1       APPEARANCES:         2       .         3       On behalf of the Plaintiffs:         4       Becker & Mishkind Co., LPA         5       by, JEANNE M. TOSTI, ESQ.         6       Skylight Office Tower         7       Suite 660         8       1660 West 2nd Street         9       Cleveland, Ohio 44113         10       216.241.2600         11       .         12       On behalf of the Defendant:         13       Roetzel & Andress Co, LPA         14       by, ANNA MOORE CARULAS, ESQ.         15       1375 East 9th Street         16       Suite 1000         17       Cleveland, Ohio 44114         18       216.615.7401         19       .         20       .         21       .         23       .         24       .         25       .	<ul> <li>A. Fair.</li> <li>Q. Now, I appreciate you giving</li> <li>me your most recent CV, and I'm not</li> <li>going to spend a lot of time going</li> <li>through your background because it's all</li> <li>set forth there.</li> <li>If you'd be kind enough</li> <li>Just to tell me, though, what does the</li> <li>average week for Dr. Savino entail?</li> <li>Give me a rundown of if there's</li> <li>something you do on Mondays, Tuesdays,</li> <li>in general, what your week entails.</li> <li>A. Yes. Because I'm at two</li> <li>different offices during the week, my</li> <li>week is split. Monday morning I see</li> <li>patients at my other office at Graduate</li> <li>Hospital, where I'm the chairman of</li> <li>see patients at Wills Eye Hospital and</li> <li>Tuesday afternoons I either see patients</li> <li>like I was doing now or do surgery</li> <li>here. Wednesday morning I see patients</li> <li>at Wills and run a lunchtime clinic for</li> <li>the residents and the neurologists at</li> </ul>
1       PETER J. SAVINO, M.D.,         2       having been duly sworn, was examined and         3       testified as follows:         4       BY-MS.CARULAS:         5       Q. Would you please state your         6       full name for the record.         7       A. Peter Joseph Savino.         8       Q. Dr. Savino, we've already         9       been introduced. My name is Anna         10       Carulas, and I represent the Cleveland         11       Clinic in this action.         12       You've had your deposition         13       taken before; correct?         14       A. Yes.         15       Q. So you understand you need         16       to answer everything verbally for our         17       court reporter. Okay?         18       A. Yes.         19       Q. If you don't understand one         20       of my questions, please tell me that and         21       ask me to rephrase it. Okay?         23       Q. If you answer something, I'll         24       assume you've understood it. Fair         25       enough?	pge 3Page 51Jefferson and whoever else wants to2come, and then Wednesday afternoon is an3administrative afternoon for me.4Thursday morning Isee patients at Wills5Eye Hospital and in the afternoon is an6administrative afternoon or I'll do7surgery rarely on those days. Friday8morning Isee patients at Graduate9Hospital. Friday afternoon I see10patients at Wills Eye Hospital.11Q. So as far as dividing up12your time between administrative13activities and clinical practice, what14would that split be?15A. Well, theoretically, it's two16half days a week administrative but,17unfortunately, the patient care spills18over into the administrative days and I19wind up doing a lot of the20A. Yes. Exactly.23Q. Now, I know that you have a24subspecialty of neura-ophthalmology,25Is your practice 100

1	Q. So I've looked through as	1	(Discussion off the record.)	
2	best as I could very briefly the	2	BY MS, CARULAS:	
3	materials you've reviewed. It looks	3	Q. So we have the stack of	
4	either you can go through and tell me	4	Cleveland Clinic records.	
5	for the record what you've reviewed or	5	A. They're not only Cleveland	
6	can help you as we go through here, but	6	Clinic records.	
7	it looks as if you have a stack	7	MS. TOSTI: There are	
8	A. I've reviewed everything at	8	some tabs here that may be helpful to	
9	one point or another. I've looked at	9	you.	
10	everything in that stack.	10	THE WITNESS: There are	
11	Q. So what we have here would	11	also a private ophthalmologist's	
12	be	12	records, there's some records from a	
13	MS. TOSTI: I think he	13	children's hospital, the Kid's	
14	would prefer if you leave them in the	14	Rainbow	
15	order he has them.	15	MS. TOSTI: Kids In The	
16	MS. CARULAS: This is in	16	Sun.	
17	order?	17	THE WITNESS: Exactly.	
18	MS. TOSTI: He had them	18	in there.	
19	in an order that he wanted to keep them	19	MS. CARULAS: Okay.	
20	in.	20	BY MS, CARULAS:	
21	MS. CARULAS: Oh, I'm	21	Q. Then it looked as if you	
22	sorry.	22	have the records of Dr. Jeffery, Amy	
23	THE WITNESS: You should	23	Jeffery.	
24	see my desk.	24		
25	MS. TOSTI: So go ahead	25	A. Yes.	

