

IN THE COURT OF COMMON PLEAS  
OF CUYAHOGA COUNTY, OHIO

CASE NO. 397309

**COPY**

BESSIE M. BROOKS, individually  
and as Administrator of the  
Estate of LEE THOMAS BROOKS,

Plaintiff,

vs.

THE CLEVELAND CLINIC FOUNDATION,  
et al.,

Defendants.

---

1150 Campo Sano  
Miami, Florida  
Friday, November 17, 2000  
12:30 p.m.

DEPOSITION OF MOISES JACOBS, M.D.

Taken before CAROL LENETT, Shorthand Reporter  
and Notary Public in and for the State of Florida at  
Large, pursuant to a Notice of Taking Deposition filed  
in the above cause.

## A P P E A R A N C E S:

1 Thereupon:

2 MOISES JACOBS, M.D.

3 was called as a witness and, after having been first duly  
4 sworn, was examined and testified as follows:

5 DIRECT EXAMINATION

6 BY MR. MISHKIND:

7 Q. Would you please state your full name for the  
8 record.

9 A. Moises Jacobs.

10 Q. You are a physician, correct?

11 A. Yes .

12 Q. Doctor, your place of birth is Havana, Cuba,  
13 true?

14 A. Yes .

15 Q. You're a United States citizen, true?

16 A. Yes .

17 Q. You have had your deposition taken before,  
18 true?

19 A. Yes.

20 Q. Do you have available in your office a  
21 current curriculum vitae that you could provide me?

22 A. We can ask.

23 MR. MISHKIND: We will go off the record for  
24 a moment.

25 (Brief interruption.)

1 BY MR. MISHKIND:

2 Q. How many years have you been doing  
3 medical-legal reviews?

4 A. I don't know. Probably less than five or  
5 six. I really don't remember.

6 Q. You've been asked that question before in  
7 depositions, true?

8 A. Not how many years I've been doing it, no.

9 Q. You haven't?

10 A. No.

11 Q. How many cases have you reviewed over the  
12 number of years that you have been reviewing cases?

13 A. I get to see a lot of cases. So I guess I  
14 review a lot of cases, but I don't take many on.

15 Q. Let's talk over a five-year period.

16 Tell me how many cases over a five-year  
17 period you have reviewed?

18 A. 30 or 40 maybe.

19 Q. Of those 30 to 40 cases, what percent of them  
20 have been for the defense?

21 A. Most of them for the defense.

22 Q. When you say, "most of them for the defense"  
23 in excess of 80 percent for the defense?

24 A. No, because when I review them I may not take  
25 them on when -- depending on the case.

1 Q. Well, specifically, Doctor, when you're asked  
2 to review cases tell me of the cases that you have  
3 reviewed, the 30 to 40 percent of those cases, how many  
4 of them have been reviewed regardless of what your  
5 ultimate conclusions are? How many of them have you  
6 reviewed at the request of defense attorneys?

7 A. I think probably three-fourths, more or less.

8 Q. When you use the term 80 percent, would that  
9 be a fair statement?

10 A. That's a pure guess. I could tell you the  
11 majority but it's a guess.

12 Q. When you testified before, you weren't  
13 guessing as to the percent, were you?

14 A. I would tell people that I'm not sure what  
15 the number is.

16 Q. So that your testimony would be that you  
17 probably reviewed, as opposed to guessing, that you  
18 probably reviewed three-fourths to 80 percent for the  
19 defendant?

20 A. Probably, yes, sir.

21 Q. So that's an accurate statement?

22 A. Probably yes, sir.

23 Q. You have never testified at trial for a  
24 plaintiff in a medical malpractice case, have you?

25 A. I have.

1 Q. Is that very recently?

2 A. I think either last year or the year before.

3 Q. Last year as in 1999?

4 A. Right. I think it was 1999.

5 Q. And what state or county was that?

6 A. Washington, D.C.

7 Q. Who was the attorney that you were working  
8 for in that case?

9 A. That I don't remember, sir.

10 Q. What was the name of the patient?

11 A. I don't remember. I have to go back and look  
12 at them.

13 Q. You have a record of that?

14 A. Probably my secretary, yes.

15 Q. That's the only plaintiff's case that you  
16 ever testified in trial on behalf of the plaintiff, true?

17 A. Yes.

18 Q. You believe that was sometime in 1999?

19 A. I think so, yes, sir.

20 Q. Assuming we have enough time, and we're not  
21 rushed at the end of the deposition, I would like you to  
22 have your secretary check and find out the name of the  
23 attorney that you did work for.

24 A. Yes.

25 Q. You have testified at trial on behalf of

1 doctors in the past, true?

2 A. Yes, sir.

3 Q. How many times have you testified in trial?

4 A. Just before you asked me that question I was  
5 trying to remember because I figured it would be coming.  
6 Six or seven, maybe.

7 Q. How many times have you testified at  
8 deposition?

9 A. Depositions are more than that. I don't keep  
10 records of that.

11 Q. I'm not suggesting you necessarily keep  
12 records, but since you've been deposed before I would  
13 assume that when that question is asked, and I'm not  
14 coming up with a unique question, that you have given  
15 answers under oath in response to those questions, and  
16 I'm asking you the same way, in terms of what is the  
17 estimate, if you will, in terms of the number of times  
18 that you've testified at deposition?

19 A. Probably the estimate, 25.

20 Q. Other than the one case that you testified in  
21 Washington, D.C. as plaintiff's expert, have you ever  
22 given a deposition in a plaintiff's case where your  
23 deposition was taken as a plaintiff's expert?

24 A. There was one other case that I can recollect  
25 and I don't remember the name of the lawyer.

1 Q. Do you remember how many years ago that was?

2 A, Maybe three or four.

3 Q. Was it here in Florida?

4 A, Yes,

5 Q. Was it in Dade County?

6 A. The case?

7 Q. Yes.

8 A, The deposition was here in Dade County.

9 Q. Where was the case filed?

10 A. That -- I don't remember that either. I  
11 don't remember. There was a case in California, I'm  
12 trying to remember if that is the one but I can't give an  
13 accurate statements.

14 Q. Is it fair to say of the approximate 25  
15 depositions that you've given, twice you've testified at  
16 deposition as a plaintiff's expert, the one that you  
17 testified at trial in Washington, and this other case  
18 that might possibly be a California case?

19 A. I don't know if it's accurate but it's fair.

20 Q. If I'm over --

21 A. By one or two at the most.

22 Q. Fair enough.

23 You worked with attorneys up in Ohio, true?

24 A. Yes.

25 Q. You worked with the Reminger & Reminger firm

1 in the past?

2 A. Yes .

3 Q. And Reminger & Reminger sent you a number of  
4 cases, true?

5 A. Yes, sir.

6 Q. You testified previously that they have sent  
7 you tough cases, haven't they?

8 A. Yes .

9 Q. How many times, in fact, have you been called  
10 upon by the Reminger & Reminger firm to review cases?

11 A. Ten. That's a guestimate also.

12 Q. Is that a reasonable estimate? Might be off  
13 by either one or two either way?

14 A. Probably.

15 Q. How many times have you worked with  
16 Mr. Kelley before?

17 A. I met him on one other case. I don't  
18 remember if you were the lawyer for --

19 MR. KELLEY: Just so you're aware Howard, I  
20 hopped on a case when I was at Jackson, Maynard with  
21 Peter Vuadouris. That's where he met me. I was at the  
22 table but he never questioned me.

23 BY MR. MISHKIND:

24 Q. Do you remember the name Vuadouris?

25 A. Difficult to forget Peter.

1 Q. I'll stipulate to that.

2 In any event, it's most likely the situation  
3 where you met Mr. Kelley?

4 A. I'm pretty sure. It has to be, yes.

5 Q. Has Mr. Kelley sent over cases to review  
6 other than the Brooks case?

7 A. I can't -- I'm going to ask him because I  
8 can't remember.

9 Q. Just do the best you can because I'm taking  
10 your deposition, not Mr. Kelley's.

11 A. I'm going to say no.

12 Q. But you were acknowledging that you have been  
13 sent approximately ten cases by the Reminger & Reminger  
14 firm, true?

15 A. Yes, sir.

16 Q. You have given depositions in other cases for  
17 the Reminger & Reminger firm, true?

18 A. Yes, sir.

19 Q. And, in fact, you testified at trial up in  
20 Ohio as an expert defending a doctor that the Reminger &  
21 Reminger firm was defending, true?

22 A. Yes, sir.

23 Q. Tell me --

24 MR. KELLEY: I was at Jacobson Maynard at the  
25 time.

1                   THE WITNESS: I don't keep track of firm's  
2 name, I apologize. I don't know if it was Reminger &  
3 Reminger or Jacobson and Maynard, but I have testified up  
4 in Ohio. I think I testified three times in Ohio, and it  
5 was two and half years ago, to the best of my  
6 recollection.

7 BY MR. MISHKIND:

8           Q. All of these cases were defending doctors,  
9 true?

10          A. Yes, sir.

11          Q. How many cases do you believe you reviewed  
12 over the years for the Jacobson, Maynard law firm?

13          A. Probably included in those ten -- I included  
14 everything from my -- in my mind what was Jacobson or  
15 Reminger, I didn't differentiate.

16          Q. Do you know how it is that the Jackson,  
17 Maynard firm or the Reminger & Reminger defense firm got  
18 your name?

19          A. They sent me a case about three or four years  
20 ago or five years ago, whenever it was, and they liked  
21 the way things came out, and they thought I made a good  
22 witness, I guess.

23          Q. That was one of those tough cases they sent  
24 you, true?

25          A. I think so.

1 Q. In fact, Doctor, you've reviewed cases for  
2 attorneys in other states besides Florida and Ohio, true?

3 A. Yes.

4 Q. You indicated Washington, D.C. and  
5 California, true?

6 A. Yes, sir.

7 Q. How many other states have you actually  
8 testified in cases that were pending in those other  
9 states?

10 A. Trial.

11 Q. Trial or deposition?

12 A. I know there was one in Georgia, a deposition  
13 from Georgia. I'm sure there are a couple more, sir.  
14 Not too many.

15 Q. Your charge for today for your deposition is  
16 how much?

17 A. Usually it's \$500 an hour.

18 Q. Am I going to be charged the usual rate or am  
19 I going to be charged a different rate?

20 A. Usual. Going to be charged usual and  
21 customary.

22 Q. And your charge for review of medical-legal  
23 matters is it still \$400 an hour?

24 A. Yes.

25 Q. That's how much you've been charging

1 Mr. Kelley, \$400 an hour?

2 A. That's correct. I really don't know.

3 MR. KELLEY: If you charged me five, I'll ask  
4 for a refund.

5 BY MR. MISHKIND:

6 Q. I'm asking what you charge.

7 A. Between 4 and \$500, basically.

8 Q. And your charge for trial testimony, what is  
9 your charge per day for trial testimony?

10 A. Probably about \$5,000 per day.

11 Q. In fact, you charge somewhere between \$5,000  
12 and \$7,000 a day, depending upon the case, correct?

13 A. That's true yes, sir.

14 Q. You also get paid travel expenses on top of  
15 that, true?

16 A. Yes, sir.

17 Q. Have you at any time advertised your services  
18 as an expert witness?

19 A. No.

20 Q. Have you made your name available to any  
21 companies that provide expert witnesses?

22 A. No, sir.

23 Q. I have a report that was written by you on  
24 October 11 to Mr. Kelley. It's a two-page report.

25 Is that two-page report, dated October 11,

1 the only letter that you've written to Mr. Kelley?

2 A, Yes, sir,

3 Q. There is nothing else that you've written to  
4 him since or before?

5 A, No.

6 MR. KELLEY: Except maybe a bill,

7 BY MR. MISHKIND:

8 Q. Other than billing?

9 A, I didn't write it though.

10 Q. Tell me prior to October 11 when you were  
11 first engaged to participate in this case?

12 A, Maybe one or two months before that,

13 Q. You have all the material with you today that  
14 you have reviewed?

15 A, Yes.

16 Q. In a moment I'm going to take a look at that,  
17 You don't have to pull it up yet.

18 You got your entire file with you today?

19 A, Yes, sir,

20 Q. Has anything been removed from the file in  
21 terms of content of material that you have reviewed?

22 A. No, One of the notebooks that was individual  
23 pages it fell apart and all the pages are there now.

24 MR, KELLEY: The medical records fell apart,  
25

1 BY MR. MISHKIND:

2 Q. During your meeting with Mr. Kelley, were  
3 there any items that were removed by way of written  
4 documents?

5 A e No.

6 Q. Have you been provided with any summaries of  
7 any of the deposition testimony?

8 A. There is some depositions there, and I don't  
9 think we have any summaries in them.

10 Q. When is the last time you testified in trial  
11 anywhere?

12 A. Probably the Washington, D.C. case,

13 Q. When was the last time your deposition was  
14 taken?

15 A. Maybe sometime last year. It may be a while  
16 since the last deposition. I don't remember exactly,  
17 sir.

18 Q. Did you testify at trial in the Hollick case?

19 A, No, The Hollick case. Dr. Hollick?

20 Q. Right.

21 A. No.

22 Q. You remember your deposition being taken in  
23 that case?

24 A, Yes, Is that last year by the way?

25 Q. Do you remember your deposition being taken

1 since then?

2 A. I don't remember. May have. Maybe sometime  
3 early this year. I really don't know.

4 Q. Fair enough.

5 How many cases in the year 2,000 have you  
6 been asked to review?

7 A. Six.

8 Q. Do you have six active cases currently that  
9 you're involved in in one way or another?

10 A. What happens is somebody might send me a  
11 report, and three months later they say, you know, we  
12 settled that case. So probably right now I think there  
13 are two other cases.

14 Q. And the Brooks case is the third?

15 A. I'm trying to think because -- yes, sir.

16 Q. And the other two cases are defense cases,  
17 true?

18 A. Yes.

19 Q. When you wrote your report to Mr. Kelley,  
20 there were no references to any depositions having been  
21 reviewed in the October 11, letter, true?

22 A. If I didn't write them, they were not  
23 reviewed at the time.

24 Q. Have you reviewed any depositions in the  
25 October 11 report?

1           A.    Yes, sir.

2           Q.    In a moment I'll take a look at the material  
3 and we will summarize on the record.

4                   I want to find out in terms of preparing this  
5 report what information you relied on.

6                   Am I correct in stating on the record that  
7 you were relying on the hospital records as opposed to  
8 the hospital records plus deposition testimony?

9           A.    Correct.

10          Q.    The curricular vitae that you handed to me is  
11 current as of November '99.

12                   You are a laparoscopic surgeon, true?

13          A.    A general surgeon.

14          Q.    Your surgeries are laparoscopic, true?

15          A.    Yes, sir.

16          Q.    Tell me what percent of your surgery by  
17 circumstance happens to be laparoscopic?

18          A.    Probably 60 percent.

19          Q.    Have you ever had your privileges revoked,  
20 suspended or brought into question?

21          A.    No.

22          Q.    You have been named as a defendant in a  
23 medical malpractice case in the past, true?

24          A.    Yes, sir.

25          Q.    One time?

A, Three times, I think,

2 Q. Do you have any cases currently pending  
3 against you?

4 A. There is one where I was a second assistant  
5 in a patient that had a previous gallbladder a week  
6 prior. They took her to surgery and two surgeons, I was  
7 not involved with that patient at all, and in the middle  
8 of the case they call me in to help the patient.

