14 but concerned because of one loose screw.

15 Q. So all you were concerned about was one
16 loose screw? You weren't concerned about the
17 adequacy of the purchase on the proximal and
18 distal ends of the major fracture ends?

19 A. No. Well, like I mentioned before, I was
20 concerned, but I was not really alarmed, but I was
21 protecting that forearm so that it could heal.

22 Q. And did you want to keep the arm in a long
23 arm cast because you were concerned about whether
24 or not the fixation was going to be, the internal
25 fixation was going to be adequate?

1 A. Yes.

2 Q. Why then did you switch to a below elbow
3 cast in November?

4 A. Because I was concerned about motion and
5 function of the elbow. Since there has been
6 progressive healing process going on and I want to
7 make sure that she does not end up having stiff
8 elbow, so I cut down and I asked her to do
9 exercises.

10 Q. Doctor, in your office notes on December
11 15, '92, you say which is your last note -- you
12 indicate repeat X-ray examination was done and
13 this seemed to show some healing process for the
14 first time. What did you mean by that?

15 A. I should have mentioned that the first
16 time, probably for a past month or two, it is not
17 during the course of treatment I saw that healing
18 process for the first time, it's not, that's not
19 what I meant.

20 Q. Okay. So what you want the record to
21 reflect is when you said healing process for the
22 first time in December of '92, what you meant was
23 the first time you seen a healing process for the
24 last several months?

25 A. Yes.

1 Q. But there had been healing process before
2 that?

3 A. Yes. As of even in October 20th, as I
4 mentioned before, there has been healing process,

5 Q- Okay. There is a -- let me ask you this,
6 doctor. When you would see the patient at the
7 cast room at St. Joe, would you review the X-rays
8 before you would make your notation in the record
9 or would you make your notation in the record and
10 then look at the X-rays that were taken on that
11 particular day?

12 A. I review the X-rays first and then make a
13 notation.

14 Q. Okay. So that when you would write
15 whatever you would write, you would have the
16 benefit of having seen personally the X-rays for
17 that particular day?

18 A. Yes.

19 Q. Correct?

20 A. Yes.

21 Q- Okay. And presumably have the benefit of
22 comparing that film serially to at least a prior
23 film to see whether or not there is any
24 improvement or worsening in the status?

25 A. Yes.

1 Q. Okay .

2 MS. O'BRIEN: Howard, it's after
3 2:30.

4 MR. MISHKIND: I do know that.
5 Let's go off the record for a second,
6 (Thereupon, a discussion was had
7 off the record.)

8 MR. MISHKIND: Let's go back on
9 the record.

10 MR. HERSCH: Back on the record,

11 Q. Doctor, did there ever come a time where
12 you consulted with any other orthopedic surgeons
13 concerning the condition of Kathy Wenzel's arm?

14 A. No .

15 Q. When you would see Kathy at the hospital at
16 St. Joe, did you ever have a resident or an
17 assistant with you when you actually physically
18 examined her, or a nurse?

19 A. We don't have a residency, residents, but
20 we do have nurses and cast room technician to help
21 me .

22 Q. Did you personally ever discuss -- not
23 necessarily consult with, did but did you ever
24 discuss with any nurses, technicians or other
25 physicians the status of Kathy Wenzel's recovery?

1 A. No. There was no need, because we, the
2 problem is after December '91, we knew that we
3 were having problems, so I had recommended to her
4 surgery. And then I was doing other things, like
5 external bone stimulators, in addition to cast
6 manipulation.

7 The answer was obvious. We needed to do
8 surgery. That was the best way for her,

9 We couldn't do that. So we are doing the
10 second best thing. And I, again, to have a
11 consultation with the other surgeons, I thought it
12 was, again, added expense and futile effort.

13 Q. You talked about doing manipulation on the
14 bone in December of '91.

15 A. Yes.

16 Q. Okay. When exactly was that in December of
17 '91 that you manipulated the bone?

18 A. There was on December 17th, '91.

19 Q. And at that time, you had -- the X-rays
20 showed angulation, the screws had loosened;
21 correct?

22 A. Yes.

23 Q. Now, which bone were you manipulating?

24 A. There is no way we can manipulate only
25 one. When we manipulate means we do forearm

1 manipulate.

2 Q. Which bone were you primarily concerned
3 about that caused you to manipulate?

4 A. I would have to see the X-rays. I don't
5 recall.

6 Q. Okay. I will hand you these and you can
7 grab the film.

8 MS. O'BRIEN: You are looking for
9 December of '91?

10 THE WITNESS: Yes, I have the
11 before and afterwards.

12 MR. MISHKIND: Why don't we go off
13 the record for a second.

14 MR. HERSCH: We are off.

15 - - - -

16 (Thereupon, HUH Deposition
17 Exhibit 14 was mark'd for

18
19 purposes of identification.)