#### Page 15

#### 1 and look through them but please keep 1 Q. You've reviewed the 2 them in the order that he put them in 2 deposition of Dr. Luciano? 3 because they -- apparently, his thoughts 3 A. Yes. 4 are organized according to that 4 Q. And the deposition of Mrs. 5 sequence. 5 Kiss? 6 MS. CARULAS: Oh, okay. 6 A. Yes. 7 No comment on that. All right. 7 Q. And the deposition of Dr. 8 BY MS, CARULAS: 8 Kosmorsky. A. Yes. 9 Q. So it looks as if you were 9 10 provided with medical records from the 10 Q. Have you reviewed the Cleveland Clinic Foundation. 11 11 deposition of Dr. Cohen, Bruce Cohen? A. Yes. 12 12 A. If it's not here, ∎haven't Q. Do these include all 13 13 reviewed it. 14 inpatient and outpatient, to your 14 Q. Okay. 15 knowledge? 15 MS. TOSTI: I don't 16 A. I don't know if they're all. 16 know. Is it in the pile anywhere? 17 You can look through them and then you 17 MS. CARULAS: I don't see can change the order. It doesn't really it, but maybe you can find it. 18 18 matter. mean, we can deal with it BY MS. CARULAS: 19 19 later. But those are the records that 20 20 Q. We don't see it. So your 21 I have. 21 feeling would be you have not reviewed 22 Q. Okay. All right. So we 22 that deposition. 23 have a stack of --23 A. That's correct. 24 A. I don't know what that is. 24 Q. Now, Inotice on the front 25 (Interruption for a telephone call.) 25 of the deposition of Dr. Kosmorsky you

1	mean	1	A. Just what I just told you.
2	A. No. 11/21/97. Is that what	2	Q. Oh, "No good notes."
3	you said? I'm sorry. Yes.	3	Why did you cross that
4	Q. Note inadequate, what do you	4	off?
5	mean by that?	5	A. Because there Isaid
6	A. Well, ∎mean, I've looked	6	there were no good notes about why the
7	through all of this, if you want, and	7	surgery was done on that, and that's
8	to pick out little bits and phrases	8	true, but there was some documentation.
9	we're going to if you want to go	9	All right? But the documentation was on
10	through the chronology later, we'll do	10	the day of the surgery by the anesthesia
11	it twice. I'll do it however you like.	11	people who cleared him for anesthesia
12	The patient had some sort	12	and the pediatricians but there was no
13	of an injury where he bumped his head	13	note that I found from the neurosurgeon,
14	and had a swollen lid and because of	14	again, preoperatively. So that there
15	that went to this emergency room or to	15	were some notes but they weren't in the
16	this clinic, whatever it was, and they	16	neurosurgical section, and found them
17	did a CAT scan and they found that he	17	when I went back later and that's why
18	had sinus disease, it was an air-fluid	18	crossed it off.
19	level and this mass, which they never	19	Q. So you subsequently found Dr.
20	made a diagnosis of. I mean, I've	20	Luciano's records?
21	looked at the report and they've never	21	A. No. What I'm telling you is
22	said what it was.	22	that I found never found a preop
23	don't know how the	23	evaluation from Dr. Luciano saying, I
24	patient was then referred to the	24	examined the child, this is what he has