9 I was there for an hour and a half and never  
10 saw the patient before, never saw the patient after, and  
11 never named. Everyone in the lawsuit was trying to get  
12 me out of it.

13 Q. You feel you should not be in that case?

14 A, Not in that way, no, sir,

15 Q. Is there anything more pending against you  
16 also?

17 A. I hope not.

18 Q. The others that were filed against you have  
19 since been resolved?

20 A. Yes, sir.

21 Q. One the case was settled, true?

22 A. Yes, sir.

23 Q. Monetary payment was made in that case?

24 A. Yes.

25 Q. What about the other case?

1           A.     Settled also.

2           Q.     In your CV you have a number of speaking and  
3 teaching appointments that are referenced, true?

4           A.     Yes, sir,

5           Q.     And a number of publications, true?

6           A.     Yes, sir.

7           Q.     Do any of the speaking engagements or  
8 publications have any relevance, in your opinion, to any  
9 of the issues that are pertinent or material to this  
10 case?

11          A.     I don't understand, I'm sorry. Say it again.

12          Q.     I'll break it down into maybe a smaller  
13 portion.

14                 Of the publications that you authored  
15 yourself or co-authored, are any of them relevant to the  
16 subject matter of the opinions that you hold in  
17 Mr. Brooks' case?

18                 If ou need to look at your CV to answer that  
19 question, I'll be happy to hand it to you,

20          A.     Probably not directly related to this case.

21          Q.     Is there any indirect relationship to any of  
22 the issues that you intend to testify to at the trial  
23 next month in Cleveland that have any relevance to --

24          A,     That's why I hesitate a little bit because  
25 sometimes you give a lecture about complications and one

of those complications is bleeding, et cetera, and that's why I hesitated in saying yes or no.

Q. Why don't we do this. Why don't I mark this as Plaintiff's Exhibit 1 and hand it to you, we'll go off the record and you'll look at this, and I'll also take a look at your material in the meantime, and we will try and kill two birds with one stone.

(Brief recess,)

(Thereupon, the document referred to was marked for identification as Plaintiff's Exhibit 1.)

BY MR. MISHKIND:

Q. Doctor, you have had a chance to look at Plaintiff's Exhibit 1, which is a copy of your CV, true?

A. Yes, sir,

Q. And I think my question was to ask you whether any of the publications or speaking and testifying points have any relevance to the subject matter that you are providing expert opinions in?

A. I don't think they do, no.

Q. That would be directly or indirectly, true?

A. Some of those complications, some of these lectures on complications, and I'm sure those complications are through bleeding, but basically, yes, it would be a very, very small amount of a relation.

Q. You would certainly stand by what you have

1 stated in these publications if there are statements in  
2 there about post-operative bleeding, true?

3 A. Yes.

4 Q. Have you reviewed any medical literature in  
5 formulating any of the opinions that you expressed in  
6 your report?

7 A. No.

8 Q. Are there any studies or articles or book  
9 chapters that you believe to be subjective of any of the  
10 opinions that you have expressed in your report?

11 A. No.

12 Q. As far as material that you have reviewed  
13 relative to medical literature, have you reviewed  
14 anything since your October 11 report?

15 A. No.

16 Q. Do you intend to do any medical literature  
17 review between now and the time of trial?

18 A. I don't think so, no.

19 Q. I'm again referring to your report, dated  
20 October 11.

21 You were kind enough to let me take a look at  
22 the material that you have been provided, and I see the  
23 volume of records which have sort of come out of their  
24 hinges. Is that what you had when you prepared your  
25 report, true?

1           A.    Yes, sir.

2           Q.    You have a number of depositions that have  
3 been sent to you since your October 11 report, true?

4           A.    Yes, sir.

5           Q.    Have you read all those depositions over?

6           A.    I read one or two total and completely. The  
7 rest I skimmed because it's just -- I've skimmed most of  
8 them.

9           Q.    Let me ask you, are you in a position if I  
10 ask you specific questions about testimony in each of the  
11 depositions, and I will acknowledge for the record that  
12 it appears that these depositions were sent to you by  
13 Federal Express on November 7, which would be ten days  
14 ago, at least they left Cleveland on November 7. When  
15 they arrived here I'm not sure.

16          A.    They came in batches. I think the last one  
17 was a week ago but they came in batches.

18          Q.    And you have a number of depositions in the  
19 November 7 Federal Express, and have you reviewed those  
20 depositions that came down on November 7?

21          A.    I reviewed enough to be able to answer.

22          Q.    I don't see that you have a copy of the  
23 deposition of Nurse Martinez.

24          A.    I reviewed the nurse that is from India. I  
25 don't remember ever reading Martinez.

1 Q. Do you know who Nurse Martinez is?

2 MR. KELLEY: I don't think I have Martinez'  
3 depo. Have you gotten it?

4 MR. MISHKIND: Sure.

5 MR. KELLEY: I got them piecemeal and  
6 I don't know why but I don't know if I received it yet,  
7 to be honest.

8 BY MR. MISHKIND:

9 Q. In any event, I did from the court reporter.  
10 You obviously have not seen Nurse Martinez' deposition,  
11 true?

12 A. No.

13 Q. As you sit here now, do you know who Nurse  
14 Martinez is?

15 A. I know there was a nurse that was taking care  
16 of the patient, and I think her name was Martinez.

17 Q. When was that nurse, according to your  
18 review, taking care of Mr. Brooks?

19 A. I think the day that they put the peg in.  
20 One of those shifts. When I read the nurse's notes, I  
21 think I saw Martinez. I have to go back and check.

22 Q. As you sit here now, do you know what shift  
23 that nurse was involved, Nurse Martinez?

24 A. Probably the shift before the lady from  
25 India, I don't remember the name, the Indian nurse

1 worked.

2 Q. Other than the depositions which you have  
3 reviewed, and you read over Dr. Grunfist?

4 A. Yes.

5 Q. Do you know Dr. Grunfist?

6 A, No, sir.

7 Q. Do you know her by reputation?

8 A. No.

9 Q. Let me ask you, to save some time, do you  
10 know any of the doctors that depositions you have  
11 reviewed?

12 A, No.

13 Q. Dr. Brezinski, is a gastroenterologist. Do  
14 you know Dr. Brezinski?

15 A. No.

16 Q. Do you know Dr. Preston, whose deposition I  
17 see is in the material?

18 A. I do not.

19 Q. Have you ever lectured at Cleveland Clinic  
20 Foundation?

21 A, No .

22 Q. Do you know any physicians from the Cleveland  
23 Clinic Foundation?

24 MR. KELLEY: In Cleveland or Florida?

1 BY MR. MISHKIND:

2 Q. In Cleveland. Thank you.

3 A. I know some physicians, but I don't know them  
4 personally, but I know it's a wonderful clinic and  
5 they're all very reputable.

6 Q. You recognize, even though it's a wonderful  
7 facility, and they're all reputable, that doctors at the  
8 Cleveland Clinic, as well as doctors at any other  
9 institution, can make mistakes?

10 A. Yes, sir.

11 Q. When they makes mistakes, they should be held  
12 accountable and responsible for their mistakes, true?

13 A. I agree with that.

14 Q. If mistakes in diagnosis or treatment led to  
15 the death of a patient, that institution as good as it  
16 may be, should be held accountable, true?

17 A. Yes, sir.

18 Q. Now, Cleveland Clinic, Fort Lauderdale, do  
19 you have any association or relationship to --

20 A. I know them from reputation, but that's about  
21 it.

22 Q. You're not a gastroenterologist, are you?

23 A. No, sir.

24 Q. Board certified in general surgery, correct?

25 A. Yes, sir.

1 Q. Are you board certified in trauma?

2 A. No .

3 Q. You board certified in vascular surgery?

4 A. No, sir.

5 Q. Do you know Dr. Joseph Dimine?

6 A. No.

7 Q. You read his reports over or have you read  
8 his report?

9 A. I don't think I read his report.

10 Q. Were you aware that there was a surgeon  
11 involved in this case that has provided opinions on  
12 behalf of the plaintiff?

13 A. I knew there was a plaintiff's expert, yes,  
14 sir.

15 Q. How many experts are you aware of from the  
16 plaintiff's side?

17 A. I know that there was a rheumatologist, and I  
18 knew of the surgeon, but I haven't read his report, you  
19 know. I can tell you something, I have a lot of trouble  
20 remembering these people's names. They're all weird  
21 names. It's not Jones or Smith. So my mind -- and  
22 sometimes I get them mixed up. So I apologize if I'm  
23 slow in answers.

24 Q. Doctor, the only reason I'm asking these  
25 questions, you realize that serving as an expert witness

1 is an important role, correct?

2 A. Yes.

3 Q. And that the foundation for your opinions is  
4 something that is important before arriving at an  
5 opinion, true?

6 A. Yes.

7 Q. Just like the foundation for working up a  
8 patient and arriving at sufficient information to make a  
9 diagnosis before you treat a patient, there are certain  
10 steps that have to be taken, correct?

11 A. Yes, sir.

12 Q. There are certain circumstances where you  
13 have more time to act and certain circumstances where the  
14 diagnosis can be quicker depending on the gravity of the  
15 situation, true?

16 A. Yes.

17 Q. And if a patient has an intra-abdominal bleed  
18 that can kill the patient, obviously the gravity of that  
19 situation demands that the diagnosis be made as quickly  
20 as possible, true?

21 A. Yes, sir.

22 Q. And that definitive and appropriate treatment  
23 be provided as quickly as possible, correct?

24 A. Yes, sir.

25 Q. And you have no doubt that the Cleveland

1 Clinic Foundation had the wherewithal to make the right  
2 diagnosis and treat the patient in a timely manner; do  
3 you?

4 A. Do I have a doubt?

5 Q. Do you have a doubt that they had the ability  
6 to make the right diagnosis and treat the patient in a  
7 timely manner?

8 A. No.

9 Q. And that diagnosis and treatment, they had  
10 the ability to make that diagnosis whether it was in the  
11 middle of the night or the middle of the day, true?

12 A. True.

13 Q. You are not a board certified internist, are  
14 you?

15 A. No.

16 Q. You are not a board certified rheumatologist,  
17 correct?

18 A. No, sir.

19 Q. Nor are you a board certified neurologist,  
20 correct?

21 A. No.

22 Q. You don't treat patients with polymyositis,  
23 true?

24 A. Not as a primary doctor, no, sir.

25 Q. And I take it you're not intending to provide

1 opinions on the issue of the long term prognosis for  
2 Mr. Brooks had he survived the incident in which we are  
3 here to talk about; is that correct?

4 A. I think he was a very sick man but I don't  
5 know much about the disease itself, no, sir.

6 Q. Do you intend to provide an opinion how long  
7 Mr. Brooks would have lived had he not sustained the  
8 multi-system organ failure?

9 A. No, sir.

10 Q. Are you intending to provide any opinion as  
11 to what the quality of Mr. Brooks' life was immediately  
12 before coming into the hospital?

13 A. In that regard the answer is yes. He was  
14 very sick when he came to the hospital. He didn't have  
15 much quality.

16 Q. How long had he been, according to your  
17 review, poor quality of life?

18 A. Poor quality is a very subjective term. What  
19 I'm referring to is that he was not always alert and  
20 oriented, and he had a lot of difficulty with  
21 polymyositis. Was not comfortable. He was -- from the  
22 review of records, and from what I could gather, he  
23 wasn't such a happy man, and I don't know how long that  
24 was going on.

25 Q. How long had he had difficulty with the

1 polymyositis according to your review as an expert in  
2 this case?

3           **An**     I have to go back and look at the records.  
4 They mention several times. It's been going on for a  
5 while, I have to look and see,

6                   I think from looking back, and looking at the  
7 physical, approximately a month before he came -- been in  
8 the hospital,

9           **Q.**     You've never talked with the family of  
10 Mr. Brooks, true?

11           **A.**     No, sir,

12           **Q.**     You've not seen the deposition transcript  
13 from the family either?

14           **A,**     No.

15           **Q.**     As far as the quality of life that he had or  
16 the enjoyment of life that he had and his family had  
17 prior to his entering the hospital, you cannot comment at  
18 all about what Mr. Brooks' life was like as a 65-year old  
19 gentleman?

20           **A,**     I can only comment, and these are very  
21 subjective ideas, he was -- he used to abuse alcohol in  
22 the past. So I think that your past was not so happy at  
23 times, and then the fact that he's been sick with  
24 multiple problems, including heart bypass, and the fact  
25 he has myositis, and not always alert and sometimes

1 confused and complains of pain and not cooperative.

2 Q. What?

3 A. Sometimes he was not cooperative with the  
4 doctors and staff. That's what I'm referring to. You  
5 asked the quality of life and that's it. Not in any  
6 other terms.

7 Q. You would certainly agree with me that the  
8 person in the best position to talk about the quality of  
9 life that Lee Brooks enjoyed would be family members?

10 A. Yes.

11 Q. You talk about abusing alcohol.

12 Was Mr. Brooks having problems with alcohol  
13 that was in any way, shape or form, affecting the quality  
14 of his life in 1998?

15 A, I don't know, I can't answer that. I'm just  
16 stating that he had an alcohol abuse in the past

17 Q. Let me reverse that and ask you whether or  
18 not you have any evidence that would permit you under  
19 oath to suggest that Mr. Brooks' quality of life and his  
20 well being was negatively impacted in 1988 as a result of  
21 the alcohol?

22 A. I don't know if in his case his alcohol abuse  
23 led to multiple other problems, medical problems in that  
24 regard. That's the only --

25 Q. Can we agree that based upon what you have,

1 and as you're sitting as an expert about to testify in  
2 this trial we have in less than a month, that you can't  
3 indicate, to a reasonable degree of probability, that the  
4 alcohol that was historical in nature was having any  
5 adverse affect on Mr. Brooks in May and June of 1998,  
6 true?

7 A. I don't -- I can state, again going back to  
8 the time that he had some type of confusion and he was  
9 not cooperative, I don't know if that's a result of the  
10 alcohol or not.

11 Q. Do you have any basis to state to a  
12 probability that it was or can we agree, as you sit here  
13 today, that you have no medical basis to state to a  
14 probability that Mr. Brooks' existence and quality of  
15 life in May and June of '98 were being negatively  
16 impacted by a past history of alcohol?

17 A. The answer to that is, I don't know.

18 Q. Fair enough.

19 Have you been asked, besides literature,  
20 which we talked about, have you been asked to review any  
21 additional materials between now and the time of trial?

22 A. No, sir.

23 MR. KELLEY: The only thing as the depos keep  
24 coming in, I don't have the family members depos yet  
25 either, but as they keep coming in I'll keep sending

1 those down.

