

IN THE COURT OF COMMON PLEASCUYAHOGA COUNTY, OHIO

Doc. 217

CELIA GIGANTI,

Plaintiff,

-vs-

JUDGE FUERST  
CASE NO. 260391

NANCY HOWE,

Defendant.

- - - -

Videotape deposition of RICHARD S. KAUFMAN,  
M.D., taken as if upon direct examination before  
Colleen M. Malone, a Notary Public within and  
for the State of Ohio, at the offices of  
Beachwood Orthopedic Associates, 23250  
Mercantile Road, Beachwood, Ohio, at 1:30 p.m.  
on Friday, January 19, 1996, pursuant to notice  
and/or stipulations of counsel, on behalf of the  
Defendant in this cause.

1                   RICHARD S. KAUFMAN, M.D., of lawful age,  
2           called by the Defendant for the purpose of  
3           direct examination, as provided by the Rules of  
4           Civil Procedure, being by me first duly sworn,  
5           as hereinafter certified, deposed and said as  
6           follows:

7                   DIRECT EXAMINATION OF RICHARD S. KAUFMAN,  
8                   M.D.

9                   BY MR. ARMSTRONG:

10    Q.    Okay.  Would you state your full name for the  
11           record, sir.

12    A.    Richard S. Kaufman, M.D.

13    Q.    Okay.  And what is your profession?

14    A.    I'm a physician and orthopedic surgeon.

15    Q.    Would you explain to the jury, doctor, how, what  
16           your educational background was leading up to  
17           you becoming a physician?

18    A.    I received my BA degree Summa Cum Laude, that  
19           means with highest honors, from Yale University  
20           in 1952, and my M.D. degree from Columbia  
21           University in 1956.  I then had five years of  
22           postgraduate training, a year of internship at  
23           Mt. Sinai Hospital in Cleveland, a year of  
24           surgical residency at University Hospitals in  
25           Cleveland, two years of orthopedic surgery

1        residency at Mt. Sinai Hospital, and a year of  
2        orthopedic surgery residency at Indiana  
3        University Medical Center in Indianapolis.

4    Q.    Okay. And did you become licensed to practice  
5        medicine in the State of Ohio?

6    A.    I've been licensed to practice medicine in the  
7        State of Ohio since 1956, which is now 39 years,  
8        and I'm also licensed to practice in Indiana and  
9        California.

10   Q.    Okay. And do you have a specialty, doctor?

11   A.    I specialize in the field of orthopedic surgery.

12   Q.    And are you board certified in orthopedic  
13        surgery?

14   A.    Yes, by the American Board of Orthopedic  
15        Surgery.

16   Q.    What is a diplomat of the American Board of  
17        Orthopedic Surgery?

18   A.    That means that I've been certified by the  
19        American Board.

20   Q.    Okay. And would you just explain briefly to the  
21        jury what was required for your certification?

22   A.    I became board certified. I had to have, of  
23        course, four years of college and four years of  
24        medical school, five years of postgraduate  
25        training. Following this, I took a three day

1 series of written and oral examinations, which I  
2 passed the first time. I then had to be in  
3 practice for two-and-a-half years and take a  
4 second set of written and oral examinations,  
5 which I also passed the first time, and was  
6 certified by the American Board of Orthopedic  
7 Surgery as a fully trained and competent  
8 specialist.

9 Q. Okay. Do you have any hospital affiliations,  
10 doctor?

11 A. Yes. I'm on the active staff at Meridia South  
12 Pointe Hospital, which used to be called  
13 Suburban Hospital, where I've been the chief of  
14 orthopedic surgery for 29 years, Mt. Sinai  
15 Hospital, Hillcrest Hospital. I was the chief  
16 of orthopedics at Woman's General Hospital for  
17 23 years until it closed, and I'm the orthopedic  
18 consultant to the Arthritis Clinic at Cleveland  
19 Metropolitan General Hospital.

20 Q. Okay. Would you explain to the jury, doctor,  
21 what the field of orthopedics entails?

22 A. Orthopedic surgery is the branch of medicine  
23 that deals with the diagnosis and treatment,  
24 both medically and surgically, of diseases and  
25 injuries to what we might call the local motor

1       system, that is the parts of the body that move  
2       you about, primarily the bones and joints, but  
3       also the muscles and tendons and ligaments and  
4       nerves of the spine and the arms and legs.

5   Q.   Okay.  So that someone with a back problem,  
6       would they come to you typically?

7   A.   Yes.

8   Q.   All right.  And someone with a neck problem,  
9       would they also see you?

10  A.   Yes.

11  Q.   And someone with a, say, rotator cuff problem?

12  A.   Yes.

13  Q.   Okay.

14  A.   Rotator cuff is in the shoulder.

15  Q.   Okay.  In the shoulder, right.

16               And you would also perform surgery in  
17       various areas of the spine?

18  A.   Yes.  I don't operate on the neck, actually.  I  
19       take care of a lot of people with injured necks,  
20       but I don't actually operate.  I operate on, do  
21       a lot of lower back surgery, as well as shoulder  
22       surgery.

23  Q.   Okay.  Do you have any teaching positions,  
24       doctor?

25  A.   Yes, I'm a clinical instructor in orthopedic

1 surgery at Case Western Reserve University  
2 Medical School for the last 32 years, and I was  
3 a professor for 20 years at the Ohio College of  
4 Podiatry.

5 Q. That deals with the feet?

6 A. Yes.

7 Q. Okay. And have you been an orthopedic  
8 consultant to any Cleveland hospitals?

9 A. Yes, I'm the orthopedic consultant to the  
10 Arthritis Clinic at Cleveland Metropolitan  
11 General Hospital.

12 Q. Okay. Have you published any papers, doctor,  
13 dealing with orthopedics?

14 A. Yes, I published papers dealing primarily with  
15 fractures or broken bones, and I've given  
16 innumerable papers on various, at various, on  
17 various subjects. I was invited to present a  
18 paper at orthopedic grand rounds at Harvard  
19 University Medical School in Boston. I gave the  
20 Harold Cummins Lectureship at Tulane University  
21 in New Orleans. I was invited to participate in  
22 a symposium at the Mid-American Orthopedic  
23 meeting in Colorado Springs, and I gave the Dr.  
24 Russell Rizzo Memorial Lectureship here in  
25 Cleveland.

1 Q. Okay. And do you belong to any professional  
2 associations, if you could just highlight a few  
3 of them?

4 A. I'm a member of the Cleveland Orthopedic  
5 Society, the Ohio State Orthopedic Society, the  
6 Great Lakes Orthopedic Club, the Mid-America  
7 Orthopedic Society, the Clinical Orthopedic  
8 Society, the Bioelectric Repair and Growth  
9 Society. I'm a fellow of the American College  
10 of Surgeons. I'm a fellow of the American  
11 Academy of Orthopedic Surgeons, and a diplomat  
12 of the American Board of Orthopedic Surgery.

13 Q. Okay. I'm going to hand you what's been marked  
14 as Defendant's Exhibit H, and could you identify  
15 that, doctor?

16 - - - -

17 (Thereupon, Defendant's Exhibit H,  
18 a document entitled Curriculum Vitae - Richard  
19 S. Kaufman, M.D. was marked for purposes of  
20 identification.)

21 - - - -

22 A. This is what's called my curriculum vitae, which  
23 means my credentials, and this is up-to-date and  
24 accurate.

25 Q. Okay. Good. In addition to being an orthopedic

1 surgeon, do you from time to time see patients  
2 in your office?