	Page 26		Page 28
<ul> <li>1 CAT scan or MRI shows, the one is</li> <li>2 causing the other, by doing the surgery</li> <li>3 I will make it better, these are the</li> <li>4 risks and benefits of surgery. Never</li> <li>5 saw that. And that's what I was</li> <li>looking for.</li> <li>7 Q. Then you go on to talk about</li> <li>a postop note. "Postop note says</li> <li>indication was third palsy but there was</li> <li>never a third palsy documented."</li> <li>A. Right. I mean, there was a</li> <li>note by I guess the neurosurgeon that</li> <li>said, you know, we did this operation,</li> <li>the reason we did it was third nerve</li> <li>palsy. But this patient never had a</li> <li>third nerve palsy.</li> <li>Q. And what is a third nerve</li> <li>palsy?</li> <li>A. It's a very specific</li> <li>neurologic set of signs and symptoms</li> <li>that relates to the eye where it's a</li> <li>combination of lid abnormality and eye</li> <li>movement abnormality. And it's very</li> <li>specific.</li> <li>Q. Then you go on, "1/16/98, S"</li> </ul>		<ul> <li>it? Yeah. Slightly improved, and that</li> <li>was in quotes so I guess it was the</li> <li>patient's words. But I don't understand</li> <li>that note. All right?</li> <li>Q. I can't read this. "Appears</li> <li>to be"</li> <li>A "two notes in one."</li> <li>Q. All right.</li> <li>A. And that was my confusion.</li> <li>If you'll read the note, you'll see what</li> <li>I'm talking about.</li> <li>Q. And then why did you cross</li> <li>off the complaints of headache, diplopia</li> <li>times two weeks?</li> <li>A. Because that was in the next</li> <li>note. All right?</li> <li>The next note was the</li> <li>started two weeks ago. All right? And</li> <li>that the he closes his left eye</li> <li>because he's having double vision.</li> <li>Q. And then down below, "2/9/98,</li> <li>ophthalmology diagnosis papilledema."</li> <li>A. Right. So then nothing</li> <li>happens. The patient is complaining of</li> </ul>	
<ul> <li>above and then "telephone"? What does</li> <li>that say?</li> <li>A. Right. Sa what happens is</li> <li>that the child has the surgery 12/1,7</li> <li>and the next note that I came across in</li> <li>the neurosurgical notes, there were a</li> <li>series of images which I didn't include</li> <li>in here, but the next patient contact</li> <li>was 1/16/98, or at least that's the next</li> <li>one that's in the records, and it's a</li> <li>telephone contact.</li> <li>Now, I was a bit confused</li> <li>by this note at the end. The note said</li> <li>the patient had severe neck pain, very</li> <li>irritable, appears and has been</li> <li>complaining of this headache and double</li> <li>vision for about two weeks, but then at</li> <li>the end of the note it says that it was</li> <li>getting it was, quote, slightly</li> <li>improved with some medication so I it</li> <li>looked like almost it was two notes</li> <li>combined into one under the same date.</li> <li>So it was very confusing to me. It was</li> <li>almost like they had called before, they</li> <li>said take this, and, well, did you take</li> </ul>	Page 27	<ol> <li>double vision since the beginning, I</li> <li>mean, headache, irritability, stiff</li> <li>neck, double vision from the beginning</li> <li>of January. I couldn't find any note</li> <li>that anything was done or the patient</li> <li>was even seen until there's an</li> <li>ophthalmology note, a Community</li> <li>ophthalmology note, not a Cleveland</li> <li>Clinic note, of 2/9/98.</li> <li>MS. TOSTI: Can I make</li> <li>one correction here?</li> <li>The dates that the doctor</li> <li>has reported for that one telephone</li> <li>call, he's got the 16th down but I</li> <li>think that this may be the one that</li> <li>you're talking about, which I think is</li> <li>dated the 26th and I don't know if</li> <li>maybe</li> <li>THE WITNESS: Yes. And I</li> <li>don't know why oh, I put</li> <li>16th but it's actually dated on the</li> <li>26th.</li> <li>THE WITNESS: Okay. So</li> </ol>	Page 29