2 BY MR MISHKIND:

3 Q. Doctor, I would ask, just for the record, and  
4 as a housekeeping matter, if any of the opinions that you  
5 intend to provide at trial should be changed in any  
6 respect by what you learn from those depositions, would  
7 you please immediately advise Mr. Kelley so he can let me  
8 know before -- certainly before you fly up to Cleveland  
9 and take the witness stand?

10 A. Yes, sir.

11 Q. The purpose of my deposition here today is to  
12 find out the opinions you hold and the basis for those  
13 opinions. Not to find out about that after the direct  
14 examination has been finished by Mr. Kelley, fair enough?

15 A. Yes, sir.

16 Q. Doctor, have you ever inserted a peg tube?

17 A. No, sir.

18 Q. Have you ever been called upon to perform an  
19 exploratory laparotomy on a patient that had a  
20 complication following a peg tube?

21 A. Yes, sir.

22 Q. On how many occasions?

23 A. Again, I'm going to guess. I would tell you  
24 seven cases over the last maybe once a year, once every  
25 two years. Maybe ten cases over the last ten years.

1           Q.   Any cases that you've experienced over those  
2 years similar in any respect to Mr. Brooks?

3           A.   No, sir.

4           Q.   Did any of those patients that you were  
5 called upon to do exploratory laparotomies for I presume  
6 for intra-abdominal bleed?

7           A.   They were not for intra-abdominal bleed.  
8 These were for -- they were like a gastrotomy tube had  
9 pulled away, and we have an open tube on the abdominal  
10 cavity, basically.

11          Q.   Have you been called upon to do an  
12 exploratory laparotomy where there was an intra-abdominal  
13 hemorrhage following a peg tube placement?

14          A.   I have been called to evaluate patients who  
15 had some -- thought that they were bleeding  
16 intra-abdominal after peg tubing.

17          Q.   What steps did you take to evaluate those  
18 patients?

19          A.   The way that the diagnosis was made, if I  
20 remember, because it's not a very common occurrence and  
21 it only happened to me once. We order a cat scan, and  
22 the cat scan showed obviously bleeding, obvious blood  
23 from that place but the patient just stabilized, stopped  
24 bleeding, and we didn't take him to surgery.

25          Q.   Where was the bleeding coming from?

1           A.    We didn't take him to surgery, So we don't  
2 know.

3           Q.    At the time that cat scan was done the  
4 patient had already stabilized?

5           A.    I think -- I don't know if it happened at  
6 the time that it was done or right during this time.  
7 When we decided what to do we noticed he stabilized and  
8 we stopped.

9           Q.    A cat scan was done on a stat basis, true?

10          A.    Yes, sir.

11          Q.    You were looking to rule out any type of  
12 intra-abdominal hemorrhage, true?

13          A.    Yes.

14          Q.    Or confirm it?

15          A.    Right.

16          Q.    And the fact that the patient stabilized was  
17 a good sign, correct?

18          A.    Yes, sir.

19          Q.    Mr. Brooks never stabilized, did he?

20          A.    I think Mr. Brooks' blood pressure  
21 stabilized. I don't think he as a whole stabilized.

22          Q.    When do you think his blood pressure  
23 stabilized?

24          A.    From looking at the report, the blood  
25 pressure was a hundred, give or take. Sometimes higher

1 or lower. It was around a hundred.

2 Q. He remained in shock, did he not, from 2:20  
3 all the way up to the time that he was taken to surgery?

4 MR. KELLEY: 2:25 you mean.

5 BY MR. MISHKIND:

6 Q. I think it's 2:25.

7 A. I think from 2:25 on Mr. Brooks was a very,  
8 very sick man the whole time.

9 Q. He was in hypovolemic shock from 2:25 on,  
10 true?

11 A. I think so.

12 Q. Do you know how long before 2:25 a.m.  
13 Mr. Brooks was in shock?

14 A. It seems to me from reviewing some of the  
15 notes it happened right around 2:20.

16 2:25 when he started to bleed, the nurses  
17 were there and they caught it very quickly.

18 Q. We will talk about the specifics about that  
19 in a moment.

20 I want to get an overview of the situation  
21 that the patient stabilized and didn't need emergency  
22 surgery.

23 A. Correct.

24 Q. Have you talked to any of the doctors or  
25 nurses that were involved in this case?

1 A. No.

2 Q. Have you consulted with anyone, any one of  
3 your colleagues concerning this case?

4 A. No, sir.

5 Q. In looking at the depositions and the records  
6 I perused through, actually they're more than that. I  
7 leafed through, all six pages. I don't see notes or dog  
8 ears or anything indicating anything highlighted or  
9 pointed out in the review, true?

10 A. Yes.

11 Q. Do you have any written notes that you  
12 prepared as you were reviewing all of the records?

13 A. No, sir. The only thing, but I threw it  
14 away, was I tried to write down some of the times on the  
15 hemoglobins when I started looking at it, but I threw it  
16 away a long time ago, one little sheet of paper.

17 Q. Why did you throw it away?

18 A. It was hanging around and you can see with  
19 all those papers I didn't want more.

20 Q. Did you throw it away or did you lose it?

21 A. Probably threw it away.

22 Q. When you prepared the report, did you prepare  
23 it yourself?

24 A. Yes, sir.

25 Q. Typed it yourself?

1 A. No, sir.

2 Q. Dictated it?

3 A. I actually wrote it out and gave it to my  
4 secretary.

5 Q. Then she gave you back a draft of the report?

6 A. Yes.

7 Q. Then you made some changes to the report?

8 A. I don't remember making any changes to the  
9 report.

10 Q. So the report, once she typed it out, was  
11 exactly how you signed it and sent it to Mr. Kelley?

12 A. As far as I remember.

13 Q. Did you discuss the contents of your report  
14 with Mr. Kelley before signing the report?

15 A. I think -- I don't know. I read it to him.  
16 I don't know if it was after I signed it or before.

17 Q. So you called him up on the phone, told him I  
18 finished reviewing the case, and read to him what you  
19 were about to send up to him, true?

20 A. He actually called me and said he wanted a  
21 report when I was through with it. When I was finishing  
22 the report I called him up.

23 Q. After finishing the report, you called him up  
24 and read him what you were going to send to him, correct?

25 A. Yes, sir.

1 Q. And then proceeded to send the report to him  
2 after your conversation?

3 A. Yes, sir.

4 Q. Given the material I looked at, I don't see  
5 any reference to any cover letter from Mr. Kelley that  
6 would indicate the specific issues that you were asked to  
7 address; is that true?

8 A. I don't remember any cover letter except to  
9 the fact that this is a case, Brooks versus whatever.  
10 That was about it.

11 Q. What is your understanding as to the  
12 assignment or what issue or issues you were asked to  
13 address in this case?

14 A. I thought I was looking at it from the  
15 surgical, I'm a surgeon. He wanted me to look at it from  
16 the surgeon's point of view.

17 Q. Your intent is to testify as it would relate  
18 to the surgical care of this patient?

19 A. Basically, yes. That's what I'm looking at,  
20 the events leading up to it and the surgery.

21 Q. Doctor, based upon your review in this case,  
22 is there any indication in the medical records of any of  
23 the physicians or the nurses contacting general surgery  
24 to consult in this case prior to 5:30 in the morning on  
25 June 5, 1998?

1           A.    I read the depositions where someone said  
2 they contacted earlier but in the medical records all I  
3 saw was 5:30.

4           Q.    Whose deposition is it that you reviewed that  
5 said they contacted general surgery?

6           A.    I think the resident that came into the  
7 floor, the one that resuscitated, that said she told the  
8 nurse to call surgery.

9                   I don't remember the name. I have to look.

10          Q.    Would you agree with me, however, that there  
11 is no indication in the records from any of the nurses or  
12 any of the other physicians that were involved that would  
13 permit you to confirm her statement that general surgery  
14 was contacted prior to 5:30 in the morning, true?

15          A.    That's true.

16          Q.    And there are a number of people there,  
17 nurses, there is a number of residents involved, and none  
18 of them make mention of general surgery being consulted  
19 ASAP until 5:30 a.m., true?

20          A.    I think the comment or the fact that he made  
21 about bleeding, intra-abdominal bleeding, but as far as  
22 calling general surgery the first I see is 5:30.

23          Q.    There is no reference to general surgery  
24 coming up to see the patient either on the medical floor  
25 or the medical intensive care unit at any time earlier

1     than 5:30, true?

2             A.     That's true. As far as I read, it's true.

3             Q.     In fact, from everything that you have  
4     reviewed on general surgery or the resident doctor, the  
5     general surgeon didn't actually come up to see the  
6     patient until some time at or around six a.m., true?

7             A.     According to the medical records it was six  
8     o'clock.

9             Q.     Would you agree with me, that general surgery  
10    should have been contacted prior to 5:30 once it was  
11    determined that Mr. Brooks had an intra-abdominal  
12    hemorrhage?

13            MR. KELLEY: Objection to the part of the  
14    question that is "once it was determined."

15    BY MR. MISHKIND:

16            Q.     Go ahead.

17            A.     The way I look at this record, sir, I'm not  
18    even sure they should have been contacted then. I think  
19    this patient, once this patient arrested and then -- I  
20    think it's stated as hypotension, and went to a full code  
21    in a matter of an hour and a half, two hours, I think  
22    think that patient was not going to survive.

23            Q.     Once the patient arrested your opinion there  
24    was no need to contact surgery?

25            A.     My opinion is that a general surgeon would

1 have made no difference. In fact, when they took him to  
2 surgery he was not bleeding and the patient ultimately  
3 died anyway.

4 Q. We will talk about what was discovered at the  
5 time of surgery, but we can agree that he was not taken  
6 to surgery. He wasn't prepared to go to surgery until  
7 10:45 a.m., correct?

8 A. Correct.

9 Q. He was in the O.R. with the surgery starting  
10 sometime shortly after 11 a.m., true?

11 A. Yes.

12 Q. And general surgery, the resident was not  
13 consulted or did not consult in terms of coming up and  
14 assessing this patient until at least 6 a.m., true?

15 A. Yes, sir.

16 Q. Now, I'm going to ask you again, would you  
17 agree that general surgery should have been consulted  
18 prior to 5:30 with the request for the consultation if,  
19 in fact, it was felt by the medical team that was  
20 treating this patient that the most likely explanation  
21 for his shock and his hypotensive condition was that he  
22 had an intra-abdominal bleed, true?

23 A. My opinion is that general surgery made no  
24 difference in this case.

25 Q. I'm not suggesting for purposes of my

1 question that they did or didn't, but you would agree  
2 with me that there was a point in time where this patient  
3 was being treated by the medical team and had not  
4 arrested, true?

5 A. There is a point in time where he was being  
6 treated, was hypotensive, probably unstabilized but had  
7 not arrested, correct, yes, sir.

8 Q. During that period of time when he was  
9 hypotensive, unstabilized, the vital signs, as well as  
10 his labs, would suggest that the patient was in shock,  
11 true?

12 A. Yes, sir.

13 Q. And the most likely explanation, given the  
14 procedure that had been done earlier that morning, and  
15 given the fact that the EKG did not show that he had a  
16 heart attack, the most likely explanation was an  
17 intra-abdominal hemorrhage, true?

18 A. I think as an ongoing process you don't say  
19 the most likely explanation is hemorrhage.

20 Like I stated a while ago, bleeding from a  
21 peg is very unusual, very, very unusual. This gentleman  
22 had multiple problems that started. He developed acute  
23 hemolysis from his blood from one of the medications. He  
24 had a heart attack that the EKG was normal.

25 What if he threw a pulmonary embolus, what if

1 he was in DIC, and someone commented in their  
2 evaluation --

3 Q. We're going to talk about that, but my  
4 question to you, Doctor, and I appreciate you're bringing  
5 that up, and believe me we're going to talk about those  
6 items.

7 If general surgery was consulted, as is  
8 suggested by one of the doctors at 2:45 to 3:00 a.m. and  
9 the labs were back, there was knowledge that the  
10 patient's hemoglobin had dropped not only by arterial  
11 blood gases but by a CBC from approximately 13.9 in the  
12 afternoon to down to 8.6 to 9, that the patient was  
13 remaining hypotensive, notwithstanding being given a  
14 bolus of saline, that the patient was demonstrating  
15 abdominal distension, and assuming all this information  
16 which would be available was shared with general surgery,  
17 would you expect that a reasonable and prudent general  
18 surgeon would come up and see the patient?

19 A. I guess in the best of all worlds the answer  
20 is yes, of course.

21 Q. And certainly if there is nothing preventing  
22 that general surgeon from coming up to see the patient  
23 with those facts you would agree that the standard of  
24 care would require that general surgery come up to  
25 consult on that patient, true?

1           A.    It all depends on what transpired in that  
2 conversation, because if you're the medical doctor and  
3 you call me as a surgeon and tell me I have a patient who  
4 is very hypotensive, hemoglobin dropped four points, and  
5 we don't know if he had a heart attack, we don't know --  
6 all those other conditions we talked a little while ago,  
7 I would tell you why don't you figure this out before I  
8 even take this man to surgery because I could probably  
9 hurt him a lot more if you're wrong or I'm wrong. I take  
10 the man to surgery with no intra-abdominal bleed.

11           Q.    Once you got the EKG back, and you're  
12 satisfied the patient is not having a heart attack or  
13 some ischemic incident going on, would you agree that  
14 general surgery, with a drop of hemoglobin of that level,  
15 with abdominal distension, with the patient remaining  
16 hypotensive, that general surgery should consult and see  
17 the patient even if it's in the middle of the night?

18           MR. KELLEY: Object. The beginning of your  
19 question is totally contrary to what he told you earlier.  
20 You said if an EKG rules out ischemia. EKG does not rule  
21 out ischemia, Howard, you know that. I don't want that  
22 fact that was a long time ago in the question to be lost.  
23 Barring that objection you can answer.

24           MR. MISHKIND: Before he answers, if the  
25 evidence that one would be looking at to determine

1 whether or not there was an infarction or any myocardial  
2 ischemia going on if that was satisfactorily with by the  
3 medical team, and that the medical team from their  
4 assessment felt that there was an intra-abdominal bleed  
5 as the most likely cause for the patient's hypotension  
6 and shock, and general surgery were contacted in the 2:45  
7 to 3:00 o'clock time period, would you agree that a  
8 reasonable and prudent general surgeon should come up and  
9 see the patient?

10 MR. KELLEY: Objection, you can answer.

11 THE WITNESS: You said something which caught  
12 my ear, but if they said the diagnosis of intra-abdominal  
13 bleed yes, the general surgeon should be contacted. That  
14 is part of the last thing once they made that diagnosis,  
15 but you also referred to abdominal distension, and you  
16 know if every time a patient who is sick like this  
17 gentleman developed abdominal distension and hypotension  
18 they call a general surgeon, you know, they call me to  
19 establish why and what caused it, the distension or --  
20 not just cardiac, ruling out cardiac problems, but all  
21 the other problems.