20 - - - -

21 Q. Doctor, while we were off the record, you
22 had a chance to look through some films and we
23 found a post reduction film on December 17th; is
24 that correct?

25 A. Yes.

1 Q. Okay. And you have that up on the
2 right-hand side?

3 A. Yes. On the right side we have a
4 post-manipulation X-ray.

5 Q. And which bone were you mostly concerned
6 about that caused you to do the manipulation?

7 A. It was the radius.

8 Q. Okay. And are you satisfied with the
9 reduction that you were able to obtain from the
10 manipulation?

11 A. Yes. It looked much better.

12 Q. Was there any continued angulation as of
13 December 17th?

14 A. There was a slight angulation on the radius
15 part. I can see that there was very slight
16 angulation. Before it was obvious angulation.

17 Q. And is that, what, the dorsal angulation?

18 A. Yes.

19 Q. Both fractures; correct?

20 A. If you see ulna, it's almost straight here,

21 Q. Now, so you are saying the ulna does not
22 have dorsal angulation as of December 17th?

23 A. Very minimal. Again, I shall say very,
24 very minimal.

25 Q. Okay. And the purpose then that you had in

1 terms of putting the patient in the cast was to
2 maintain what reduction you are able to get
3 through your manipulation?

4 A. Yes.

5 Q. Okay. We know, though, that she continued
6 to have increasing amount of angulation and
7 increasing problems as 1992 went on, based upon
8 the serial X-rays that were taken?

9 A. Yes,

10 Q. Okay. So that the manipulation that you
11 did in December, while it may have been well
12 intentioned, it didn't solve the problem, did it?

13 A. Oh, no, no, we are -- and she also knew
14 that too.

15 Q. Okay. Now --

16 MS. O'BRIEN: Howard, it's a
17 quarter to 3:00.

18 MR. MISHKIND: I am about two
19 minutes from being done, Cheryl.

20 Q. Doctor, we have a pretrial to go to, so you
21 and I are going to be parting ways momentarily. I
22 am going to be completing the deposition. I just
23 want to ask you just a couple final questions.

24 The last visit you had in December of 1992,
25 did you at that time tell Kathy Wenzel that you

1 were still willing to do the surgery for her?

2 A. Yes.

3 Q. And that you were still willing to do the
4 surgery free of charge?

5 A. Yes,

6 Q. Okay. We know in your office records and
7 we know in the hospital records that there is
8 never a mention of your offer to do the surgery
9 free of charge.

10 My question to you is, did you ever write a
11 letter to Kathy or did you ever have anyone
12 present with you when you made this offer to do
13 the surgery free of charge?

14 A. I have never written any letter to her, but
15 I am sure a nurse or a cast room technician was
16 there whenever I mentioned this to her.

17 Q. Can you tell me the name or the title of
18 anyone that you specifically remember being
19 present during any one or more of your offers?

20 A. I cannot recall, because sometimes we have
21 other nurses, but most of the time it's the cast
22 room technician.

23 Q. Is it the same casting technician all the
24 time?

25 A. Yes.

1 Q. Have you ever -- is that same casting
2 technician at the hospital now?

3 A. Yes,

4 Q. Who is that casting technician?

5 A. Felix Vasquez.

6 Q. Felix is the first name?

7 A. Yes.

8 Q. Vasquez?

9 A. Vasquez, yes.

10 Q. Have you inquired of Felix as to whether he
11 heard your specific offers to do the surgery free
12 of charge?

13 A. No. I never discussed it with him,
14 anything about this patient.

15 Q. Okay.

16 MR. MISHKIND: Doctor, I have no
17 further questions for you. I thank you
18 very much for your time.

19 MS. O'BRIEN: He will read.

20 (Deposition concluded at 2:45
21 o'clock p.m.; signature not waived.)

22

8 I, Vivian L. Gordon, a Notary Public within
9 and for the State of Ohio, duly commissioned and
10 qualified, do hereby certify that the within named
11 JUNG HUH, M.D., was by me first duly sworn to
12 testify to the truth, the whole truth and nothing
13 but the truth in the cause aforesaid; that the
14 testimony as above set forth was by me reduced to
15 stenotypy, afterwards transcribed, and that the
16 foregoing is a true and correct transcription of
17 the testimony.

18 I do further certify that this deposition
19 was taken at the time and place specified and was
20 completed without adjournment; that I am not a
21 relative or attorney for either party or otherwise
22 interested in the event of this action.

23 IN WITNESS WHEREOF, I have hereunto set my
24 hand and affixed my seal of office at Cleveland,
25 Ohio, on this 10th day of February, 1995.

19 
20 Vivian L. Gordon, Notary Public
21 Within and for the State of Ohio

22 My commission expires May 22, 1999.