6	BY MS. CARULAS:		6	get out of bed, et cetera, et cetera,	
7	Q. I want to get a feel for		7	frequent outbursts, to the point where	
8	what these notes say.		8	he was even seeing a psychologist, I	
9	A. Right.		9	believe. And then there was this	
10			10	recommendation for more surgery but	
11			11	there wasn't an examination. I mean,	
12	ophthalmologist and the ophthalmologist		12		
13	says, oh, you've got papilledema.		13	well, go to the pediatric neurologist	
14	Q. And what does this mean?		14	for an examination before the surgery.	
15	"Nothing done except" what is that		15	Now, that doesn't happen for another	
16	word?		16	week.	
17	A. Well, nothing was done from	1	17	Q. So your next note is	
18	the beginning of January until he saw		18	"4/14/98, also notes noise, right ears,	
19	the ophthalmologist except re-imaging.	1	19	starting two months ago. States if"	
20	Q. "Nothing done except	2	20	A. States that the visual field	
21	re-imaging" is what it says there.	2	21	was normal but there's no note that it	
22	Okay.	2	22	was ever tested.	
23	And then "2/10/98,	2	23	Q, Okay.	
24	headache persists."	2	24	A. I mean, the note doesn't say	
25	A. Right. So what happens, he	2	25	we tested the visual, we did this.	
	Pag	e 31			Page 33
1	sees the ophthalmologist 2/9, he says,		1	There's no it just says vision	
2	"My God, you've got papilledema, you've		2	normal, vision field normal. Doesn't	
3	got to go see the neurosurgeon," who		3	test it. But he whoever it was who	
4	sees him the next day.		4	examined the patient and it says 11	

5 The neurosurgical note, 5 tested it, right, Roman numeral II, 6 very scant, says, headaches persist, 6 there's no indication they ever checked 7 and, quote, rule out papilledema. Given 7 his vision. 8 Diamox. Follow up by phone. But it 8 Q. Okay. So --9 was a rule out. I mean, there was no 9 A. And I would doubt a 10 documentation that the patient had or 10 neurologist checked the patient's vision 11 did not have papilledema and there was 11 by having them reading an eye chart. 12 no treatment plan or follow-up plan for 12 So that can't be can't right. But he's 13 the papilledema. 13 admitted as an emergency the same day I'm sorry. There was no 14 14 after four months, admitted as an 15 follow-up plan. He was being treated 15 emergency and has surgery the next day. 16 for increased intracranial pressure by 16 Q. And, again, I'm just trying 17 being given Diamox but there was no plan 17 to find out at this point ---18 to look for the consequences of 18 A. I understand. papilledema, of chronic papilledema, 19 19 Q. So what you're saying here, which happens when you get papilledema Roman numeral "II intact but how was it 20 20 21 and increased intracranial pressure. 21 tested?" 22 22 Q. Let's go to the next page A. Right. 23 here. 23 Q. "Noted papilledema." 24 A. April 7th was the next note. 24 A. Right. 25 And he -- now we're in April. It's a 25 Q. "Admitted emergently same day

<ul> <li>to do with that.</li> <li>A. No, not a thing.</li> <li>Q. Did not make any suggestion?</li> <li>A. No, not a thing.</li> <li>Q. Just coincidence that it</li> <li>happened to be.</li> <li>A. Absolutely.</li> <li>Q. Prior to testifying at the</li> <li>trial of this case, as you sit here</li> <li>today, is there any other information</li> <li>that you think you need in order to</li> <li>provide opinions to the jury, or do you</li> <li>feel that you have all the information?</li> <li>A. Well, I mean, obviously, I</li> <li>don't know if I have all of the</li> <li>information. I went over with you the</li> <li>lack of a preoperative note. Obviously,</li> <li>if there is that bit of information and</li> <li>I don't have it, that's important</li> <li>information. So I don't really know how</li> <li>to answer that question.</li> <li>Q. But so there's that</li> <li>particular instance. Is there anything</li> <li>else that strikes you that you know,</li> <li>for instance, an exam. You've told me</li> </ul>		<b>1</b> 2 3 4 5 6 7 8 9 10 <b>11</b> 12 13 14 15 16 17 18 19 20 21 22 23 24 25	thought, I need to go to this textbook and look this up or I need to review this or that beforehand. A. No. Q. Now, do you plan to testify as to the standard of care for a pediatric neurosurgeon? A. No. I no. Q. Your practice has always been exclusively in ophthalmology or neuro-ophthalmology, A. That's correct. Q. Now A. And, you know, the standard-of-care issue, I'm obviously not a neurosurgeon and not a pediatric neuro-ophthalmologist, there are many diseases that I share with neurologists, neurosurgeons, pediatric neurologists, et cetera, and there are standard-of-care issues. So, I mean, I couldn't tell whether a neurosurgeon is technically up to the standard of care but there are certain disorders that I	
<ul> <li>you don't feel it's necessary for your opinions that you examine Kevin;</li> <li>correct?</li> <li>A. Correct.</li> <li>Q. Is there anything that as you reviewed these materials besides</li> <li>this preoperative evaluation that you said, wow, I really need that in order</li> <li>to complete my picture here?</li> <li>A. Well, if he had other</li> <li>evaluations that are not in here; in</li> <li>other words, if he had certain tests</li> <li>done that I'm saying should have been</li> <li>done but weren't and they were done,</li> <li>then that would be important for me to</li> <li>know too.</li> <li>Q. Anything else that strikes</li> <li>you that you</li> <li>A. I don't really know what</li> <li>you're asking me. I don't know how to</li> <li>answer it. I mean, if you want to be</li> <li>more specific, I'm happy to</li> <li>Q. No. I just need to know if</li> <li>there's anything that off the top of</li> <li>your head that as you sat here you</li> </ul>	Page 43		co-manage or see with neurosurgeons that there is a certain standard <i>d</i> care that I believe that I can testify to. Q. Well, that's what I'm here to find out about. You yourself have never practiced pediatric neurosurgery. A. No. Q. And let me to state the obvious, you're not Board-certified in neurosurgery. A. No. Q. And you wouldn't be eligible to take that test. A. That's correct. Q. And so if one were would say to you, Dr. Savino, do you feel comfortable stating what is the standard of care for a pediatric neurosurgeon, you would defer that to a pediatric neurosurgeon. A. Not necessarily. For example, if ∎see a child who has a neurosurgical lesion and they have visual problem and the neurosurgeon	Page 45