3 A. Oh, we, orthopedic surgery entails the medical  
4 treatment of patients, as well as the surgical  
5 treatment, so we spend quite a bit of time  
6 seeing patients in the office, yes.

7 Q. Okay. And in addition to that, you from time to  
8 time act as a consultant for, for lawyers?

9 A. Yes, about five percent of the patients that I  
10 see are in consultation. That is, I always see  
11 them for examination and a report to somebody, a  
12 Plaintiff's attorney, a defense attorney, a  
13 third party, Industrial Commission of Ohio,  
14 second opinion, that sort of thing. Altogether,  
15 that represents about five percent of my  
16 practice. 95 percent of the people that I see  
17 are sick and injured patients that I treat.

18 Q. Okay. At my request, Dr. Kaufman, did you see a  
19 lady by the name of Celia Giganti?

20 A. Yes.

21 Q. Okay. And could you explain to the jury when  
22 you saw her?

23 A. I examined Mrs. Giganti July 21, 1994.

24 Q. Feel free to consult your notes, doctor, from  
25 time to time if you need to do so.

1           Okay. And when you saw her, did you take a  
2           history from her?

3   A.   Yes.

4   Q.   And what did that history reveal, doctor?

5   A.   Mrs. Giganti said she was injured April 8th,  
6           1993 when the car she was driving, going about  
7           10 miles an hour, was involved in a collision  
8           from the rear with another car. She said she  
9           was wearing a seatbelt. She said her left  
10          shoulder hit the door and her chest hit the  
11          steering wheel. She was not unconscious.

12               Following the accident she said she  
13          developed pain in her low back and her left leg,  
14          as well as in her throat, her left shoulder and  
15          her left arm. She also developed pain in her  
16          chest.

17               She saw Dr. Jack Berman the following day,  
18          Dr. Berman is an internist, and was examined and  
19          x-rays taken. She was treated with Darvocet,  
20          which is a pain pill; Percodan, which is a pain  
21          pill; a heating pad and an antiinflammatory  
22          medication she said with a little relief.

23               She was then referred to Dr. Devereaux, who  
24          is a neurologist, someone who specializes in  
25          treatment of problems with the nerves, because

1 of her low back pain, with the pain going down  
2 her left leg, and because of her hoarseness.

3 She had an MRI. MRI is, stands for  
4 magnetic resonance imaging. The patient is  
5 placed in a large magnetic field. The field is  
6 flipped 90 degrees, it's then flipped back  
7 again, the patient's atoms and molecules disturb  
8 the magnetic field and the disturbance is  
9 measured and feed into a computer and the whole  
10 thing comes up with a picture, not only of the  
11 bones, but of the nerves, the soft tissues and  
12 nerves and discs between the bones, the  
13 cartilage discs between the bones in the back,  
14 and these can all be seen on an MRI.

15 And she had an MRI of her lower back, as  
16 well as an EMG. That stands for  
17 electromyogram. Electro means electricity, myo  
18 is muscle, and gram is a picture. So it's a  
19 picture of the electrical activity of the  
20 muscles and of the nerves of her low back and  
21 left leg. And the report was said to show a  
22 herniated disc, that is a bulging disc of  
23 cartilage coming out and pressing on a nerve  
24 root.

25 She had pain pills and a different

1 antiinflammatory medication without relief.

2 She was then referred to Dr. Colombi. He  
3 performed surgery. Dr. Colombi is a  
4 neurosurgeon. She performed -- he performed  
5 surgery on her lower back, taking out the  
6 herniated disc in her lower back on June 15th,  
7 1993.

a Following this, she started physical  
9 therapy in September of 1993, which she received  
10 twice a week, and massotherapy, which is just  
11 massage, once a week, which she called, quote,  
12 limited relief, unquote.

13 She said she was still getting therapy the  
14 last time June 6th, which would be six weeks  
15 prior to when I saw her.

16 Q. If I could stop you there, doctor. You mention  
17 that she indicated that her car was traveling  
18 about 10 miles an hour when it was rear-ended by  
19 another car?

20 A. That's what she said.

21 Q. Okay. So her car was in motion?

22 A. It was in motion. And when a car is in motion,  
23 it tends to absorb some of the impact.

24 Q. Okay. Did she mention some complaints that she  
25 had regarding her injuries?

1 A. At the present time she said that the pain in  
2 her left arm or upper extremity had persisted  
3 unchanged. She said it involved the entire left  
4 upper extremity, all the way to the fingertips.  
5 She said it would come and go and was moderate  
6 to severe in degree. She said she was having no  
7 pain at the time of this examination, and  
8 she had last had pain, quote, probably last  
9 evening, unquote.

10 She said the pain was made worse by the end  
11 of the day and was relieved by rest. She said  
12 there was intermittent numbness and weakness of  
13 her entire left upper extremity, and the last  
14 time the night before this examination. She had  
15 not had any MRI of her neck, nor an EMG of her  
16 upper extremities. She hadn't had those tests  
17 for her upper -- her arms, she only had it for  
18 her legs.

19 Q. Okay.

20 A. She said that since her low back surgery, the  
21 low back pain had improved at times. She said  
22 it was located on the left side and it went all  
23 the way from the lower part of the mid back,  
24 where the ribs are attached, down to the  
25 buttocks. She said it was constant and moderate

1 in degree, at times severe. She said that it  
2 was moderate at the time of this examination.  
3 She said the pain was made worse by activities  
4 of daily living, that is just things, doing  
5 anything around the house, and it got worse as  
6 the day went on.

7 She said it was relieved by nothing that  
8 she knew of, although she said it was helped by  
9 exercise. She tried, she said that she tries to  
10 swim daily.

11 She said there was a constant spread of the  
12 pain to the left, the outer side of the left  
13 thigh and to the front of the leg and foot and  
14 toes. She said she had constant numbness in the  
15 same area, and she said she had weakness of the  
16 entire leg.

17 Q. Was there anything significant about, excuse me,  
18 was there anything significant about those  
19 complaints, doctor?

20 A. Well, the -- you don't get weakness of the  
21 entire leg. I mean, that requires several  
22 different nerves to be involved, and she said  
23 that she had weakness in the entire leg, which  
24 is sort of, we call it nonanatomical complaint,  
25 it doesn't, it doesn't fit the normal anatomy,

1           and that would be somewhat bizarre.

2   Q.   Okay.  And did any of her symptoms subside?

3   A.   She said the hoarseness and her chest pain had  
4       subsided.

5   Q.   Okay.  What did she tell you about her  
6       background, doctor?

7   A.   She said that she was a substitute administrator  
8       for schools.  She said she had not worked since  
9       the accident.  She said she'd had no previous or  
10      subsequent injuries or symptoms in her arm or  
11      neck or her low back in the past.  She said that  
12      she had been in good health, she'd had no  
13      serious illnesses or operations.  She had taken  
14      no medication which would affect her symptoms on  
15      any of this examination.

16  Q.   Okay.  And did you perform a physical  
17      examination on Mrs. Giganti, doctor?

18  A.   Yes.  On physical examination she appeared to be  
19      in no discomfort.  She said that she was in  
20      moderate low back pain at the time.  She  
21      certainly did not appear to be when you looked  
22      at her and watched her move about, get up, get  
23      down, walk around.  She was instructed to let me  
24      know if anything caused her pain during the  
25      examination.  Her gait, the way she walked, was

1 normal, and she moved about quite easily. She  
2 could walk on her heels and toes easily,  
3 indicating that she had good muscle strength in  
4 her legs.