22 BY MR. MISHKIND:

23 Q. And I don't disagree with you, but if the  
24 medical team that is caring for the patient has  
25 sufficient clinical information, laboratory data,

1 diagnostic studies that have been done, and based upon  
2 the examination of the patient they contact general  
3 surgery and provide all the information that is available  
4 at the time, would you agree that general surgery, even  
5 if it's the resident in the middle of the night should  
6 come up and evaluate and see that patient?

7 A. Because of the resident is why you would have  
8 a general surgeon there so quickly in the middle of the  
9 night.

10 I think that if I was called, okay, whether I  
11 was at home or in the hospital, I want to, okay, find --  
12 let me put that on -- get me an x-ray, you know, let me  
13 know what is going on. You ruled everything out, at  
14 least you're telling me you're ruling it out. I want you  
15 to tell you what I need done. Get me an x-ray of the  
16 abdomen, let's make sure, like we did with my patients,  
17 we got a cat scan. That's --

18 Q. You would want a cat scan?

19 A. I would absolutely want a cat scan done.

20 Q. In fact, if the general surgeon  
21 hypothetically was contacted and given all that  
22 information, and didn't suggest that a cat scan be done,  
23 that would be below the standard of care, wouldn't it?

24 A. No. Just one of the x-rays could be a KUB,  
25 to let me know, yes, if there is an intra-abdominal

1 bleed. A cat scan can do it fast but if it's KUB,  
2 there is no abdomen distension or bowel distension but  
3 you see like a hazy picture, you might think there is  
4 fluid in the abdominal cavity.

5 Q. Why, if you can't get the KUB because there  
6 are problems with other cases going on, and they're  
7 backed up and can't get it down, what do you do under  
8 those circumstances? Do you let the patient continue to  
9 bleed if you have high enough differential that it's an  
10 intra-abdominal hemorrhage?

11 A. During this time, if we're referring to this  
12 case?

13 Q. Yes.

14 A. During this time, and they continue to try  
15 and stabilize this patient, let's see if he has an  
16 intra-abdominal bleed, if you take that patient to  
17 surgery and that status of shock you just talked about,  
18 once they place him on the general anesthesia chances are  
19 he's going to be with a history of cardiac problems, he  
20 doesn't do well, and you might kill that patient if you  
21 take him to surgery before his time.

22 Q. Doctor, he was not responding the kind of  
23 ways you would want to in terms of perfusion with the  
24 saline, was he?

25 A. I think his blood pressure maintained around

1 100, yes, sir.

2 Q. Did this patent need transfusions? Blood  
3 transfusions?

4 A. Yes, sir.

5 Q. Would you agree that, Doctor, in all  
6 fairness, that Mr. Brooks should have received blood  
7 transfusions sooner than he did?

8 A. I think if you're looking back in the records  
9 and I look at -- when I looked at this chart I looked at  
10 it in two ways, and that's the way I reviewed the  
11 records. What would I be doing as I was going through it  
12 and it is a step-wise fact until you say, okay, we got to  
13 give this man blood, and they have reached that  
14 conclusion around four o'clock, give or take, or three  
15 o'clock; I don't remember the time.

16 MR. KELLEY: Three o'clock.

17 BY MR. MISHKIND:

18 Q. Three o'clock. He was typed 4:49. An hour  
19 and fifty minutes later they gave him the first blood.

20 Would you agree this man needed to be  
21 transfused sooner than 4:49 a.m. in all fairness?

22 A. And was the blood available at the time?

23 Q. Assume the blood was available and he's typed  
24 at three o'clock and/or 2:58, whatever the type is, would  
25 you agree that in all fairness this man should have had

1 that blood transfusion sooner?

2 A. Probably. Would it have made a lot of  
3 difference in the long run; I don't know.

4 Q. But you can't say it wouldn't have made a  
5 difference, correct? You can't rule out, and listen to  
6 the questions first so in fairness you hear my question.

7 Number one, we can agree that Mr. Brooks  
8 should have received blood transfusions sooner than they  
9 were given in this case, true?

10 MR. KELLEY: Are we talking cross matched  
11 blood like in an emergency situation or just uncrossed  
12 matched blood?

13 BY MR. MISHKIND:

14 Q. Let's deal with that. When he was given the  
15 blood at 4:49 it was not cross matched was it?

16 A. No.

17 Q. And, in fact, at three a.m. there is no  
18 indication that they attempted to do any cross matching.  
19 They just typed him, correct?

20 A. Correct.

21 Q. They could have typed and cross, uncrossed at  
22 three o'clock, true?

23 A. But that's -- the answer to your question is  
24 yes, but that's one of the things they were not so sure  
25 that this man -- I'm looking at his record. It was

1 typed at three o'clock. The should be aware that  
2 something is going on maybe, but they hadn't come to the  
3 conclusion that he was bleeding to the point that he  
4 needed to be transfused.

5 Q. At three a.m. they know his blood type is  
6 what?

7 A. I don't remember, sir. I have to go back.

8 Q. And if they can't cross match someone you can  
9 give blood on an emergency basis, correct?

10 A. You're saying give him uncrossed matched  
11 blood?

12 Q. On an emergency basis you can give someone a  
13 certain type of blood which is not matched or not cross  
14 matched, correct?

15 A. You basically, the way I was taught, and the  
16 way I practice, is that I give uncrossed matched blood in  
17 a life or death situation. That's the only time.

18 Q. And you realize that there is certain blood  
19 types that you can give to a patient that substantially  
20 reduces the likelihood of any type of a hemolytic  
21 catastrophe occurring, correct?

22 A. I think, and I know, but I'm not a  
23 hematologist, and I don't remember, to be honest with  
24 you, the types and crosses, but the way I do it, the way  
25 I practice and the way I think is the correct way, you do

1 not give uncrossed matched blood unless it's life or  
2 death because I've seen people die from the wrong blood  
3 transfusions.

4 Q. If the people that were caring for him at  
5 three o'clock knew or should have known that he had a  
6 major intra-abdominal bleed, and they knew his blood type  
7 but they didn't, for whatever reason, cross match him at  
8 that time, if the standard of care hypothetically  
9 required the patient be given blood to treat a major  
10 intra-abdominal bleed you give uncrossed blood under  
11 those circumstances, true?

12 A. Two questions about your question. You said  
13 they knew he was bleeding intra-abdominal.

14 Q. Knew or should have known I said.

15 A. How could they know. You can't predict the  
16 future. So you can suspect, but you can't predict the  
17 future.

18 Q. Why would you have suspected at three a.m.  
19 given all the information available, doctor?

20 A. You know, I would not have thought of  
21 bleeding from the peg, that would be the last thing on my  
22 mind.

23 Q. What would you have thought of?

24 A. Some medical conditions -- it's so uncommon  
25 to bleed from a peg. They place thousands and thousands

1 of pegs. I don't know the statistics. I know it's very  
2 very uncommon.

3 Q. What about when a patient has been pulling on  
4 the peg and taken off all of the dressing from it about  
5 an hour and half, and all of a sudden the patient goes  
6 into severe shock, doesn't that cause or shouldn't that  
7 cause people that are caring for the patient to think  
8 that if the patient is pulling on it and taken all the  
9 dressing off, and then within a two-hour time period or  
10 hour and 45 minutes, the patient goes into significant  
11 shock, that the peg tube is the cause of the bleed?

12 A. Do you know who gets most of these pegs by  
13 far and away?

14 Q. Why don't you tell me?

15 A. Again, this is just from my own experience.  
16 I can't quote you literature.

17 People who have altered mental status or some  
18 type of coma, or people who can't swallow, who are  
19 confused, very debilitated, and these people were  
20 continuously pulling on the pegs, continuously pulling on  
21 the pegs, and yet not many of those bleed.

22 So just because he's pulling on a peg doesn't  
23 mean -- what you might have happen -- you pull the peg  
24 out, and those are some of the cases that I've been  
25 involved with in my taking these patients to surgery, but

1 bleeding is such a non-entity when it comes to a peg  
2 that it would not be my first idea, and the abdomen  
3 distention you keep referring to, any metabolic  
4 procedures can give you an ileus of the intestines where  
5 the intestines blow up and you get the abdominal  
6 distention.

7 Q. What else caused the patient at 2:25 a.m. to  
8 have a blood pressure of 90 over 80 where at midnight the  
9 blood pressure is 136 over 77, his respiratory rate has  
10 gone from 20 to 50, he is not tachycardiac with a  
11 pulse going from 111 up to 120. What else -- and with  
12 abdominal distention and with a hemoglobin drip from 13.9  
13 in the afternoon to 8.6 to 9.

14 You as a surgeon are given that information,  
15 and also told that a patient two hours earlier had  
16 manipulated or attempted to manipulate the pegs and taken  
17 off all the dressing and was complaining of pain, what  
18 are you going to say, Doctor, under those circumstances?

19 MR. KELLEY: Object. He specifically denied  
20 pain two hours earlier.

21 MR. MISHKIND: I'm talking about at 2:25.  
22 BY MR. MISHKIND:

23 Q. In other words, all that information at 2:25  
24 is provided, and are you going to tell me that you don't  
25 feel that this patient needed to have a surgical consult

1 at that point?

2 A. I'm going to tell you, as a surgeon, that  
3 that patient needed to be worked up before you consider  
4 surgery.

5 Q. And that work up would be what?

6 A. What they did here.

7 Q. Tell me what would be the standard of care in  
8 terms of work up of a patient.

9 A. I think you have to rule out some metabolic  
10 problems, cardiac problems, pulmonary problems. You have  
11 to just go down the list, and then once you get to it's  
12 this, it's not this, it's not this, then basically you're  
13 faced with the surgical problem, but if you take this  
14 patient to surgery without making that exact diagnosis,  
15 then you would be asking me why did they take that  
16 patient to surgery because the patient probably would  
17 have died.

18 Q. When do you think it would be reasonable to  
19 take the patient to surgery?

20 A. When he was stabilized. You try and  
21 stabilize these people. Not everybody that bleeds goes  
22 to surgery.

23 Q. When would you have started transfusing this  
24 patient?

25 A. MR. KELLEY. So we're clear, with our without

1 cross matching?

2 BY MR. MISHKIND:

3 Q. Correct. When would you have given  
4 transfusions?

5 A. I think the way I looked at his condition --  
6 can I look at this again?

7 MR. KELLEY: Sure.

8 THE WITNESS: I think with the hemoglobin of  
9 eight and a half or nine, whatever it was at three  
10 o'clock I would not transfuse this patient basically  
11 until I knew that this man was bleeding.

12 So somewhere between here and the time he  
13 arrested, when he made that diagnosis, is where I would  
14 start transfusing the patient.

15 The problem, if you wait and cross match him  
16 when he arrested, then it's going to take you two more  
17 hours. So I agree they give him uncrossed blood when  
18 they did.

19 BY MR. MISHKIND:

20 Q. Sometime between three and four a.m.?

21 A. Sometime between the time that the hemoglobin  
22 of nine, and from what I recollect the blood pressure  
23 remained fairly stable. I mean can we look at it?

24 MR. KELLEY: And the code is 4:10.

25 THE WITNESS: So he basically, when they get

1 there and start resuscitating him, which is around 2:30  
2 give or take, but at three o'clock they get his  
3 hemoglobin back to 8.9.

4 MR. KELLEY: One at 8.9 and one at 9.1.

5 THE WITNESS: That was what time more or  
6 less; I don't remember3

7 BY MR. MISHKIND:

8 Q. Just assuming at three a.m., for purposes of  
9 answering my question because I think that's what we were  
10 talking about in terms of three a.m. and 4:10 a.m. you  
11 want to know, as you're looking at these vitals signs,  
12 knowing that he's not been transfused at this point, are  
13 you suggesting to me that his blood pressure and his  
14 heart rate were such that this patient did not, in your  
15 opinion, need to be transfused?

16 A. In retrospect, going back over the chart the  
17 answer is yes. Going forward, and not even going back  
18 over the chart, I'm assuming they're taking care of --  
19 this patient's blood pressure at 3:10 is 169 over  
20 something or hundred -- that's a good blood pressure.

21 Q. What was it at three a.m. doctor?

22 A. 75. Still acceptable blood pressure.

23 Q. What was it at 2:53?

24 A. 76, but what was it at 2:57?

25 Q. But you don't know at 2:57 what it's going to

be but you know at 2:50 it was 82 over 50. You knew three minutes later it's 76 over 50. You know that his pulse is 125, he is tachycardiac and hypotensive, and he's in shock, true?

A. But let me go back.

Q. Can you answer my question first?

MR. KELLEY: You asked four questions and you ended with a question, but the lecture before that, and how this starts, was him looking at blood pressure, to be fair.

BY MR. MISHKIND:

Q. I'm always being fair.

My question to you: Was he tachycardiac and hypotensive at 2:53?

A. I don't know how correct the blood pressure is in a patient that has an irregular heart rhythm. Not the blood pressure, the pulse, I apologize, if you have an irregular heart rhythm.

He had an irregular heart beat, didn't he? You can take your blood pressure if you have an atrial fib, and it may be 170, may be 170, but your heart is beating. Your actual pulse is a lot less than that.

I don't know how accurate these pulses are, and how to interpret these pulses in that setting, and I look at the blood pressure, and to answer the question, I

1 think this man was in a slow shock, slow shock all the  
2 way through, I really do, but I don't know if it was  
3 blood or because he had a heart attack or all of the  
4 other reasons we talked about.

5 Q. Would you agree that it would have been  
6 preferable to have given this patient transfusions sooner  
7 than what was done in this case?

8 MR. KELLEY: Object.

9 BY MR. MISHKIND:

10 Q. Would you agree with me, Doctor, that it  
11 would have been preferable during the time period between  
12 2:00 a.m. or 2:25 a.m. and prior to 4:49 when he was  
13 given transfusions, that it would have been preferable to  
14 have given this man transfusions sooner?

15 MR. KELLEY: Object to the form of the  
16 question. He already told you there were two ways to  
17 look at it. Retrospectively and prospective. You asked  
18 which one you were looking for, and you left it out of  
19 the question.

20 MR. MISHKIND: Your objection is noted.

21 MR. KELLEY: Just make sure, Doctor, if you  
22 understand you have a difference you should qualify it  
23 because his question does not.

24 THE WITNESS: Going back a little, looking at  
25 the chart, yes, we should have given him blood at 2:30

1 Actually, going on what happened during this case you  
2 can't just go and give blood to someone. You have to  
3 make sure he needs it.

4 BY MR. MISHKIND:

5 Q. I understand. Can we at least agree, even if  
6 you're looking at it or your testimony is you're looking  
7 back at it after the fact, you would agree with me that  
8 at 2:30 Mr. Brooks should have been transfused with  
9 unmatched blood, true?

10 MR. KELLEY: Objection.

11 THE WITNESS: If we look at the chart, I  
12 don't think he should have had the peg. None of this  
13 would have happened.