1	says, we don't need to take care of	1	Marcotty did have a plan to see Kevin	
2	this because and ∎know they're wrong,	2	in follow-up.	
3	he's not he's that's a neuro	3	A. Yes.	
4	he's a neurosurgeon, a pediatric	4	Q. And I mean, that would be a	
5	neurosurgeon, but he's not up to the	5	reasonable thing for him to do?	
6	standard of care for that particular	6	A. Yes.	
7	lesion.	7	Q, Okay.	
8	Q. Okay.	8	A. Or send it to someone that	
9	A. See, that's the problem.	9	is going to take care of it. Doesn't	
10	That's where the crossover is.	10	have to see the patient back. If he	
11	Q. Well, ∎guess my question	11	says, look, I don't want to do this,	
12	is, do you plan at the trial of this	12	it's not what ∎do, I'm going to send	
13	case to testify that Dr. Luciano	13	him up to you, you take care of it.	
14	deviated from acceptable standards of	14	Q. But if he chose to follow up	
15	care for a pediatric neurosurgeon?	15	and see the patient as well, that's	
17	A. For a pediatric neurosurgeon with a child with papilledema, yes.	16	certainly within his province as well.	
18		18	A. Yes. If it's within his	
19	Q. Do you plan to testify at all that Dr. Marcotty, the pediatric	19	area of expertise and he's comfortable	
20	ophthalmologist, deviated from	20	dealing with it, yes, that's right.	
21	acceptable standards of care?	21	Q. Well, why don't you tell me and list for me so ∎know exactly what	
22	A. No.	22	you your planned criticisms are what	
23	Q. You've reviewed his care.	23	you plan to testify at the trial are	
24	A. Yes.	24	your criticisms of Dr. Luciano.	
25	Q. And you believe that he	25	A. Well, in a nutshell, we have	
			- ,	

#### Page 47

	Tage 17		
1	appropriately evaluated Kevin.	1	a child who had papilledema, it became
2	A. Yes.	2	chronic and it was not evaluated or
3	Q. And you believe that he made	3	treated adequately and, as a result,
4	appropriate recommendations to Kevin.	4	he's permanently blind in one eye.
5	A. Well, he he made he	5	Q. When did the papilledema
6	evaluated him once and had two choices	6	develop?
7	that I think were equally valid. He	7	A. The papilledema probably,
8	didn't completely evaluate him for a kid	8	most likely, almost assuredly, developed
9	who has papilledema but he sent him to	9	at the beginning of January of 1998.
10	on a neurosurgeon, which is the right	10	Q. And what is your basis for
11	thing to do, and to an institution where	11	that?
12	there are people like	12	A. Because he had the classic
13	neuro-ophthalmologists that could	13	symptoms of increased intracranial
14	evaluate him better than Dr. Marcotty	14	pressure, and that's what causes
15	could. So I think he did what he was	15	papilledema, increased intracranial
16	supposed to do.	16	pressure.
17	Q. But a pediatric	17	Q. Okay.
18	ophthalmologist can evaluate a patient	18	A. Plus he had had a
19	such as this as well.	19	neurosurgical operation. And it's not
20	A. That's correct.	20	unusual for people to have increased
21	Q. They're qualified to do it	21	intracranial pressure after a
22	as well as a neuro-	22	neurosurgical operation. So if you
23	ophthalmologist would be.	23	combine that with the classic symptoms,
24	A. Sometimes.	24	it's, you know, a medical student
25	Q. And you saw that Dr.	25	diagnosis, essentially.