5 Q. Okay.

6 A. Examination of her neck showed her to hold her  
7 head straight. The neck motion was normal in  
8 rang without pain. There was no restriction, it  
9 could go down and back and side to side and  
10 turning it from side to side without any pain.  
11 There was no spasm in the muscles. Spasm is the  
12 involuntary contracture of a muscle when there  
13 is underlying pain and the muscle will go into  
14 spasm to prevent motion, and the examiner can  
15 feel the spasm through the skin. There was no  
16 spasm. There was no tenderness in the muscles  
17 and ligaments about her neck.

18 The neurological examination of her arms  
19 was normal. The reflexes, just as when you tap  
20 the knee, the leg kicks, there are other tendons  
21 that you can tap and the muscles will twitch,  
22 there are three in the arms, and these are all  
23 normal. There was no numbness and there was no  
24 weakness in the arms. So the examination of the  
25 neck was totally normal.

1    **2.**    Okay.

2    A.    Examination of her left shoulder showed the  
3           contours of the shoulder to be normal.    It  
4           looked perfectly normal.    There was no  
5           swelling.    There was no fluid in the joint.  
6           There was no instability of the ligaments about  
7           the joint.    The shoulder was quite stable.  
8           There was no redness or heat or any evidence  
9           that the shoulder was inflamed.    There was no  
10          skin discoloration, such as black and blue or  
11          redness.

12                 Range of motion in the shoulder was  
13           normal.    She could bring it all the way up and  
14           bring it all the way back and turn it in and  
15           turn it out and bring it across.    All these  
16           motions were perfectly normal and they were all  
17           pain free.    There was no crepitus felt in the  
18           joint.    Crepitus is a sandpapery feeling that  
19           you feel when the joint surface is rough,  
20           particularly if they have arthritis, that sort  
21           of thing in the joint.    You can feel the sort of  
22           rough, one rough surface moving on another, you  
23           get this sandpapery effect, and she did not have  
24           that, that, it was not present.    There was no  
25           tenderness anywhere about the shoulders, so that

1 the examination of her left shoulder was totally  
2 normal.

3 2. Okay.

4 A. Examination of her lower back showed her to  
5 stand straight. There was a well healed  
6 surgical incision from her surgery. There was  
7 some restriction of motion in all directions,  
8 due to pain, going down and back and --

9 2. Is that due to complaints of pain or --

10 A. Yes, due to complaints of pain. She said it  
11 hurt. So and going down and back and side to  
12 side was restricted because she said it hurt.

13 There was no muscle spasm in the muscles of  
14 the lower back at that involuntary contracture,  
15 and I can't feel when there's underlying pain,  
16 but there was no spasm.

17 Moderate tenderness was said to be present  
18 over the left side of the lower back and also  
19 over the surgical incision area.

20 The Lasegue sign -- I'll say this first and  
21 explain what I'm saying. The Lasegue sign was  
22 negative on both sides when sitting, but was  
23 positive at 80 degrees on the right and 45  
24 degrees on the left when she was lying down.  
25 Now, the Lasegue sign is a test that we do. It

1 can be done two different ways The patient can  
 2 be lying flat and, with knees straight, the leg  
 3 is brought up in the air like a periscope This  
 4 puts a stretch on the sciatic nerve as it goes  
 5 down the back of the leg, and if that nerve is  
 6 irritated, it will produce pain in the back and  
 7 down the leg And you can also test it when  
 8 they're lying flat this way You can also test  
 9 it with a patient sitting on the edge of the  
 10 bed, like on the edge of the examining table and  
 11 then straighten the leg out Now the leg is in  
 12 exactly the same position as if she were lying  
 13 flat in bed, except she's sitting up And in  
 14 this case, she can put her leg out perfectly  
 15 easily when she was sitting up, strengthening up  
 16 perfect. But when she's lying flat, she, one she  
 17 says gives her pain at 80 degrees and this one  
 18 at only 45 degrees You just get it up this  
 19 high and she said it hurt This is an example  
 20 of exaggeration of symptoms, because, obviously,  
 21 the two tests should produce the same result

22 On addition, although the Patrick's sign,  
 23 the Patrick's sign is a test that we do with the  
 24 patient lying on her back and she put the heel  
 25 of one foot on the opposite knee and then this

1 leg, like you're going to tie your shoelaces,  
2 except you're lying flat. And then this leg is  
3 brought down in a sort of figure four position  
4 and this puts a stretch on the muscles and  
5 ligaments of the lower back and will produce  
6 pain if they are inflamed. It did not in her.  
7 But she said that just moving the hip up 45  
8 degrees when she was flat produced pain, 40  
9 degrees on the left and 80 degrees on the right,  
10 although she could sit on the edge of the bed  
11 with the hip flexed 90 degrees without any  
12 complaints. When she was lying flat, she said  
13 when her hip was bent up only 45 degrees, it  
14 gave her pain. This is another example of  
15 exaggeration of her symptoms.

16 Measurement of her legs showed the length  
17 to be equal. The circumference of the thighs  
18 were equal, which you would expect. The  
19 circumference of the left calf was one quarter  
20 inch smaller than the right. The examination of  
21 the nerves of her lower extremities of her legs  
22 revealed the knee jerks to be brisk and equal  
23 and the ankle jerks to be equal. There was said  
24 to be decreased sensation, that is some numbness  
25 in the outer side of the left leg and foot.

1 Q. Is this what she told you, doctor?

2 MR. WEISMAN: This, excuse me. I  
3 just wanted to object. Move to strike  
4 portions of the last answer.

5 Q. Okay.

6 A. She said that there was decrease  
7 sensation -- yes, this is what she told me.  
8 When I examined her for numbness, she said that  
9 she had decrease sensation in the outer portion  
10 of her leg and foot.

11 Q. Okay.

12 A. There was apparent weakness of the extensors of  
13 the left foot, but that is the toe extensors,  
14 the muscles that pull the toes upwards appeared  
15 to be weaker on the left than on the right.

16 Q. Okay. Thank you, doctor. Would there be any  
17 explanation anatomically of her complaints of  
18 pain in the two positions, one being flat and  
19 one sitting up on the examination table?

20 A. No, there's no anatomical explanation for that.  
21 Actually, the leg is in the same position at the  
22 two times, except the patient doesn't realize  
23 it, and that's what we call a, that is called  
24 evidence of exaggeration of symptoms when the  
25 test is not consistent between the positions.

1 Q. Okay. Did you have any x-rays taken, doctor?

2 A. Yes. X-rays were taken at this office of the  
3 lower back and pelvis, and she showed  
4 degenerative disc disease with some slipping of  
5 the one vertebra on the other at, between the  
6 third and fourth lumbar vertebra. And there are  
7 five lumbar spine -- lumbar bones, we'll call  
8 vertebrae, and you number them from the L1 down  
9 to L5, and then L5 -- after that it becomes the  
10 sacrum, which is part of the pelvis, and between  
11 L3 and L4 there was disc degeneration and some  
12 sliding back of L3 on L4. There was also a  
13 narrowing of the interspace between L4 and L5  
14 and a mild lumbar scoliosis, that is a curvature  
15 of the spine, which she's had since she was a  
16 young girl. This is something which occurs as a  
17 teenager and it doesn't change.