14 BY MR. MISHKIND:

15 Q. Forgetting the fact if he needed the peg or  
16 not, at 2:30, and going back, and knowing ultimately what  
17 happened to the patient, once he hit hypodynamic status,  
18 it was known to everybody to have changed, can we agree  
19 that at 2:30, even though you may be looking at it  
20 retrospectively at 2:30, it would be preferable to  
21 transfuse him?

22 MR. KELLEY: Objection.

23 THE WITNESS: And I wouldn't agree to that  
24 because sometimes you can hydrate these people and  
25 resuscitate him with other means without giving people

1 blood.

2 BY MR. MISHKIND.

3 Q. You start, before giving transfusions, you  
4 see what crystalloids will do, correct?

5 A. Correct.

6 Q. And if crystalloids don't, after a certain  
7 period of time, take the patient out of shock, then you  
8 have to consider transfusions, true?

9 A. I think when that does not happen, you need  
10 to make sure that the heart is okay and the lungs are  
11 okay, because usually in people who bleed actively giving  
12 them blood this takes -- brings them out of shock and he  
13 never came out of shock.

14 Q. And he needed ultimately to have a  
15 transfusion, true?

16 A. If he doesn't get transfused at four or  
17 whatever time it was he would have died.

18 Q. Okay.

19 Based upon your review of this case, at  
20 Cleveland Clinic they have got general surgery resident  
21 doctors available 24/7, correct?

22 A. I am not familiar. I imagine so, yes, sir.  
23 From this record, but I don't know how they work over  
24 there.

25 Q. Cleveland Clinic is a tertiary facility that

1 has general surgeons on call or on staff, maybe their own  
2 staff to handle all types of medical emergencies 24 hours  
3 a day, seven days a week, true?

4 A. Yes.

5 Q. If general surgery is contacted because the  
6 medical team, whether it's GI or medical services, is  
7 concerned that a patient has an intra-abdominal bleed,  
8 such a consultation should be reflected in the patient's  
9 records, true?

10 MR. KELLEY: Objection.

11 THE WITNESS: Yes.

12 BY MR. MISHKIND:

13 Q. Such a request for a consultation should be  
14 reflected in the report, true?

15 A. Should be, but sometimes during a code when  
16 you're resuscitating, things are not always placed on the  
17 record, sir.

18 Q. Part of the management of a patient that is  
19 in shock involves managing their airway, correct?

20 A. Correct, sir.

21 Q. Can we agree that Mr. Brooks was not  
22 intubated until after he went into respiratory arrest?

23 A. I have to look at the records but I imagine  
24 what you're telling me is true.

25 Q. Would you agree, based upon his vital signs

1 starting at 2:25 and going forward, that Mr. Brooks  
2 should have been intubated sooner than 4:15 a.m.?

3 A. No.

4 Q. Why not?

5 A. Why should he have been intubated because  
6 your blood pressure is low, and we're using the term  
7 shock in loose terms, but it's not like it was a cardiac  
8 arrest, a full cardiac arrest. It was a low blood  
9 pressure, and people can talk to you and bleed normally  
10 with low blood pressure and tell me about his respiratory  
11 care from twelve midnight forward.

12 Q. Was he tachypnea?

13 A. He was tachypnea yes, sir.

14 Q. What was causing him to have such a high  
15 respiratory rate?

16 A. Probably his low blood pressure but I don't  
17 know it's clear from the way the question is asked.

18 Q. It was pretty clear, Doctor, when the patient  
19 was pulling on his peg, and had taken off all the  
20 bandages what was his blood pressure at the time?

21 A. You mean around midnight?

22 Q. Well, according to your review of the nurse's  
23 testimony, did she observe him pulling on the peg and/or  
24 attempt to manipulate the peg tube and having taken off  
25 all the bandages?

1           A.    Can we look at the nurse's notes?

2           MR. KELLEY:   Sure.

3           THE WITNESS:   Says 24:55.

4 BY MR. MISHKIND:

5           Q.    Which she explained to be 12:55 a.m.?

6           MR. KELLEY:   She said that's when she wrote  
7 the note.

8 BY MR. MISHKIND:

9           Q.    That's when she wrote the note to the vital  
10 signs that were taken at twelve midnight at 24:00. Who  
11 took those according to your careful review in this case?

12          A.    I believe that was the Indian nurse, because  
13 she said she walked around while the other nurse was  
14 giving rounds.

15          Q.    But your careful review in this case would  
16 suggest that the 24:00 vital signs that are recorded  
17 there were recorded by the nurse, true?

18          A.    I can go back and check if it's not true.

19          Q.    Again, you're testifying under oath based on  
20 review of important information, that's why I'm asking.

21          MR. KELLEY:   It's not a memory game.

22 BY MR. MISHKIND:

23          Q.    Of course it isn't. You only received the  
24 deposition recently, and I'm asking whether the 24:00  
25 vital signs were done by the Indian nurse?

1           A.    Can we go back and look at her testimony?

2           Q.    You don't have a recollection as you sit here  
3 right now?

4           A.    I don't remember right now because I  
5 recollect her saying that she said hello to her patient  
6 around midnight or something like that, while the other  
7 nurse is going off duty and giving reports to the other  
8 nurses. I don't know if that nurse took it right before.  
9 I think she said she did it herself.

10          Q.    Fair enough. Can we agree that her testimony  
11 was that she took those vital signs or someone took those  
12 vital signs at twelve midnight, and it was after twelve  
13 midnight that she was in to see the patient and  
14 discovered the patient pulling on the peg tube and the  
15 bandages off?

16          A.    I'm going to read the 24:55 note.

17          Q.    You can read it silently. You don't need to  
18 read it into the record. The report is long enough.

19          A.    What was the question?

20               MR. MISHKIND: Read.

21               (The question referred to was read by the  
22 reporter.)

23               THE WITNESS: Yes.

24 BY MR. MISHKIND:

25          Q.    What were the patient's vital signs when the

1 nurse came in sometime after twelve midnight and  
2 discovered the patient having pulled or manipulated the  
3 peg tube and having taken off all bandages?

4 MR. KELLEY: He's asking what the vitals  
5 were.

6 BY MR. MISHKIND:

7 Q. Let me make it easier for you, Doctor,  
8 because I'm not trying to trick you but can we agree --

9 A. You're doing a good job.

10 Q. I'm not trying to trick you at all. That's  
11 not my job. My job is to obtain information as it  
12 relates to your opinions.

13 Let me put it to you this way. Can we agree  
14 that the nurse did not check the patient's vital signs at  
15 the point in time that she discovered that he had  
16 manipulated the peg tube and taken off all the dressing,  
17 true?

18 A. Why should she?

19 Q. I'm not asking why she should or shouldn't.  
20 Can we agree she did not reassess the patient's vital  
21 signs at that particular time?

22 A. It depends. She did not take his blood  
23 pressure but he did have an apical heart beat.

24 Q. At what time?

25 A. That was at the 24:55 note. And the beat

1 sounds diminished she evaluated the patient.

2 Q. What is an apical heart rate? Is that  
3 normal?

4 A. Basically, you listen by hand or stethoscope  
5 and listen to the heart.

6 Q. Is that a normal heart rate?

7 A. That's irregular. That's when the underlying  
8 problem happened before.

9 Q. What was causing the apical heart rate at  
10 that time?

11 A. No. Everybody has an apical heart rate.

12 Q. What was causing the irregular --

13 A. That's his underlying cardiac problem.

14 Q. You don't know what his blood pressure was at  
15 that time, do you?

16 A. I don't think she wrote it, no.

17 Q. And you don't know what his pulse was?

18 A. It was irregular.

19 Q. You don't know what the number was, correct?

20 A. Correct, but that's why I told you a little  
21 while ago that I don't trust that pulse because it's an  
22 irregular pulse.

23 Q. Do you have any explanation as to why the  
24 patient's vital signs in this case, Doctor -- I'll wait  
25 until -- you're reading. I don't know if you can read

1 and listen at the same time.

2 Do you know in this case that the patient's  
3 vital signs were not checked for a period from 4:10 in  
4 the afternoon until midnight?

5 MR. KELLEY: He's talking about June the 4th,  
6 the date the peg was placed, I assume.

7 BY MR. MISHKIND:

8 Q. Yes.

9 A. I have to go back and look at the orders and  
10 what their criteria may be. Vitals can shift one-eighth  
11 every hour.

12 Q. Doctor, can we agree that if the vital signs  
13 are to be taken every four hours, that the nurses did not  
14 comply with the orders?

15 A. If they're every four hours, and they did not  
16 take them, they did not comply with the orders.

17 Q. That's certainly not good nursing care if the  
18 doctor says take them every four hours and you have an  
19 eight hour gap between vital signs, true?

20 A. I couldn't say that they did not comply with  
21 the orders.

22 Q. But orders are there to be complied with by  
23 nurses, true?

24 A. Yes, sir.

25 Q. And orders are given by doctors for reasons,

1 true?

2 A. Sometimes, no.

3 Q. We want to believe that doctors give orders  
4 for reasons, true?

5 A. I think we are all on -- this is again my  
6 life, my -- the way I practice, you know. We always  
7 write vital sign requests, but why should I wake a  
8 patient in the middle of the night to take the blood  
9 pressure. We do sometimes things out of habit then  
10 necessary.

11 Q. Between 4:10 p.m. and midnight, how much  
12 waking up would they have had to have done to comply with  
13 the request?

14 A. I just gave you the example writing that --

15 Q. Let me ask you this, Doctor.

16 Can we agree that you know of no reason in  
17 this case that nurses could not have complied with the  
18 orders of recording the vital signs every four hours in  
19 this case, true?

20 A. Someone didn't record it once.

21 Q. Do you know of any reason why they could not  
22 record the vital signs in compliance with the orders  
23 between 4:10 on June 4 and midnight?

24 A. All I know is that the patient maybe didn't  
25 want them to take a blood pressure.

1 Q. Does it say in the records the patient  
2 refused to allow blood pressure to be taken, that's why  
3 we couldn't do it?

4 A. It doesn't say that, no, sir. You're asking  
5 me, and I'm trying to give you an answer.

6 Q. I'm asking you, Doctor, do you see anything,  
7 based on your being an expert in this case, and providing  
8 information to help you, do you see anything in that  
9 regard that would permit you to tell me why the nurses  
10 did not comply with the order of taking the vital signs  
11 every four hours during the time period I'm talking  
12 about, from 4:10 up to midnight going into June 5th?

13 A. I do not.

14 Q. And, in fact, do you know what the order was  
15 before it became Q4?

16 A. No. But I can check.

17 Q. As you sit here now, you don't recall?

18 A. No.

19 Q. Define for me shock. How is that?

20 A. That's a very difficult word to define  
21 because, you know, someone sees a killing going outside  
22 and oh, my God, I'm in shock look at what I saw, and  
23 obviously that's not the shock we're talking about here,  
24 but I think that when blood pressure is below normal --  
25 I think when blood pressure is below normal it starts to

1 affect the other organs, I think that's an early  
2 definition of shock and in easy terms to understand,

3 Q. Can we agree that by three a.m. doctors at  
4 the Cleveland Clinic that were responsible for caring for  
5 Mr. Brooks knew Mr. Brooks' blood count, true?

6 A, By three in the morning yes, sir,

7 Q. They knew his blood pressure?

8 A, Yes, sir,

9 Q. They knew his pulse, correct?

10 A, Correct,

11 Q. They had signs of the response that the  
12 saline provided, true?

13 A, Correct.

14 Q. And he was remaining hypotensive, true?

15 A, Not always.

16 Q. I'm talking about three a.m.

17 A, Three in the morning blood pressure is the  
18 first, That's borderline in my book, **It's 76**, I call  
19 hypotensive. 95 is probably okay.

20 Q. They had lavaged the peg tube at the time?

21 A, Correct,

22 Q. They lavaged the peg tube because they were  
23 concerned about the possibility of a bleed, correct?

24 A, Correct,

25 Q. And when they lavaged the peg tube, can we

1 agree, Doctor, in fairness that these doctors were doing  
2 the right thing because they felt that there might be a  
3 bleed causing the patient to be in shock?

4 A. Correct.

5 Q. When they lavaged the peg tube and did not  
6 drawback any blood, the only source, if in fact it was a  
7 bleed, would be intra-abdominal opposed to inside the  
8 stomach, true?

9 A. It would be something besides the bleed  
10 giving him low hemoglobin.

11 Q. If they felt that the patient had a bleed  
12 based upon everything I just said, and they elected to  
13 lavage the peg tube and the peg tube basically lavaged  
14 and no blood being drawn out from the stomach, can we  
15 agree the mostly likely explanation if it was a bleed  
16 would be intra-abdominal?

17 A. Yes, sir.

18 Q. Can we agree that if it was an  
19 intra-abdominal bleed, doing an EKG is not going to  
20 resolve the problem?

21 A. If it's an intra-abdominal bleed, doing an  
22 EKG would not solve the problem, correct.

23 Q. By their account, they knew his blood type,  
24 correct?

25 A. They typed him at that time.

1 Q. They had done the blood and knew his blood  
2 type, true?

3 A. Yes.

4 Q. I think 2:45 they did the blood type. The  
5 results were reported shortly thereafter.

6 MR. KELLEY: I thought it was 3:00 and 3:08.

7 MR. MISHKIND. I think it was initially  
8 drawn.

9 MR. KELLEY. 2:25.

10 MR. MISHKIND. 2:56.

11 BY MR. MISHKIND.

12 Q. We can take the same thing in that general  
13 range.

14 My question to you is: Since they're drawing  
15 blood, they initially have arterial blood gas. They then  
16 draw blood, they see the patient's vital signs, they  
17 start him on saline, they see what kind of response they  
18 have when they actually draw the blood and type him.

19 Was there anything preventing them from  
20 typing and cross matching at that time?

21 A. That's what I referred to a little while ago.  
22 I think if they would have thought he was having an  
23 intra-abdominal bleed they would have typed and crossed  
24 him at that time.

25 Q. Again, I'm not trying to repeat this. I want

1 to make sure I have a firm understanding of your opinions  
2 before we leave today, if they had a firm understanding,  
3 or should have had a firm understanding, and we will let  
4 someone else make the determination as to that.

5 I understand what you're saying to me, but  
6 if, in fact, they should have had a firm understanding at  
7 that time that there was an intra-abdominal bleed, and  
8 they type the patient at the time, they should cross  
9 match the patient at that time as well, true?

10 MR. KELLEY: Object.

11 THE WITNESS: If they think he's bleeding?

12 BY MR. MISHKIND:

13 Q. Yes.

14 A. And they think he's bleeding then I think  
15 they should have typed and crossed.

16 Q. If on that scenario, if they typed and  
17 cross matched him at 2:45 or 2:00 whatever, 2:47, would  
18 you agree that blood would have been ready certainly by  
19 the time that they finished that initial fluid bolus that  
20 the patient was receiving?

21 A. That I could not tell you. It depends on the  
22 availability of blood.

23 Q. How long does it take to type and cross match  
24 and have blood available at your hospital?

25 A. It depends on the availability of blood and

1 the type of blood the patient has.

2 Q. What was his blood type?

3 A. I don't remember.

4 Q. Check and tell me then.

5 A. A positive.

6 Q. Same question then if they type and cross  
7 match him --

8 A. Let me -- hold on. Let me double check.

9 Q. That's all right. Your apology is accepted.

10 A. A positive.

11 Q. Again, my question was: If the type and  
12 cross match had been done at 2:45ish time period, would  
13 you agree that blood would have been ready by the time  
14 that they finished the initial fluid bolus?

15 A. I can't. I don't know how the Cleveland  
16 Clinic Blood Bank works, and I don't know if they had the  
17 blood available or not.

18 Q. Has anything been provided to you, Doctor,  
19 that would permit you to say that blood would not be  
20 available in a rapid manner?

21 A. No.

22 Q. In fact, assuming the Cleveland Clinic is  
23 like most tertiary care facilities, how long should it  
24 take to have the blood available?

25 A. I am going to give you a generic answer.

1 Possibly an hour. Between an hour and an hour and a  
2 half.

3 Q. If it's needed on an emergency basis then you  
4 could provide a patient with unmatched blood,  
5 correct?

6 A. If it's for life or death, yes.

7 Q. Can we agree that a patient in shock should  
8 be put on a heart monitor?

9 A. Yes, sir.

10 Q. Do you see the indication?

11 A. He was on the floor. They were resuscitating  
12 him and they took him to ICU.

13 Q. He's on the floor at 2:25 when the first  
14 doctors arrive. He's not taken to or he doesn't have an  
15 arrest, we'll talk about in a moment, until 4:10.  
16 Between 2:25 and 4:10 he's in shock, correct?

17 A. I'm sorry. 2:25 and 4:10 he's in shock.

18 Q. Correct?

19 A. Basically, yes, sir.

20 Q. He was not on a monitor between 2:25 and  
21 4:10, was he?

22 A. Not that -- not that I could see in the  
23 medical records.

24 Q. You would agree, would you not, that a  
25 patient that is in shock should be on a monitor?

1           A.    He should be.

2           Q.    Do you have any explanation in this case why  
3 he wasn't on a monitor?

4           A.    The only thing I can think there was an  
5 ongoing resuscitation, and when there is an ongoing  
6 resuscitation, everybody is doing something -- everybody  
7 is doing something, and they were taking his blood  
8 pressure very quickly.

9           Q.    That's the only explanation that you can  
10 provide to me?

11          A.    At three in the morning, in the middle of the  
12 night, and I think things got done fairly quickly, to  
13 tell you the truth.

14          Q.    That was not my question.

15                Other than what you told me, do you know of  
16 any other reason this patient was not on a cardiac  
17 monitor once the doctors were called in, Dr. Goldman,  
18 Dr. Lazarus arrived between 2:25 time period and 4:10  
19 when he experiences an arrest. Why wasn't he on a  
20 cardiac monitor?

21          A.    I don't know why.

22          Q.    You would certainly agree with me that it  
23 would be preferable to have him on a cardiac monitor,  
24 true?

25          A.    It's preferable.

1           Q.    Do you know what type of blood is given if a  
2 patient can't be cross matched in a sufficient period of  
3 time?

4           A.    I'm trying to remember if it was positive but  
5 I don't remember.

6                   (Brief discussion.)

7 BY MR. MISHKIND:

8           Q.    If at three a.m., hypothetically, you were  
9 contacted and you were told by the medical team that  
10 there was a high likelihood that the patient had an  
11 intra-abdominal bleed, that the patient's peg tube had  
12 been lavaged, that the patient had been pulling on the  
13 peg tube previously, that he dropped his hemoglobin to  
14 the level that he had, that he was remaining hypotensive,  
15 tachycardiac, was not bleeding into the stomach, can we  
16 agree that this patient needed to be taken promptly to  
17 the operating room?

18                   MR. KELLEY:  Objection, asked and answered.  
19 You can answer.

20                   THE WITNESS:  No.

21 BY MR. MISHKIND:

22           Q.    I want you to tell me now, as succinctly as  
23 you can, on was basis you disagree with that statement.

24                   MR. KELLEY:  Objection, asked and answered.

25                   THE WITNESS:  Specifically, in this case, you

1 need to make sure that the patient needs an operation,  
2 number one.

3 That he won't stop bleeding, number two.  
4 That the actual bleeds are intra-abdominal and make that  
5 diagnosis.

6 BY MR. MISHKIND:

7 Q. When do you think this patient stopped  
8 bleeding?

9 A. Probably sometime around four or five, and  
10 that's a guess. I have no way of really, really knowing  
11 if he stopped. I think he stopped bleeding at four or  
12 five.

13 Q. How many units of blood was he given?

14 A. I know he was given four uncrossed match.  
15 Let's count them.

16 Q. When you do that, I want you to tell me every  
17 single basis upon which you made that statement, under  
18 oath, that you believe he stopped bleeding at four or  
19 five a.m.

20 I want to fully appreciate that and  
21 understand that.

22 A. Just so that -- because I don't want to make  
23 assumptions. So she would agree he got four uncrossed  
24 matched; you don't have a memory?

25 Q. I do, Doctor, but I'm not the one testifying.

1 You're the one that reviewed the report carefully and  
2 providing opinions.

3 A. To the best of my ability here, he received  
4 four uncrossed units. He got that between 4:00 and 5:30  
5 the morning, give or take. Between 4:50 and 5:30, he got  
6 four units of blood, and to the best that I can see  
7 afterward he received three more units at around 9:00  
8 o'clock in the morning, okay.

9 Now, during this whole time he's been getting  
10 a lot of saline, which will give you a delusional affect.  
11 He has blood gases here -- where are those, the CBCs?

12 Hemoglobin on 4:35 was 6.3. So he gets --  
13 right around that time he starts getting his four  
14 uncrossed units. He's getting blood throughout the whole  
15 thing, and then he gets a total of seven units. He gets  
16 four at that time, between 4 and 5:30, and he gets three  
17 more later by the time he goes to the he O.R. -- by the  
18 time we have a CBC. So --

19 Q. Doctor, let me caution you may be answering  
20 out loud. The court reporter, any time you open your  
21 mouth, unless we tell her otherwise, the court reporter  
22 has to take it down. If you're thinking silently -- off  
23 the record.

24 (Brief discussion.)  
25

1 BY MR. MISHKIND:

2 Q. Ready to answer the question?

3 A. Yes, sir.

4 Q. Fire away.

5 A. He got four units of blood approximately,  
6 starting around 4:50, and the hemoglobin at 4:20 was  
7 6.3. When he goes to surgery, after he got there, his  
8 hemoglobin is 12 and his hematocrit is 36.

9 They basically -- we don't -- the H&H in  
10 those 6 hours, if he was still bleeding, actively  
11 bleeding, you don't expect the hemoglobin to have gone  
12 from 6 to 12. So maybe I heard them say four and five or  
13 five and six or five and seven. Somewhere before surgery  
14 he stopped bleeding, but his hemoglobin would not have  
15 kept on going up the way it did.

16 Q. Tell me why he stopped bleeding.

17 A. People stop bleeding for whatever reasons.  
18 That's why many times I don't have to operate, they just  
19 stop spontaneously, whether because the blood pressure  
20 was low, whether because the artery goes into spasm, the  
21 blood vessels into spasm.

22 Q. If you were consulting in this case at 5:30  
23 or between 5:30 and 6 o'clock, what would you have done?

24 A. I would have been gotten a cat scan, sir.

25 Q. The cat scan was not obtained in this case,

1 was it?

2 A. No.

3 Q. In fact, Dr. Grunfist said the cat scan was  
4 not necessary, correct?

5 A. I would have gotten the cat scan to document  
6 exactly that he was bleeding because I would not want to  
7 take a patient to the O.R. in such a terrible condition.

8 Q. You would agree with me that you read  
9 Dr. Grunfist's testimony --

10 A. Yes, sir.

11 Q. -- when she was told that someone was  
12 recommending a cat scan and she said, "Not necessary,"  
13 correct?

14 A. Because the assumption was he was bleeding,  
15 which he was, and I'm trying to tell you that I'm not so  
16 sure I would have operated on this gentleman after five  
17 o'clock.

18 Q. So you would have gotten a cat scan, correct?

19 A. Yes.

20 Q. And what most likely would that cat scan have  
21 shown at that time?

22 A. It would confirm the diagnosis. It would  
23 have shown exactly there is blood everywhere or the  
24 spleen is ruptured or make a diagnosis that -- something  
25 I could hang my hat on more before I took him to surgery.

1 Q. Would you have wanted that cat scan stat?

2 A. Yes.

3 Q. And stat in a hospital like a Miami Heart or  
4 a Cleveland Clinic, a facility that has 24/7, how long  
5 would a stat cat scan take where you're considering the  
6 possibility of doing emergency surgery?

7 A. It would take anywhere -- some cat scan  
8 machines take up to half an hour to do a -- and you're  
9 talking an hour or hour and a half.

10 Q. Doctor, wouldn't you agree that most tertiary  
11 care facilities that have cat scans where a surgeon is  
12 considering doing emergency surgery, that a cat scan can  
13 be obtained in a 15 to 30 minute period under normal  
14 circumstances?

15 A. Normal means a patient is not on a  
16 respirator, not intubated, that you have to have four or  
17 five people with you. Normal being a patient that is  
18 fairly stable maybe, but the cat scan, the request, takes  
19 up to 30 or 40 minutes. So even under the best  
20 circumstances you're up to an hour.

21 Q. You could have gotten a cat scan and what  
22 likely would that cat scan have shown?

23 A. I just don't know in my heart that taking  
24 this man to surgery would have -- in fact, I know, it  
25 wouldn't do any good retrospective or prospective.

1 Q. Do you think taking him to surgery harmed  
2 him?

3 A. I think after five o'clock, the second  
4 arrest -- he was doomed at the four o'clock arrest in my  
5 mind.

6 Q. Might as well make funeral arrangements for  
7 him at four o'clock?

8 A. I treat conservatively. You check his  
9 hemoglobin, H&H, which at the time of surgery was 12 and  
10 36.

11 Q. At the time of surgery will 3,000 cc's of  
12 blood clot?

13 A. Yes.

14 Q. And in addition anesthesia shows 1,200 cc's  
15 of blood loss as well, correct?

16 A. But I think the 3,000 included the 1,200.

17 Q. That's the way you read it?

18 A. That's what I understood.

19 Q. How did you understand that?

20 A. Because when you suction the blood the  
21 anesthesiologist looks at the blood loss. It was is in  
22 the abdomen.

23 Q. Just before you respond, you're understanding  
24 that when anesthesia refers to 1,200 cc's of EBL,  
25 estimated blood loss, that would be incorporated into the

1 3,000 cc's blood clot that Dr. Grunfist referred to?

2 A. That's the way I interpret.

3 Q. What percent of the total circulated blood is  
4 3,000 cc's?

5 A. Probably, fifty percent.

6 Q. So you think the patient stopped bleeding  
7 sometime between five and seven a.m.?

8 A. Somewhere around there, yes, sir. I have no  
9 way of telling absolutely it was 12 o'clock or 7:30, but  
10 yes, around there.

11 Q. What would the outcome have you been in this  
12 case if Mr. Brooks had been taken to surgery before four  
13 a.m.?

14 A. Before he was resuscitated?

15 Q. Well, at four a.m. do you think Mr. Brooks  
16 experienced a cardiac arrest?

17 A. I think he had an arrest. I don't know  
18 whether it was cardiac or it was an arrest injury.

19 Q. If fact, you would agree with me that at 4:10  
20 a.m. the records would suggest that it was a respiratory  
21 arrest, true?

22 A. I don't know if it would make a difference  
23 whether it's cardiac or respiratory, sir.

24 Q. Bear with me. Whether it was a difference or  
25 not, would you agree that the report at 4:10 a.m. does

1 not indicate that he sustained a cardiac arrest, true3

2 A. Where is this?

3 MR. KELLEY: Right there.

4 THE WITNESS: Oh, because they said, "No  
5 cardiac arrest."

6 BY MR. MISHKIND:

7 Q. Correct.

8 A. That's what it says, correct.

9 Q. And it says, "Respiratory arrest," correct?

10 A. Yes, sir.

11 Q. There is no CPR initiated, correct?

12 A. To my recollection there was known.

13 Q. And he was intubated to manage his airway,  
14 correct?

15 A. Correct.

16 Q. Certainly it's preferable to manage the  
17 airway of a patient before they go into respiratory  
18 arrest if, in fact, you can appreciate their hydrodynamic  
19 status worsening, true?

20 A. Say that again.

21 Q. If a patient goes into respiratory arrest at  
22 a given point, but you know as you're progressing along  
23 that a patient is in shock and is getting worse from the  
24 standpoint of managing the patient, it's preferable to  
25 intubate the patient so as to avoid a respiratory arrest,

1 true?

2 A. I guess preferable but not -- I mean as long  
3 as they're breathing, they're breathing.

4 Q. Do you know why they intubated the patient at  
5 4:16 p.m.?

6 A. No.

7 Q. Let me make it easier.

8 Would you agree they intubated the patient to  
9 manage the patient's airway --

10 A. I think --

11 Q. -- at 4:16?

12 A. Correct.

13 Q. Why wasn't the patient's airway managed prior  
14 to 4:16 a.m.?

15 MR. KELLEY: Object to that negative  
16 inference. If you want to ask how was his airway being  
17 managed prior to that, it's obvious it's a nasal cannula.  
18 BY MR. MISHKIND:

19 Q. In your opinion, was his airway being managed  
20 adequately before 4:16 a.m.?

21 A. Yes, sir.

22 Q. You don't have to look further. I'll move  
23 on. That answer is fine for me.

24 What is abdominal compartment syndrome?

25 A. I don't know what that is.

1 Q. You don't3

2 A. No.

3 Q. Not familiar with it?

4 A. No.

5 Q. When you have an intra-abdominal bleed, would  
6 you agree that you have increased abdominal pressure?

7 A. Yes, sir.

8 Q. And would you agree that that can cause  
9 compression of the renal veins, the lungs and the  
10 inferior vena cava?

11 A. It depends on how much.

12 Going back to your other question if I may,  
13 depends on how much blood you get increased abdominal  
14 pressure.

15 If you have a little bleeding it requires a  
16 lot of blood, if the object is to increase the  
17 intra-abdominal pressure.

18 Q. Do you think this man, based on the drop of  
19 his hemoglobin to the afternoon, until the time that they  
20 matched it, had enough of an intra-abdominal bleed to  
21 cause increased abdominal pressure?

22 A. I'm sure he did yes, sir.

23 Q. And increased abdominal pressure, with the  
24 kind of drop and the blood he had, can cause compression  
25 of the renal veins, the lungs and inferior vena cava,

1 true?

2 A. I never heard of that, sir. I can tell you  
3 the increased abdominal girth will compress the lungs  
4 because of the pushing up of the diaphragm.