18 Q. Okay. And by disc degeneration, doctor, what do  
19 you mean by that?

20 A. Well, the, between each one of the bones in the  
21 back there's a disc of cartilage and this acts  
22 like a shock absorber and with time they begin  
23 to wear out and they lose their water content  
24 and they get smaller. Now, you can't actually  
25 see the discs on plain x-ray, but you can see

1       the space between the bone above and the bone  
2       below. And when this space gets smaller, then  
3       it's evidence that the disc has degenerated and  
4       gotten smaller. It's something that occurs in  
5       the lower portion of the neck and also occurs in  
6       the lower portion of the low back, with time,  
7       with wear and tear, and it's consistent with  
8       this patient's age.

9   Q.   Okay. And by low back, you mean the areas of  
10       like L4-L5?

11   A.   L4-5 and L5 and is first sacral vertebra. Those  
12       are the bottom two discs and those are the ones  
13       that tend to degenerate the fastest.

14   Q.   Okay. Would there, can you show the jury what  
15       you mean by the degenerative changes in Mrs.  
16       Giganti's spine by use of the x-rays?

17   A.   Yes.

18   Q.   Okay.

19                       VIDEO OPERATOR:   We're off the  
20       record.

21                       -   -   -   -

22                       (Thereupon, a discussion was had off  
23       the record.)

24                       -   -   -   -

25

1                   (Thereupon, Defendant's Exhibits I,  
2       J and K, x-rays were marked for purposes of  
3       identification.)

4                               -   -   -   -

5                   MR. ARMSTRONG:     I want to go back  
6                   on the record.

7   Q.   Doctor --

8                   VIDEO OPERATOR:    Hold on.   I'm  
9                   sorry.   We're on the record.

10   Q.   Doctor, I've marked for purposes of  
11       identification three x-rays marked Defendant's  
12       Exhibits I, J, and K.

13   A.   Yes.

14   Q.   And I just want to ask you, are those the x-rays  
15       of Mrs. Giganti that you took?

16   A.   Yes, on July 21, 1994.

17   Q.   Okay.

18   A.   This is, Exhibit I is an x-ray from the side of  
19       the lower back and these are the vertebrae, the  
20       bones that make up the back.   This space here is  
21       the disc spaces where the cartilage is.   You  
22       can't see it, but you can see the space between  
23       the bone above and the bone below.   This out  
24       here are just gas in the abdomen and this is her  
25       back, the back of her back there.   These are the

1 ribs coming down here. This is the 12th rib  
2 coming off here. So this is the first lumbar,  
3 second, third, fourth and, let's see, this would  
4 be one, two, three, four, five and -- no, this,  
5 this is one, two, three, four, five is  
6 down here. That's right. And what you see is  
7 this -- they should line up. You see the back  
8 of all the vertebrae should line up and the  
9 fronts line up. Here, this one, has slid back  
10 slightly on this bone here. It's backward.  
11 That's a degenerative change. That's an L3-4.  
12 And the disc space is narrowed here. You can  
13 see it's narrowed here, as well. Down here is  
14 the pelvis. That's what's obscuring the bones  
15 down here. That's on I.

16 J is a close-up view of just the lower  
17 back. Here's the pelvis. The hip joints are  
18 down here. Again, this is just gas in the  
19 abdomen. This is the L4 vertebra here. This is  
20 the disc space that's narrowed here. It's also  
21 a little here, but primarily it's the L3-4 and  
22 this is particularly narrowed at L4-5.

23 And this is the view, this is K. This is a  
24 view from the front. This is in her clothing  
25 and clips and things of metal in her clothing.

1 Again, the gas in her abdomen. Pelvis down  
2 here. Ribs up here. This is the last thoracic  
3 vertebra, the ones the rib attached to. **So** this  
4 would be L1, 2, 3, 4, 5, and you can see there's  
5 a very slight curvature to her back, which she  
6 has had since she was **a** young girl. And the  
7 degenerative change particularly to L4-5 down  
8 here.

9 Q. Okay. That's where she had her operation?

10 A. Yes, uh-huh.

11 Q. Okay. Doctor, did you have an opportunity to  
12 review some of Mrs. Giganti's records?

13 A. Yes.

14 Q. Both before her accident, as well as afterwards?

15 A. Yes.

16 Q. Okay. And did you find any indication in any of  
17 those records as to whether or not Mrs. Giganti  
18 had suffered any kind of neck problem prior to  
19 her accident of April 8th, 1993?

20 A. Oh, yes. In her industrial -- in her records  
21 from the Industrial Commission of Ohio she had  
22 had a previous neck injury in April of 1978, and  
23 there's been other ones, I think, since then as  
24 well. She also had fallen once -- I don't know  
25 if she was a gym instructor, gym teacher, and

1 she had fallen in at one time in gymnastics  
2 doing something and injured her lower back as  
3 well.

4 Q. Okay. And did you have any opportunity to look  
5 at the records of Dr. Fromson, Froimson?

6 A. Yes, Dr. Froimson.

7 Q. Okay. And particularly a record involved back  
8 in 1987?

9 A. Yes. At that time he saw her for a knee problem  
10 and noted that she had some weakness of bringing  
11 her foot up, of the muscles in her left foot,  
12 her extensors of her left foot.

13 Q. Okay. And from the records that you reviewed,  
14 what type of problem would she have there,  
15 doctor?

16 A. In her knee or -- well, she had some weakness,  
17 this weakness in her leg, and it was apparently  
18 in the muscles itself.

19 Q. Okay. There was an indication of a lack of a  
20 left foot reflex?

21 A. Yes. And she also had an absent ankle jerk,  
22 which goes along with an injured nerve going  
23 into her leg.

24 Q. Okay. And from the absent ankle jerk, what  
25 nerve would be involved?

1 A. Well, it could be either L5 or S1. Primarily  
2 S1.

3 Q. Okay.

4 A. But occasionally we see an L5 nerve root injury  
5 as well, but primarily it's S1. That is the  
6 first sacral nerve root.

7 Q. Okay. Did she bring that problem to your  
8 attention or the fact that she had suffered from  
9 prior neck or low back problems in the past to  
10 your attention, doctor?

11 A. No. I asked her specifically if she had any  
12 problems with these areas, and she said she had  
13 not.

14 Q. Okay. Doctor, based upon your knowledge,  
15 experience, and training, the history that Mrs.  
16 Giganti gave you, the review of her records and  
17 your examination of her, did you have an opinion  
18 within reasonable medical certainty as to  
19 whether Mrs. Giganti had suffered a neck and  
20 left shoulder injury in her accident of April  
21 8th, 1993?

22 A. Yes, it would be --

23 Q. And what was your opinion, doctor?

24 A. It would be my opinion, based upon reasonable  
25 medical certainty, that I found no evidence that

1 she injured her neck or left shoulder.

2 Q. Okay. Taking the same considerations into  
3 consideration, do you have an opinion within  
4 reasonable medical certainty as to whether she  
5 sustained an injury to her low back in the auto  
6 accident of April 8th, 1993?

7 A. Well, apparently she had a herniated disc in her  
8 lower back when Dr. Colombi operated on her  
9 after the accident. There's some indication she  
10 may have had it before the accident. She  
11 certainly had it after the accident. And there  
12 is evidence that she had some residual  
13 radiculopathy, which radiculo means nerve root  
14 and pathy means something wrong with it. So  
15 there is some evidence she had some residual  
16 radiculopathy, because she has this weakness in  
17 her toes and some atrophy of the calf. She said  
18 she has some numbness on the side of her leg.

19 Q. Okay. And did she have numbness in her toes  
20 prior to this accident on examination by Dr.  
21 Froimson?

22 A. I believe she did, yes.

23 Q. Okay. Based upon your knowledge, experience,  
24 and training, your examination of Mrs. Giganti  
25 and the history that you took, as well as your

1 review of her records, did you find any need for  
2 future medical treatment for Mrs. Giganti?

3 A. No.

4 Q. Or do you have an opinion as to whether she  
5 needed or needs future medical treatment,  
6 doctor?

7 A. Yes. It's my opinion that based upon reasonable  
8 medical certainty that she did not need any  
9 further medical treatment for anything that may  
10 have occurred in this accident.

11 Q. Okay. And taking into consideration your  
12 knowledge, experience, and training, your  
13 examination of Mrs. Giganti on, let's see here,  
14 July 21, 1994, the history that she gave you  
15 and your review of her records and your  
16 examination of her, do you have an opinion  
17 within reasonable medical certainty as to  
18 whether she could carry on her occupation as a  
19 substitute school administrator in the future,  
20 doctor?

21 A. Yes.

22 Q. And what is your opinion?

23 A. It is my opinion, based upon reasonable medical  
24 certainty, that she should be able to continue  
25 doing, working as a substitute school

1 administrator, a desk job type of job.

2 Q. Okay. Is there anything about being a school  
3 administrator which would in any way cause her  
4 problems with her back?

5 A. No.

6 Q. Her low back?

7 A. Not, no. I think that based on my examination  
8 of her, I found no reasons why she could not  
9 continue doing that.

10 Q. Okay. Again, the same considerations, doctor.  
11 Do you have an opinion within reasonable medical  
12 certainty as to whether Mrs. Giganti will need  
13 surgery of any kind in the future?

14 A. No, she will not.

15 Q. Okay.

16 MR. ARMSTRONG: Thank you. That's  
17 all the questions I have.

18 MR. WEISMAN: If we can go off the  
19 record for a minute.

20 VIDEO OPERATOR: We're off the  
21 record.

22 - - - -

23 (Thereupon, a discussion was had off  
24 the record.)

25 - - - -

1        CROSS EXAMINATION OF RICHARD S. KAUFMAN, M.D.

2        BY MR. WEISMAN:

3        Q.    Dr. Kaufman, when Mr. Armstrong was questioning  
4              you, he made mention of Dr. Froimson's  
5              findings. Based on your memory of reviewing Dr.  
6              Froimson's records regarding the left foot  
7              problem, wasn't that finding back in 1987?

8        A.    Yes.

9        Q.    Okay. And of what significance would that be to  
10             you medically, that it was six years before the  
11             collision, in terms of relating it to problems  
12             that were found after the collision?

13      A.    Well, it would indicate that she had some sort  
14             of radiculopathy or weakness in her foot even at  
15             that point.

16      Q.    Okay. But if assuming Mrs. Giganti didn't see  
17             anybody, treat with anybody between 1987 and  
18             1993, would you conclude that it certainly was  
19             not a major medical problem or disability for  
20             her?

21      A.    It certainly would, that would make it appear  
22             that way, yes.

23      Q.    Okay. Mr. Armstrong, at the end of his  
24             questioning, asked you about her employment.  
25             Just in general terms, isn't it true that

1        somebody with low back problems, not necessarily  
2        talking about Mrs. Giganti, but just in general  
3        terms, wouldn't prolonged sitting be a hardship  
4        for somebody or could be for somebody with  
5        severe low back problems?

6    A.    It could be a hardship for anybody.

7    Q.    Yes.

8    A.    Any of us who sit for long periods of time, get  
9        up and walk around and stretch a little bit.

10   Q.    Sure. But even especially for somebody who has  
11        low back problems?

12   A.    It can be.

13   Q.    Okay. Doctor, would you agree with me that most  
14        people over 40 years of age have some  
15        degenerative disc disease and arthritis of the  
16        spine?

17   A.    Yes.

18   Q.    Okay. And the fact that a person has  
19        degenerative disc disease that may or may not  
20        mean that they have pain associated with that  
21        disease; is that generally correct?

22   A.    Yes.

23   Q.    Okay. And the fact that you took an x-ray in  
24        July of 1994 of Mrs. Giganti showing an x-ray of  
25        the low back, which showed degenerative disc

1 disease, isn't it true that that does not  
2 necessarily mean that she had any low back pain  
3 before the collision in April of 1993?

4 A. That's also true.

5 Q. And, in fact, do you have any information or  
6 medical evidence that would indicate that she  
7 had any significant low back pain or disability  
8 before the collision of April 8th, 1993?

9 A. Just the one incident where she hurt her back.  
10 Other than that, no.

11 Q. And what, do you remember what year that was?

12 A. It was quite awhile ago. It may have even been  
13 '78 or something like that.

14 Q. Okay. Okay. Do you have any information or  
15 medical evidence that Mrs. Giganti was  
16 restricted from her normal daily functioning  
17 before the collision of April 8th of 1993?

18 A. No.

19 Q. Okay. Do you have any information that she was  
20 not physically able to do her work before April  
21 8th of 1993?

22 A. No. Well, I mean, she did retire as from being  
23 a gym teacher and --

24 Q. Right.

25 A. -- becoming an administrator, so I don't know if

1 she can continue being a gym teacher anymore,  
2 but as administrator she seemed, at least on a  
3 part-time basis, seemed to be able to do that.

4 Q. Okay. And there was certainly no evidence you  
5 know of medically that she was disabled in any  
6 way before the collision?

7 A. As a hospital administrator?

8 Q. Or a school administrator?

9 MR. ARMSTRONG: School.

10 A. School. It's not hospital, school  
11 administrator.

12 Q. Right.

13 A. School administrator, yes, that's correct.

14 Q. Okay. In general terms again, it's certainly  
15 possible to sustain severe low back injury in a  
16 rear end automobile collision?

17 A. In general terms?

18 Q. Yes.

19 A. Everybody that gets hit from the rear end  
20 doesn't sustain low back injuries.

21 Q. Right.

22 A. Most of them probably don't.

23 Q. Okay.

24 A. But it's possible.

25 Q. Okay. In fact, you've treated many people with

1 low back injuries, correct?

2 A. Oh, yes.

3 Q. And haven't you heard stories from people where  
4 they had minor types of situations where they  
5 bend over in a maybe awkward way and they say,  
6 gee, I heard something pop or some type of  
7 description like that and they come in with  
8 severe low back complaints?

9 A. You can get it from bending over, that's  
10 correct.

11 Q. Or sometimes bending over and lifting something  
12 without bending your knees?

13 A. Sure.

14 Q. Okay. Do you have any particular familiarity  
15 with the specifics of the collision as to how  
16 the automobile accident happened?

17 A. Just what I related already. I don't know  
18 anything else.

19 Q. Okay. And as far as the severity of the  
20 property damage to the vehicles, you're not  
21 familiar with that, correct?

22 A. No.

23 Q. Okay. Now, let me, if you would look at your  
24 report please of July 21st of 1994, and looking  
25 at the first page you'd indicated that Mrs.

1 Giganti mentioned to you that the car was going  
2 about 10 miles per hour, correct?

3 A. That's what she said.

4 Q. Now, isn't it true while you're asking a lot of  
5 questions and she's giving you a lot of answers  
6 there can be, at times, miscommunication and  
7 confusion, that's possible among people that are  
8 talking?

9 A. Well, I don't know. Just starting out --

10 Q. Yeah.

11 A. I, first of all, I don't interrupt her, I ask  
12 her --

13 Q. No, I --

14 A. -- a question.

15 Q. Sure.

16 A. And when she answers it, I write down whatever  
17 she said.

18 Q. Right and --

19 A. And if I'm not answering -- asking a lot of  
20 questions and answering a lot of questions, I  
21 think the questions are pretty straightforward.