5 Q. How long do you believe that Mr. Brooks had  
6 been bleeding before his hemoglobin was checked at 2:45  
7 a.m.?

8 A. I think when he started complaining of  
9 abdominal pain, and he had the drop in pressure, I think  
10 right around that time he started to bleed.

11 Q. What do you believe caused him to start  
12 bleeding?

13 A. I'd like to think and say, like everybody  
14 else, that tugging on the peg, but I have no way of  
15 proving that.

16 Q. Do you have an opinion, to a reasonable  
17 degree of probability, as to the most likely explanation  
18 in this case for why Mr. Brooks started bleeding?

19 A. The most likely cause I think is the patient  
20 tugging on the peg too.

21 Q. Why was Mr. Brooks' dressing changed on the  
22 peg tube at 9:45 p.m. on June 4th?

23 A. It says, "Dressing changed to peg two."

24 Q. Do you know why that was done?

25 A. It does not say.

1 Q. Would you agree that during the first 24  
2 hours after peg two is placed, that the normal procedure  
3 is to leave the dressing alone, not to change the  
4 dressing, not to wash the area, true?

5 A. Sometimes, yes. Sometimes, no.

6 Q. In fact, the orders in this case where for  
7 the first 24 hours, you agree with that?

8 A. Yes, sir.

9 Q. And do you have any explanation in this case,  
10 based on your review, as to why at 9:45 the dressing had  
11 to be changed at 4:10 in the afternoon? They were dry on  
12 intake?

13 A. Doesn't say. I could give you a, you know,  
14 ten reasons why it could have been done but it doesn't  
15 say why.

16 Q. Would you agree that one of those  
17 explanations or possible explanations at 9:45 that  
18 something was going on below the dressing, in the sight  
19 or the location where the peg tube had been inserted?

20 A. Something going on. What does that mean?

21 Q. Some issue, perhaps a bleed that had started,  
22 perhaps some irritation to a vessel that was causing  
23 either some seepage or irritation?

24 A. Any of those things could account for it.

25 Q. We don't know what his blood pressure was or

1 his vital signs were at the time?

2 A. No.

3 Q. All we know the nurse changed the dressing,  
4 didn't make any other assessment of the patient at that  
5 particular time other than a dressing change?

6 A. But you know there was no -- why do you  
7 think -- well, you're asking the questions.

8 It's not uncommon for someone to change a  
9 dressing, you know, because of a little oozing, because  
10 of skin oozing from a blood vessel, or a little serous  
11 seepage or a leaking around the gastroscopy tube, those  
12 reasons, and if even if there was a little bleed from the  
13 skin, and that's why she changed it, it does not mean  
14 anything about intra-abdominal bleeding because nowhere  
15 else during this consult did anybody mention blood coming  
16 out of the peg tube, and we see that the patient was  
17 bleeding so much or so active that he should have bled  
18 out according to what you asked me.

19 Q. Is there any indication that the patient's  
20 continuing to have transfusions of blood, that there is  
21 any blood described by anyone out on to the abdomen or  
22 out on to the dressing?

23 A. Not that I can recollect.

24 Q. Doctor, if a patient has increased abdominal  
25 pressure, would you agree that that can stop the bleeding

1 as well?

2 A. Yes, sir.

3 Q. So in this case, assuming the patient  
4 developed increased abdomen pressure, that could have  
5 actually compressed the area that was bleeding and caused  
6 it to clot off, true?

7 A. It usually happens much more in  
8 retroperitoneal structures. Structures lying free within  
9 the abdominal cavity usually don't respond that way.

10 Q. Let me see if I can shortcut some of this. I  
11 may not.

12 Can we agree that the multi-symptom organ  
13 failure that Mr. Brooks sustained was directly and  
14 proximately related to the hypovolemic shock?

15 A. Yes, sir.

16 Q. When Mr. Brooks came into the hospital --

17 A. I'm sorry. Can I ask something.

18 MR. KELLEY: If you want to clarify an answer  
19 go ahead.

20 THE WITNESS: In Mr. Brooks' case, the answer  
21 is yes, but in someone with better protoplasm, I think  
22 once you correct -- once you correct a hypovolemia, they  
23 should respond and not develop multi-system failure.

24 BY MR. MISHKIND:

25 Q. I asked you before about his airway, and I

1 think it was Mr. Kelley that testified that the NG tube  
2 was being used and he was being provided --

3 A. A nasal cannula.

4 Q. Right. Was his airway stabilized prior to  
5 4:10 or 4:15 a.m.?

6 A. I have a blood gas here from 6-5-98 at 2:45,  
7 and his PO2 is 84, and his PCO2 is 31, which are fairly  
8 okay, fairly mobilized.

9 Q. When is the next blood gases?

10 A. That's what I was looking for right here.  
11 4:20 is the next one I see here, sir.

12 Q. And that's five minutes after his airway had  
13 been -- after he had been intubated?

14 A. Correct.

15 Q. And what was his PO2 at that time?

16 A. 507.

17 Q. PCO2?

18 A. 36.

19 Q. Was his airway stabilized, in your opinion,  
20 adequately, prior to 4:10 a.m.?

21 A. Yes. Until he arrested, yes, sir.

22 Q. You said a moment ago that based upon the CPR  
23 data sheet that we were talking about, that you would  
24 agree with me that the report would not suggest that he  
25 had a cardiac arrest but rather a respiratory arrest,

1 true?

2 MR. KELLEY. Objection, he said that's what  
3 it says.

4 MR. MISHKIND. Right. Based upon the records.

5 MR. KELLEY: I don't think that --

6 THE WITNESS. I also said it didn't make a  
7 difference.

8 BY MR. MISHKIND.

9 Q. Tell me why it doesn't make a difference in  
10 your opinion in this case?

11 A. Because an arrest -- an arrest, if you stop  
12 breathing they go together, airway breathing,  
13 circulation. So you can't just have breathing and not  
14 have airway and circulation, you can't -- all  
15 intermingle, interchange. In my mind they all go  
16 together.

17 Q. If this patient had been resuscitated with  
18 transfusions prior to 4:10 a.m., can we agree that more  
19 likely than not he would not have arrested?

20 MR. KELLEY: Object to form.

21 THE WITNESS: I can't agree with that because  
22 this is going back retrospective or prospective or just  
23 in general.

24 BY MR. MISHKIND:

25 Q. We know what happened. 4:10 I'm going to

1 suggest to you that my argument is a number of things  
2 should have been done before we got to 4:10 p.m.  
3 including giving transfusions.

4 I'm asking you if the patient had blood  
5 transfusions before 4:10 when some event occurred that  
6 caused his condition to deteriorate, would you agree with  
7 me that he probably would not have arrested at that time?

8 MR. KELLEY: Objection to form.

9 THE WITNESS: Let me answer this because in  
10 the way I'm thinking, if I'm hypovolemic or a person is  
11 hypovolemic, and they go into shock and you resuscitate  
12 them, usually they don't go into multi-system failure.  
13 They may not even arrest.

14 He didn't respond in the normal fashion. He  
15 arrested even after getting fluid. So I don't know if  
16 giving blood would have been a difference or not.

17 BY MR. MISHKIND:

18 Q. Would you agree that a patient that is  
19 hypovolemic, that is not responding to fluid, that a  
20 reasonable and prudent physician would suspect that it's  
21 an intra-abdominal bleed and normally giving blood  
22 transfusions is the next form of treatment of that shock?

23 MR. KELLEY: Objection to form.

24 THE WITNESS: Once everything is out and  
25 feeling comfortable that he's bleeding in, he doesn't

1 respond to fluid, you should transfuse the patient.

2 BY MR. MISHKIND:

3 Q. Would you agree that if blood transfusions  
4 were desired, and blood transfusions were, in fact, given  
5 because the patient was believed to have an  
6 intra-abdominal hemorrhage, the blood transfusions,  
7 hypothetically, were given before 4:10 a.m., would you  
8 agree that this patient at the very least would have had  
9 a better chance of avoiding the arrest?

10 MR. KELLEY: Objection, you can answer

11 THE WITNESS: I don't know. I'm going to say  
12 what I'm thinking then I'll answer the way -- the way I  
13 think you want me to answer.

14 I don't know at what point this became  
15 irreversible. I think if he get blood at 2:24 maybe  
16 that's not irreversible. So I don't know at what point  
17 it becomes irreversible, and theoretically, if he's  
18 bleeding, and he got blood, he should do better than he  
19 was from retrospect not prospect.

20 BY MR. MISHKIND:

21 Q. Your testimony a moment ago, if at 2:25 he  
22 got blood he probably would have done better?

23 A. Right. This is hypothetical. You can't just  
24 give blood at 2:25.

25 2:25 I don't think he needed blood. I'm

1 telling you if he got blood somewhere before it became  
2 irreversible, it would be better, and I don't know the  
3 time it became irreversible.

4 Q. Did it become irreversible at 4:10 a.m. when  
5 he experienced a cardiac or respiratory arrest?

6 A. I think it became irreversible before that.

7 Q. Before 4:10 a.m.?

8 A. Yes.

9 Q. Some time before 4:10 a.m. but some time  
10 after 2:25 a.m. he became irreversible?

11 A. I think so.

12 Q. Your opinion is that the arrest did not  
13 change the likely outcome?

14 A. That's exactly -- I think that's correct.

15 Q. Whether it was a cardiac arrest or pulmonary  
16 arrest, correct?

17 A. Yes.

18 Q. And whether general surgery delayed  
19 unreasonably in providing a consult, and unreasonably in  
20 taking him to surgery, your opinion is that it would not  
21 make a difference in terms of his morbidity and  
22 mortality?

23 A. I'm not sure of saying they delayed  
24 unreasonable.

25 If it's a hypothetical question, in my mind,

1 and reviewing the records, I don't think it would make a  
2 difference.

3 Q. You think he would sustain the multi-organ  
4 failure and died anyway?

5 A. Yes.

6 Q. To a reasonable degree of probability, that's  
7 your opinion?

8 A. I think so.

9 Q. Do you have any literature that you can cite  
10 me to or any studies that you've done that would support  
11 such a theory?

12 A. No, I don't, and I'm not God, and I don't  
13 know if that's correct or not, but I do know that at 4:10  
14 it's a couple of culminating factors of low grade shock  
15 and probably somewhere before that it became  
16 irreversible.

17 Q. There in your report you reference I believe  
18 that there was a question of whether the patient was in  
19 DIC; do you remember that in your report?

20 A. Correct.

21 Q. You're not suggesting that you are of the  
22 opinion that a patient was in DIC, are you?

23 A. No. I got that from the report where they  
24 were going through the potential etiology sheet and one  
25 was DIC.

1           Q.    There is an admission note, he was noted at  
2 PT, his PTT, and INR were elevated; do you see any lab  
3 reports to correlate with that?

4           A.    I was referring to, I think one of the  
5 medical doctors who when he was going through the  
6 possible diagnosis commented on DIC in one of them. I'll  
7 try and find it for you right now.

8           Q.    I'm not suggesting that you didn't read  
9 something correctly from a note. I'm asking you whether  
10 there is any labs that you have seen to correlate with  
11 the PT, PTT and INR being elevated?

12          A.    You mean as far as being in DIC?

13          Q.    Right.

14          A.    No, sir.

15          Q.    What I'm looking for, I guess, is if someone  
16 is saying that PT, PTT and INR are elevated, there are  
17 some labs that are drawn, correct?

18          A.    Correct.

19          Q.    I'd like you to point to me where in the  
20 laboratory work that doctor would have gotten an idea  
21 that the PT, PTT and INRs were elevated to make that type  
22 of statement?

23               MR. KELLEY: I think he has to find the note  
24 where the doctor says it first.

1 BY MR. MISHKIND:

2 Q. Let me try and make it easier for you, and  
3 you're searching in the report, and the report should  
4 refresh that. I believe what you're looking for, and  
5 without my pulling out my set of reports, is an IMC  
6 admission note, correct?

7 A. Yes.

8 Q. And there is a reference to PT, PTT and INR  
9 elevated.

10 I want to know if you have a lab report that  
11 is in the records that would correlate with such a  
12 statement?

13 A. Let look at the labs.

14 MR. KELLEY: Are you saying you don't have  
15 one, and you want to know where they got it from?

16 MR. MISHKIND: I have some records provided  
17 to me directly from the Cleveland Clinic, and a copy of  
18 the report you provided me in the box of reports.

19 MR. KELLEY: We're on a ghost hunt.

20 BY MR. MISHKIND:

21 Q. I'm just wondering how one could say that PT,  
22 PTT and INR are elevated without having some type of a  
23 lab. This is where I got it from. They were checking  
24 for a DIC -- DIC profile check, but would you agree with  
25 me that there is no lab to reflect an elevation in the

1 PT, PTT and INR to correlate with that3

2 A. PT 17.4, I'm reading from this, yes. PT  
3 17.4, and it has an up arrow, and then INR 1.55 is an up  
4 arrow, PTT 71.7 and has an up arrow.

5 Q. Do you have a lab report that reflects that,  
6 where you able to find out?

7 A. I didn't find one. I haven't found one.

8 Q. Let me ask you this. It does not say what  
9 his platelets were, does it?

10 A. I can check the labs but in this note, if  
11 you're asking particularly to this, no, sir.

12 Q. Yes.

13 A. I don't see the platelets here, no.

14 Q. Let me ask you this. Are you of the opinion  
15 that he was in DIC before he went to surgery?

16 A. No.

17 Q. He was in DIC after the surgery, correct?

18 A. Absolutely.

19 Q. And would you agree with me that cause of the  
20 DIC was most likely the prolonged period of shock that  
21 the patient sustained?

22 A. Yes, sir.

23 Q. And that led to the hypoxia and injury that  
24 then led to these cascading of events, true?

25 A. Correct, sir.

1 Q. And would you agree even if this is not a  
2 hypothetical fashion, if he had been taken to surgery  
3 sooner, and the shock had been discovered earlier, that  
4 more likely than not he would have avoided the DIC?

5 MR. KELLEY: Objection.

6 THE WITNESS: I don't know. I can't agree  
7 with that, and I'm not trying to be against you here.  
8 Once you get blood transfusions you are set up for DIC  
9 without even shock, just getting multiple blood  
10 transfusions.

11 BY MR. MISHKIND:

12 Q. Not all patients that have blood transfusions  
13 go into DIC?

14 A. And my answer is not all patients who are in  
15 shock go into DIC.

16 Q. Right. But the DIC that he sustained was  
17 most likely due to the prolonged period of shock, true?

18 MR. KELLEY: Objection to the word  
19 "prolonged".

20 BY MR. MISHKIND:

21 Q. At most can you agree with me, Doctor, you  
22 disagree with me?

23 A. I agree his multi-system failure was a shock,  
24 and one of the things that failed was the clotting  
25 mechanism.