22 Q. Right.

23 A. I asked her what happened and this is what she  
24 told me.

25 Q. Right. And when you've talked to people over

1 the many years you've been on this earth  
2 sometimes people can have miscommunication or  
3 misinterpretation when they are talking. I  
4 mean, just in general?

5 A. We try to be very careful to avoid that.

6 Q. Right. The only point I'm trying to make is  
7 it's possible that Mrs. Giganti said to you she  
8 was going about 10 miles per hour, but maybe she  
9 meant just prior to the collision, as opposed to  
10 the exact time of impact; is that possible?

11 MR. ARMSTRONG: Objection.

12 Q. Is that possible, that she misunderstood?

13 A. Well, she can say -- it's possible she can say  
14 anything she wants.

15 Q. Yeah. Right.

16 A. But that's what she told me.

17 Q. Okay.

18 A. That she was traveling 10 miles an hour.

19 Q. Yeah. And she was going 10 miles an hour, but  
20 whether it was at the exact time of impact?

21 A. Well, that's what I asked her, of course.

22 Q. Okay. And on your statement, though, in the  
23 report it doesn't say at the time of impact,  
24 does it?

25 A. She said her car was going about 10 miles an

1 hour when she was hit from the rear by another  
2 car. That's what she told me.

3 Q. Okay.

4 A. That's what I put down.

5 Q. Very good. **Now**, speaking of possible mistakes,  
6 about three sentences down she indicated to you  
7 she saw Dr. Jack Berman the following day.

8 A. That's what she told me.

9 Q. Okay. And again, you probably wrote down what  
10 she said, correct?

11 A. Oh, yes.

12 Q. Okay. And, in fact, if the records end up  
13 showing -- well, let me -- let's do this. Did  
14 you review Dr. Berman's records?

15 A. I don't remember seeing -- did she -- I reviewed  
16 some of --

17 Q. Yeah.

18 A. -- but I don't remember, I don't -- yes, I did  
19 review his records, but I don't remember what  
20 date though.

21 Q. Okay. And whether or not she actually saw Dr.  
22 Berman or his partner the following day?

23 A. No.

24 Q. Do you happen to recall that?

25 A. No, I don't know. I don't know whether -- he

1       has a partner, Dr. Rosenbaum. I don't know  
2       whether it was Berman or Rosenbaum that she saw.

3   Q.   And if Dr. Berman testified the other day that,  
4       in fact, she saw his partner the next day, you  
5       would have no basis to disagree with that, would  
6       you?

7   A.   No.

8   Q.   Okay. **So** again, she might have been mistaken in  
9       telling you it was Dr. Berman?

10  A.   Well, she went to his office apparently.

11  Q.   Right. Okay. Now, looking at page two, you  
12       mentioned that you asked her about prior  
13       illnesses and injuries, correct?

14  A.   Yes.

15  Q.   We're going down to about the I think third full  
16       paragraph. And she indicated to you that she  
17       had no previous or subsequent injuries or  
18       symptoms in the above areas; is that correct?

19  A.   That's correct.

20  Q.   Okay. And do you think that there was anything  
21       in her past medical history with respect to  
22       specifically her low back, that was of any  
23       particular significance that she should have  
24       recalled to tell you?

25  A.   Other than the one injury that she had, I don't

1 think there was, no.

2 Q. Okay. That was the one you estimated in '78?

3 A. I think -- it's been awhile. I don't know. I  
4 don't know exactly.

5 Q. Okay.

6 A. But it certainly was awhile ago.

7 Q. Okay. *So* in fairness to her, I mean, something  
a that happened 15 years earlier, it's possible  
9 somebody could overlook that?

10 A. Yes.

11 Q. Okay. Now, looking at the last page of your  
12 report, would it be your experience as a  
13 doctor -- and first of all, you've done spine  
14 surgery, correct?

15 A. Yes.

16 Q. Okay.

17 A. I certainly have.

18 Q. You're right.

19 A. On your brother.

20 MR. WEISMAN: Objection. Move to  
21 strike.

22 Q. And in doing surgery on people's spine, would  
23 you agree with me that, generally, somebody is  
24 not going to subject themselves to that serious  
25 of a surgery unless they have major symptoms?

1 MR. ARMSTRONG: Objection. Move  
2 to strike the hypothetical question.  
3 Q. Did you understand my question?  
4 A. In general that would be true.  
5 Q. Yeah. Okay.  
6 A. There are people who have, who want to have  
7 surgery, but generally that's true.  
8 Q. Yeah. In other words, for Mrs. Giganti to  
9 subject herself to surgery at Dr. Colombi's  
10 hands, would it be reasonable to presume from  
11 the complaints and the records you reviewed that  
12 she was having significant problems after the  
13 collision?  
14 A. Yes.  
15 Q. Okay. And do you agree with this general  
16 statement, in low back spine surgeries that  
17 about 10 percent of the time they're not going  
18 to be successful or would you use another  
19 statistic? What would be your approximation?  
20 A. Well, again, it depends what you mean by  
21 successful. I think that if you are -- it  
22 depends what you're trying to cure.  
23 Q. Okay. By successful, I guess I'm talking about  
24 relieving symptoms.  
25 A. Well, if on a herniated disc --

1 Q. Uh-huh.

2 A. When you take out the herniated disc, it  
3 relieves the symptoms in better than 90 percent  
4 of the time. Certainly because it's a purely  
5 mechanical thing. The disc material is pressing  
6 on a nerve root and you take the disc material  
7 out and it no longer presses on the never root  
8 and that's the end of the problem. So that  
9 certainly in, in most cases, at least 90 percent  
10 of the cases they will have very good results,  
11 yes.

12 Q. Okay. Is there anything in Mrs. Giganti's  
13 medical history that would account for her  
14 herniated disc, any incident or trauma that you  
15 can think of?

16 A. Not that I know of.

17 Q. Okay.

18 A. That would be before this accident.

19 Q. Before the collision?

20 A. Not that I'm aware of.

21 Q. Okay. Now, you had the opportunity to examine  
22 Mrs. Giganti in July 21st of 1994; is that  
23 correct?

24 A. Yes.

25 Q. Okay. And that would be about one year and

1 three months after her collision, correct?

2 A Yes.

3 Q Okay And that's about one-and-a-half years ago  
4 today; is that a fair estimate?

5 A Yes. Uh-huh.

6 Q Okay And that was your only opportunity to  
7 meet with her and examine her?

8 A. That's correct.

9 Q And you noted in your first sentence there that  
10 a representation of my office was present during  
11 the examination; is that right?

12 A Yes.

13 Q Okay And that person took some notes and kind  
14 of kept track as to how the examination went?

15 A I don't know what, if he was writing things  
16 down.

17 Q Yeah.

18 A But I don't know what he was doing, no. I  
19 don't pay any attention to her.

20 Q Okay If it's estimated by that person that that  
21 physical examination, meaning after the history  
22 was taken, when you put your hands on the  
23 patient, how the patient do the various  
24 movements, if it went from about 10:08 to 10:13  
25 a.m., approximately eight minutes, give or take.

1 does that seem approximately correct to you?