1 Q. When Mr. Brooks was admitted to the hospital,  
2 he had some acute renal failure, correct?

3 A. Let me go back and look for it.

4 He has a history of hypertension. He has a  
5 heart attack.

6 Q. I'm talking about the acute renal failure.  
7 You're thinking out loud.

8 A. No. I'm basically trying to document why he  
9 would get renal failure. He has hypertension, which  
10 could lead to renal failure, and a heart attack, which  
11 would get you some renal failure indirectly but it could.

12 Q. Let me ask, would you agree that the acute  
13 renal failure that he had on admission was mostly due to  
14 the rhabdomyolysis, polymyositis?

15 A. I think that contributed to it, sure.

16 Q. And BUN and creatine levels were improving  
17 prior to the code, weren't they?

18 A. I don't have the labs here.

19 Q. If I represent to you that they were  
20 improving prior to the code, and stayed close to that  
21 level after the code, you would agree with me that his  
22 renal problems were not likely related to the events that  
23 occurred at the time of the code, true?

24 A. Correct.

25 Q. If my statement is accurate, it's accurate.

1 If not --

2 MR. KELLEY: Go ahead and phrase it as a  
3 hypothetical, it's fine.

4 BY MR. MISHKIND:

5 Q. I understand what you told me, Doctor, so  
6 far, that general surgery consult in your opinion would  
7 not have made any difference in this case for the reasons  
8 that you stated earlier, general surgery consult,  
9 correct?

10 A. Correct.

11 Q. In your report you said that general surgical  
12 consult was obtained at 6 a.m. correct?

13 A. Correct.

14 Q. Can we agree that when the general surgical  
15 consult was obtained at 6 a.m. the general surgery team  
16 did not know whether or not a consultation by them at  
17 that particular time was going to be too late, correct?

18 A. Unless someone's been telling them over the  
19 phone what had been going on, and they have been keeping  
20 them aware of the patient's condition, then they have no  
21 way of knowing.

22 Q. And certainly there is nothing indicated in  
23 the medical records from any of the attendings on the  
24 floor or in the medical intensive care unit, that they  
25 felt that there was any indicating or a need for a

1 general surgery consult, correct?

2 A. On the medical records there is no mention of  
3 a general surgical consult until about 5:30.

4 Q. I think we can agree, can we not, that even  
5 though you feel that a general surgery consult at 6 a.m.  
6 or thereafter didn't impact the outcome, you would agree  
7 with me, would you not, that it would have been  
8 preferable to have had a general surgery consult earlier  
9 than 6 a.m.?

10 A. I don't think it would have made a  
11 difference.

12 Q. Remember I prefaced that by, you know, would  
13 it have been preferable even though it would not make a  
14 difference. Would it have complied with the standard of  
15 care to have had a general surgery consult earlier than 6  
16 a.m?

17 MR. KELLEY: Object to form.

18 THE WITNESS: It would have complied with the  
19 standard of care, yes.

20 BY MR. MISHKIND:

21 Q. In other words, even though it didn't make a  
22 difference in your opinion, it's based upon what was  
23 going on with this patient, you would agree with me that  
24 general surgery should have been consulted prior to 6  
25 a.m., true?

1 MR. KELLEY: Objection, you just changed the  
2 question from if you know.

3 I want to make sure the witness does because  
4 it's a subtle change you made. First you went with the  
5 inference would it be okay if they did it.

6 Now you took the step if they didn't do it,  
7 it was beneath the standard of care. I want to make sure  
8 the record is clear.

9 THE WITNESS: I picked it up.

10 BY MR. MISHKIND:

11 Q. Without his help.

12 A. I don't think it was below the standard of  
13 care not to have seen the patient until 6 o'clock.

14 Q. Tell me why.

15 A. Because it didn't make a difference.

16 Q. That's the reason?

17 A. It didn't make a difference because by the  
18 time they would have taken this patient to surgery, he  
19 had arrested, and then he had to be resuscitated, et  
20 cetera.

21 Q. That is with hindsight. That's knowing what  
22 ultimately happened.

23 I'm asking you was it below the standard of  
24 care not to have obtained a general surgery consult prior  
25 to 6:00, and not knowing what was ultimately going to

1 happen, but should a general surgery consult have been  
2 obtained earlier than 6 a.m. to comply with the standard  
3 of care?

4 A. Not to comply with the standard of care,  
5 just because they didn't see him before 6 a.m. that it  
6 was below the standard of care.

7 Q. Why?

8 A. Because nothing was done differently.

9 Q. That's the basis for your answer?

10 A. It makes sense.

11 Q. Whether it makes sense or not that's the  
12 basis for your answer; is that correct?

13 A. They did all the appropriate tests, and we  
14 have someone testimony that they did try to call general  
15 surgery, and they were in contact via the phone a couple  
16 of times, although they were not necessarily there they  
17 knew exactly what was going on.

18 In fact, they ordered an x-ray or something,  
19 KUB in that regard, and so they were there basically, if  
20 they're not there physically, they were there.

21 Q. They needed to be there whether it was  
22 physically or otherwise, correct?

23 You're giving the benefit of the doubt to the  
24 statements in the deposition which you indicated to me is  
25 not supported by anyone else's statement, true?

1 A. It's not in the medical records, yes.

2 Q. Yet, you know, Dr. Danasec indicated that  
3 there is no evidence that general surgery was consulted  
4 or contacted at any time prior to his initiated consult  
5 at 5:30, true?

6 A. I think I remember him saying that. I don't  
7 remember who but someone said that.

8 Q. You said in your report the patient had to be  
9 resuscitated, and this was an ongoing process, true?

10 A. Correct.

11 Q. And resuscitation should have included  
12 transfusions of blood, correct?

13 MR. KELLEY: Object.

14 THE WITNESS: It did include transfusions of  
15 blood.

16 BY MR. MISHKIND:

17 Q. You don't believe that the transfusions of  
18 blood that he had had to be given earlier than 4:40 or  
19 4:50 a.m.?

20 A. I think we're going back to retrospective  
21 things in hindsight.

22 MR. KELLEY: He wants prospective, should  
23 they have given blood. Did the standard of care require  
24 them to give blood.

25 THE WITNESS: I think prospective they did

1 not deviate from the standard of care.

2 BY MR. MISHKIND:

3 Q. I understand your position in this case, and  
4 I guess looking at it retrospectively, you would have  
5 preferred knowing what happened, you would have preferred  
6 to have blood upon board sooner, correct?

7 MR. KELLEY: Object to form. You can answer.

8 THE WITNESS: Yes.

9 BY MR. MISHKIND:

10 Q. And knowing what happened in this case, the  
11 patient would have had a better chance, albeit in your  
12 opinion, it probably would not make a difference, but a  
13 better chance of surviving, true?

14 MR. KELLEY: Objection to form.

15 THE WITNESS: Ask the question again.

16 BY MR. MISHKIND:

17 Q. Your opinion is that nothing done wouldn't  
18 have made any difference in this case, true?

19 A. Correct.

20 Q. But you also indicated it would have been  
21 preferable to have blood transfusions earlier than they  
22 were given, true?

23 MR. KELLEY: Objection, you left out of the  
24 fact retrospective. That this is a retrospective  
25 analysis.

1 THE WITNESS: In hindsight, yes, sir.

2 BY MR. MISHKIND:

3 Q. You would agree with the same scenario that  
4 had he been given transfusions earlier, he would have had  
5 a better chance at survival with earlier transfusions,  
6 true?

7 MR. KELLEY: Objection.

8 THE WITNESS: I don't know. That's what I'm  
9 hesitant to say. True, I don't think the man had many  
10 reserves, and I don't know whether -- I don't know if he  
11 overcame all his reserves or it would have helped him.  
12 So I would like to tell you yes, I think it would have,  
13 but I don't know if it would have in this gentleman.

14 BY MR. MISHKIND:

15 Q. You're not suggesting on the record that  
16 earlier transfusions would have harmed him, are you?

17 A. In this particular case?

18 Q. Yes.

19 A. No.

20 MR. MISHKIND: Now, just a couple more  
21 questions and we will be done.

22 MR. KELLEY: I don't believe you.

23 BY MR. MISHKIND:

24 Q. I would not go on record saying that unless I  
25 was truthfully getting close to the end.

1                   You say Mr. Brooks had very little  
2 reserve and was unable to withstand very little bleeding.

3                   Tell me what you mean by that statement.

4                   A.    If you look his hemoglobin was 13.3 in the  
5 afternoon. I think it was 13.3 not 13.9, and he dropped  
6 to a hemoglobin of 9, yet he goes into shock, you know,  
7 and most of us would have tachycardia, but maybe if we  
8 stood up our blood pressure would go to 50 or 60, but he  
9 was down. The blood pressure is maintained, but he  
10 maintained a blood pressure with a hemoglobin of 9.

11                   People are walking around with a hemoglobin  
12 of 9 on a daily basis, and people go to surgery and start  
13 off with a hemoglobin of 13, and then end up sometime, an  
14 hour later, a hemoglobin of 9 not in shock.

15                   Q.    What caused him to have this very little  
16 reserve?

17                   A.    Probably all his multiple medical problems  
18 put together.

19                   Q.    Any one of greater significance than any  
20 others?

21                   A.    I think they're all significant.

22                   Q.    The fact that he the drop from the 13 in the  
23 afternoon, to 8.6 or 9 in a matter of 10 hours or  
24 whatever, you believe that if he had more reserves that  
25 this patient should have done better?

1 A. I think so, yes.

2 Q. The fact that he continued to bleed after  
3 that 8.6 or 9 hemoglobin was drawn, in fact, dropped down  
4 to 6.4?

5 A. Three.

6 MR. KELLEY: 8.

7 THE WITNESS: In the 6's.

8 BY MR. MISHKIND:

9 Q. Before he started to get transfusions you  
10 still believe that this patient had very little reserves  
11 that caused him to react differently than someone else  
12 would to that kind of a bleed?

13 MR. KELLEY: Before -- so the record is  
14 clear before blood transfusions he was getting saline.

15 BY MR. MISHKIND:

16 Q. Yes. He got the crystalloid and saline, but  
17 his hemoglobin was not increasing, correct?

18 A. No, it wasn't.

19 Q. Is your hemoglobin going to increase when you  
20 have an intra-abdominal bleed solely by giving  
21 crystalloid?

22 A. No. It will go down. You'll dilute it that  
23 it appears that it's going down when it's not really  
24 going down.

25 Q. If it's down before you start giving the

1 crystalloid, and you dilute it further, and it's truly an  
2 intra-abdominal bleed, that's going to cause a more  
3 significant shock to the patient, is it not?

4 A. On the contrary. The crystalloid adds volume  
5 to the blood vessels whenever red cells are around  
6 circulation, and that's my whole point, even though the  
7 hemoglobin was 8.9 or 9, and he got continuous liters of  
8 fluid, and it did drop, that is the dilution affect from  
9 receiving so much saline.

10 So probably instead of hemoglobin 6 and a  
11 half, to use a number, in reality it was probably closer  
12 to seven and half or eight, and that's sustainable with  
13 life and not even to have shock.

14 Q. So in your opinion if it's sustainable with  
15 life, and not even to cause shock, you felt at that point  
16 he didn't even need transfusions?

17 A. No. I didn't say that.

18 Q. That's seems to be what you're implying.

19 THE WITNESS: No. Just because  
20 the hemoglobin of seven and a half or eight does not  
21 cause shock, doesn't mean that you're going to feel as  
22 good if your hemoglobin is 12 or 13.

23 BY MR. MISHKIND:

24 Q. Would you transfuse if the patient was yours?

25 MR. KELLEY: Object to the form, asked and

1 answered several times.

2 THE WITNESS: In retrospect?

3 BY MR. MISHKIND:

4 Q. Yes.

5 A. Somewhere between four and five.

6 Q. In retrospective, how many units of blood  
7 would you have given him?

8 A. I think they may have over transfused him.  
9 Probably four or five.

10 Q. At the time that he was taken to surgery, the  
11 reason that his hemoglobin and hematocrits were normal  
12 because he had received essentially what?

13 A. Seven units.

14 Q. Seven units is what your count is, and he  
15 also received at least eight liters of crystalloid,  
16 correct?

17 A. Yes.

18 Q. And that would explain -- plus why the  
19 bleeding stopped at some point, that would explain why he  
20 was normalized in his hematocrits and hemoglobin?

21 A. Let's say number X, when you give so many  
22 liters of fluid you dilute it so that the hemoglobin of  
23 14 at the time of surgery is diluted hemoglobin. So the  
24 real hemoglobin is probably 15 or 16 because he was over  
25 transfused.

1 Q. What happens when someone is over transfused?

2 A. Nothing. Probably people can go into  
3 congestive heart failure depending on the heart and makes  
4 the heart weaker. Other than that -- that I can think of  
5 right now.

6 Q. Doctor, I believe I'm done.

7 I'm looking at your report though, and I  
8 think we covered the opinions that you have in terms of  
9 looks like one of the opinions was patient had to be  
10 resuscitated, and this was on an ongoing basis, and they  
11 had to rule out other causes besides the blood; we talked  
12 about this, correct?

13 A. Correct.

14 Q. You expressed opinions that you hold with  
15 regard to that?

16 A. Yes.

17 Q. We talked about the issue of whether the  
18 patient was in DIC in terms of how that might impact the  
19 provision of blood and also talked about surgery,  
20 correct?

21 A. The only thing I would really like to see the  
22 labs, but basically if everything is the way we said it I  
23 agree with everything.

24 Q. You also told me as to why you don't think  
25 that earlier surgery would have made a difference?

1 A. Correct.

2 Q. And you also told me that you felt that he  
3 had very little reserves and was unable to withstand the  
4 bleeding based upon the hemoglobin levels at various  
5 stages, correct?

6 A. Yes, sir.

7 Q. You told me the basis for those opinions,  
8 correct?

9 A. Yes, sir.

10 Q. I believe that I covered all of the opinions  
11 that you have expressed in the report, correct?

12 A. I think so.

13 Q. Are there any other opinions that you're  
14 aware of that you're planning on testify to?

15 A. No.

16 Q. You never read Dr. Dinene's report in this  
17 case, the surgeon?

18 A. I don't think so.

19 MR. MISHKIND: I don't have any further  
20 questions for you. I will see you in a couple of weeks.

21 MR. KELLEY: He'll read.

22 (Thereupon, this deposition was concluded.)

23 (Thereupon, reading, signing and notice of  
24 filing was not waived.)

CERTIFICATE OF REPORTER

STATE OF FLORIDA :  
 : SS  
 COUNTY OF DADE :

I, CAROL LENETT, Shorthand Reporter and Notary Public, do hereby certify that I reported the deposition of MOISES JACOBS, M.D. a witness called by the Plaintiff in the above-styled cause; that the said witness was duly sworn by me; that reading and subscribing of the deposition were not waived by the witness and by counsel for the respective parties; and that the foregoing pages, numbered from 1 to 117, inclusive, constitute a true and correct transcription of my shorthand report of the deposition by said witness.

I further certify that I am not an attorney or counsel connected with the action, nor financially interested in the action.

Dated this 21<sup>st</sup> day of November  
 2000.