2 MR. ARMSTRONG: Objection. Move  
3 that the question be stricken.

4 A. What I do is I go in the office, I go in the  
5 room, I do a history and a physical  
6 examination. The examination actually begins  
7 when I'm taking the history and I'm observing  
8 the patient, of course, getting up and getting  
9 down and moving about, but I don't keep track of  
10 the time, and I go in, I do a complete and  
11 thorough job, and I leave, I don't keep track of  
12 the time.

13 Q. Okay. Based on your custom, though, and maybe  
14 your review of your report as to what was  
15 involved here, does eight or so minutes sound  
16 approximately right for the physical exam?

17 A. What I mean, what I've testified to this  
18 afternoon I'm sure of and I don't know how long  
19 it took.

20 Q. Okay. Okay.

21 A. We allow 45 minutes, but I don't have any idea  
22 how long it took.

23 Q. Okay. Now, let me get back to this idea of  
24 degenerative arthritis for a moment. Would you  
25 agree with me, Dr. Kaufman, that degenerative

2 arthritis -- first of all, it occurs in all of  
us as we age?

3 A. Now, of which joints?

4 Q. I guess we'll talk about the spine.

5 A. Well, with the degenerative -- yes, degenerative  
6 arthritis or osteoarthritis of the spine. Go  
7 ahead.

8 Q. Okay. As we all age and let's say we'll  
9 get -- let's talk about getting into our 50s,  
10 like Mrs. Giganti, most of us do have some  
11 degenerative changes?

12 A. Yes.

13 Q. Okay. And degenerative arthritis, again talking  
14 in general, will make a person more susceptible  
15 to injury, in other words, it's a weakening of  
16 the part of the body, so you might be more  
17 susceptible to injury?

18 A. No, degenerative arthritis is a wearing out of  
19 the joint and does not make it more susceptible,  
20 no.

21 Q. Okay. Just one moment. Okay. If I could, do  
22 you recall that I took your deposition in  
23 November in a case or I cross-examined you in a  
24 case named Patricia Morris versus Allstate?

25 A. No.

1 Q. Okay.

2 A. November of which year?

3 Q. Okay. Of '95.

4 A. No.

5 Q. Just a couple months ago. Let me bring your  
6 attention to a question that I asked you and I  
7 want to ask you if this was your answer.

8 A. Well, let me just see.

9 2. Sure. This would be at line 13.

10 A. Okay.

11 2. Line 13, the bottom left portion. If you would,  
12 could you read --

13 A. Okay.

14 1. Could you read the question and answer, and my  
15 question to you is whether -- do you remember  
16 that question being put to you and giving that  
17 answer?

18 A. Yes.

19 Q. Could you read the question and answer?

20 A. Yes. It says, the question was if somebody has  
21 arthritis of their spine, as a general  
22 statement, would you agree that it may make them  
23 more susceptible to injury? In other words,  
24 when they are involved in something like an  
25 automobile collision, if the spine is already

1 started to degenerate to some extent with  
2 arthritis, can that make the person more  
3 vulnerable to being hurt?

4 And my answer was yes. And the reason for  
5 that is it's not the arthritis that it's the  
6 general degeneration of the spine, but not the  
7 arthritis.

8 Q. Okay. And that -- I thought I just asked you  
9 that.

10 A. Oh, I'm sorry. No, but the arthritis per se is  
11 not, does not make them more.

12 Q. Okay.

13 A. More susceptible.

14 Q. Soft tissues of the body, is that what we refer  
15 to as the nonbony materials like ligaments and  
16 muscles and tendons?

17 A. That's correct.

18 Q. Okay. And soft tissues can be permanently  
19 injured by trauma, such as an automobile  
20 collision; is that a fairly general statement?

21 A. Yes.

22 Q. Okay.

23 A. Possible.

24 Q. Okay. You did review some records from Dr.  
25 Berman, the family doctor?

1        surgeon?

2    A.   Yes.   Uh-huh.

3    Q.   Do you know Dr. Jennifer Kregler who  
4        just --

5    A.   I know the name, I don't know her.

6    Q.   Okay.   Do you know anything about her  
7        reputation --

8    A.   No.

9    Q.   -- in particular?

10   A.   No.

11   Q.   Now, Dr. Kaufman, you have examined Mrs. Giganti  
12        on behalf of the defense in this case?

13   A.   No, at their request, not on their behalf.

14   Q.   At their request.

15   A.   Thank you.

16   Q.   ✓ And these types of examinations, where lawyers  
17        ask you to see a patient and write a report,  
18        you've been involved in that type of review for  
19        some 30 years?

20   A.   Well, I've been in practice for 35 years.   I  
21        think for most of that it's not uncommon as an  
22        orthopedic surgeon to be asked to give  
23        consultation --

24   Q.   Sure.

25   A.   -- about a patient and write a report to

1       somebody.

2   Q.   Okay.  And with respect to -- so we can get some  
3       idea as to the frequency of your review of  
4       patients for attorneys and, you know, the legal  
5       world, workers' comp or whatever is involved, do  
6       you do, you set up approximately six to eight  
7       examinations per week of that nature?

8   A.   I think about six is more, more the likely, four  
9       to six, something like that.

10  Q.   Okay.  Again referring you back to this  
11       particular deposition, I think I asked you at  
12       that time in terms of these examinations we're  
13       talking about, based on other cases we've had,  
14       would you say six to eight per week is a  
15       ballpark, fair estimate.  I was asking you about  
16       the exams.  You said, yes, I think about six  
17       probably, but like that?

18  A.   Yeah.  Yeah.

19  Q.   So somewhere in that?

20  A.   Yeah, about six is what I just finished saying.

21  Q.   Okay.  Okay.

22  A.   I'll stick by that answer.

23  Q.   Okay.

24  A.   It's -- I was just thinking this week it's now  
25       Friday and I think I've seen maybe four this

1 week, so.

2 Q. It could be less it could be more?

3 A. It's generally about six.

4 Q. Okay. And the charge for your exam and report  
5 is \$350?

6 A. That's right.

7 Q. And as far as giving a deposition like we're  
8 doing here today, about two per week is a fair  
9 estimate?

10 A. One or two.

11 Q. Okay. And again at that deposition, if you said  
12 two was a fair estimate --

13 A. That's what I said, one to two.

14 Q. Okay.

15 A. Uh-huh.

16 Q. And the charge for the deposition is \$850?

17 A. That's right, for a half a day, regardless of  
18 how long it takes.

19 Q. Okay. And this particular deposition you  
20 reviewed with Mr. Armstrong for a half an hour,  
21 right?

22 A. Ahead of time?

23 Q. Right.

24 A. Yes.

25 Q. Okay.

1 A. There's no charge for that.

2 Q. Okay. So our deposition would be an hour and a  
3 half to two hours, approximately?

4 A. Well, I block out the whole afternoon, so I  
5 can't do anything else anyway.

6 Q. Okay.

7 A. I don't know how long, I have no idea how long  
8 you're going to take so.

9 Q. Right. Now, when you issue a report, as you did  
10 for Mr. Armstrong, obviously when he has you  
11 testify, there can be things in there that are  
12 not good for the patient, that happens from time  
13 to time?

14 MR. ARMSTRONG: Objection.

15 A. I'm not sure what you mean by that.

16 Q. Okay. Well, for example, you said she was an  
17 exaggerator. That's not good for Mrs. Giganti's  
18 case, correct?

19 A. Well, I don't know, I'm not a lawyer, I'm just  
20 putting down what I find.

21 Q. Uh-huh. Well, you would agree with me that's  
22 not something that's helpful to her?

23 A. Well, I don't know. As I said, you're the  
24 attorney, I'm not. I'm just, I'm a medical  
25 doctor.

1 Q. Uh-huh.

2 A. I don't pass on what's helpful or not helpful  
3 for the, a person's legal case.

4 Q. Okay. And you concluded that you found no  
5 evidence of injury, I guess, to her neck or left  
6 shoulder?

7 A. That's correct, there was none.

8 Q. Okay. You did indicate there was some low back  
9 problems that you found?

10 A. I indicated that she was status. That means  
11 she, her present status was that she had had a  
12 previous surgery on her lower back for the  
13 lumbar disc.

14 Q. Uh-huh.

15 A. And that she had some residual radiculopathy. I  
16 said peripheral neuropathy. What I really meant  
17 was radiculopathy.

18 Q. Okay.

19 A. And there was obvious exaggeration of symptoms.

20 Q. Okay. Well, in any event, Mr. Armstrong has  
21 called upon you today to testify as a witness  
22 for the defense, correct?

23 A. Well, he's --

24 Q. He's calling you?

25 A. He's called me for his, yeah.

Q. Right.

A. For the defense to testify.

Q. Sure.

4 A. I don't testify for the defense.

5 Q. Right. And my question to you is this. With  
6 all of the examinations that you do, let's talk  
7 about for the defense. I know you do for both  
8 sides and so forth but for the defense, are there  
9 reports that you write from time to time that  
10 are totally-favorable to the patient?

11 A. Well, there are reports I've written from time  
12 to time in which I found things wrong with the  
13 patient that nobody knew was wrong with the  
14 patient, and there are times in the past where  
15 I've been asked by the plaintiff's attorney to  
16 testify and examine the patient at the request  
17 of the defense because I found things wrong  
18 with -- other doctors hadn't.

19 Q. Okay. Do you think that your secretary could  
20 locate a report that is helpful to the  
21 plaintiff, the person make making a claim, when  
22 you examined the plaintiff on behalf of the  
23 defense?

24 A. No, because it's not cataloged that way.

25 Q. Okay.

1 A. We have, we don't cross catalog them.

2 Q. No?

3 A. By -- we don't care who they're helpful for, I  
4 just write a report. So that it's not a matter  
5 of any kind of filing system which you could  
6 possibly locate that sort of thing.

7 Q. Okay. Was Mrs. Giganti essentially cooperative  
8 when she was in the office, in other words, did  
9 she do what you asked her to do?

10 A. Yes.

11 Q. Okay. Do you have any familiarity with her  
12 personally?

13 A. No.

14 Q. So as to her family history or reputation or  
15 anything like that, you would have no  
16 familiarity?

17 A. No.

18 C Just a few last questions and I'll wind up. Do  
19 you have any medical evidence or information  
20 from before the collision to indicate that she  
21 needed low back surgery?

22 A. No, except for the weakness that was found by  
23 Dr. Froimson.

Q. In 1987?

24 A. '87.  
25

1 Q. Okay.

2 A. That would be the only indication.

3 Q. Okay. He did not refer her for surgery as far  
4 as you know?

5 A. No.

6 Q. Okay.

7 MR. WEISMAN: Thanks. I have  
8 nothing further.

9 - - - -

10 FURTHER DIRECT EXAMINATION OF RICHARD S.

11 KAUFMAN, M.D.

12 BY MR. ARMSTRONG:

13 Q. Doctor, just a few questions.

14 A. Sure.

15 Q. Is it possible for someone to actually have a  
16 herniated disc at L4-5 without the intervention  
17 of an auto accident or a trauma?

18 A. Oh, yes. You can, a real major trauma you  
19 meant, a single incident you can  
20 get -- generally there's -- you can point to  
21 something that they've done, as was mentioned  
22 earlier, they can bend over, they can sneeze,  
23 they can try to lift something which they think  
24 is light and suddenly they find it's very heavy  
25 and they can herniate a disc. I've had patients

1       who had all of this incidences. There are lots  
2       of other causes, of course. Playing basketball  
3       is one. That sort of thing.

4   Q.   Okay. Well, the doctors that testified in this  
5       case have testified regarding the accident and  
6       the relationship of Mrs. Giganti's injuries.  
7       Based upon the history that she gave them of the  
8       accident and I think to some extent you're  
9       testifying in accordance with that history, too?

10  A.   That's correct.

11  Q.   That's something that the patient tells you and,  
12       actually, the doctor giving an opinion of that  
13       nature has no personal knowledge of those  
14       things?

15  A.   That's correct. And if she had trouble prior to  
16       the accident, I'd have no way of knowing it, of  
17       course.

18  Q.   Okay. Unless she told you?

19  A.   Unless she told me.

20  Q.   Okay. Also, Mr. Weisman has mentioned that you  
21       charge for your services, both for writing a  
22       report and for the testifying here today. Is  
23       that money that you actually receive yourself?

24  A.   Oh, no. Actually, it goes in the office. And  
25       of that money, 60 percent of it is overhead and

1 the 40 percent remaining, there are five of us  
2 in the office so it's divided five ways, so I  
3 end up with about eight percent of it and that's  
4 before taxes.

5 Q. Okay. And you have employees to pay?

6 A. Oh, yes. We have a very large office and a very  
7 large overhead.

8 Q. Approximately how many employees do you have  
9 here who are nonmedical doctors?

10 MR. WEISMAN: Objection.

11 A. Thirty five.

12 Q. Okay. Also in reviewing Mrs. Giganti's records,  
13 is there any indication as to why she retired in  
14 1990 as a school administrator?

15 A. She had other injuries, I think to her knees and  
16 that sort of thing, that caused her to -- not  
17 school administrator, she retired as a gym  
18 teacher and became a school administrator I  
19 think at that time.

20 MR. WEISMAN: Objection.

21 A. Is that right? I'm sorry.

22 Q. I think -- if you want to take a look at that.  
23 I think she was an administrator.

24 A. Oh, then.

25 Q. At the time that she retired?

1 A. Oh, yes. The claimant states that she took  
2 early retirement because of her injuries, and  
3 that was in 1992.

4 Q. Okay.

5 MR. ARMSTRONG: Thank you,  
6 doctor. I have no further questions.

7 MR. WEISMAN: Nothing further.

8 THE WITNESS: I'll waive viewing  
9 and I'll waive signing. Thank you.

10 MR. VIDEO OPERATOR: We're off the  
11 record.

12 (Signature waived.)

C E R T I F I C A T E

The State of Ohio, ) SS:  
County of Cuyahoga.)

I, Colleen M. Malone, a Notary Public within and for the State of Ohio, authorized to administer oaths and to take and certify depositions, do hereby certify that the above-named RICHARD S. KAUFMAN, M.D. Was by me, before the giving of his deposition, first duly sworn to testify the truth, the whole truth, and nothing but the truth; that the deposition as above-set forth was reduced to writing by me by means of stenotypy, and was later transcribed into typewriting under my direction; that this is a true record of the testimony given by the witness, and the reading and signing of the deposition was expressly waived by the witness and by stipulation of counsel; that said deposition was taken at the aforementioned time, date and place, pursuant to notice or stipulation of counsel; and that I am not a relative or employee or attorney of any of the parties, or a relative or employee of such attorney, or financially interested in this action.

IN WITNESS WHEREOF, I have hereunto set my hand and seal of office, at Cleveland, Ohio, this 22nd day of January A.D. 19 96.

Colleen M. Malone, Notary Public, State of Ohio  
1750 Midland Building, Cleveland, Ohio 44115  
My commission expires August 3, 1997