Page 49

	Page SO	р	age 52
<ul> <li>Q. An# what were the classic symptoms that he had?</li> <li>A. Well, he has headaches, he has double vision, and after a</li> <li>neurosurgical operation, those are the warning signs of increased intracranial pressure, particularly to double vision.</li> <li>I mean, people who have neurosurgical can have headaches but usually the headaches tend to subside. But if you 1% have increasing headaches and double vision, that's a warning sign that the pressure is high.</li> <li>Q. So to recap, it would not be unusual for a patient such as this to have headaches for some time, actually, after this neurosurgical procedure.</li> <li>A. Idon't know exactly.</li> <li>Again, it's not my area of expertise.</li> <li>I would expect that you can have headaches after a neurosurgical priends tell me, oh, no, that's just not the case; they sort of come out of it normally. But I would would not</li> </ul>		<ul> <li>logical to assume that those symptoms</li> <li>were due to increased intracranial</li> <li>pressure. In fact, it's illogical to</li> <li>assume that they were not.</li> <li>Q. Imean, did this patient</li> <li>have increased intracranial pressure</li> <li>back at the time of the neurosurgery</li> <li>procedure?</li> <li>A. The first neurosurgical</li> <li>procedure? Idon't know. No one</li> <li>looked at his optic nerves. So he</li> <li>could have had papilledema before the</li> <li>first surgery was even done. That's</li> <li>correct.</li> <li>Q. So as far as when it</li> <li>developed, you are unable to say</li> <li>specifically when it developed other</li> <li>than it was present on February 9th.</li> <li>A. No, that's not true. What I</li> <li>said was he had signs and symptoms that</li> <li>were unequivocally increased</li> <li>intracranial pressure from at least the</li> <li>beginning of January and had the</li> <li>papilledema documented on February 9th</li> </ul>	
<ul> <li>have that sort of a problem. But a</li> <li>patient who has double vision or has</li> <li>increasing severity of headache, that's</li> <li>not supposed to happen.</li> <li>Q. As far as the length that</li> <li>one would have a headache following a</li> <li>neurosurgery procedure, that's something</li> <li>that you would defer to a pediatric</li> <li>neurosurgeon on that.</li> <li>A. Yes. But here it's more or</li> <li>less of a moot point because on February</li> <li>9th it was diagnosed I mean, an</li> <li>ophthalmologist saw him and they saw his</li> <li>optic nerves were swollen. He had</li> <li>you don't develop he didn't go to</li> <li>the ophthalmologist on February 9th and</li> <li>develop it that morning. You develop</li> <li>papilledema over days and weeks, And if</li> <li>a patient has the symptoms of increased</li> <li>intracranial pressure and then two weeks</li> <li>later and they're getting worse and</li> <li>two weeks later he goes to see an</li> <li>ophthalmologist who says, gee, you have</li> <li>papilledema, you have increased</li> <li>intracranial pressure, it is absolutely</li> </ul>		<ul> <li>Pate 1</li> <li>weeks or six weeks are entirely</li> <li>consistent with what was found on</li> <li>February 9th. It would be illogical to</li> <li>think that they were due to anything</li> <li>else.</li> <li>Q. Now, when you talk about</li> <li>papilledema in this setting, I've read</li> <li>about the condition called pseudotumor</li> <li>cerebri. Is that</li> <li>A. Yes.</li> <li>Q. Is this a similar situation</li> <li>to that?</li> <li>A. Pseudotumor cerebri is a</li> <li>disorder that has very strict</li> <li>definitions. It is increased</li> <li>intracranial pressure with no mass</li> <li>lesions in the brain, in the skull,</li> <li>normal-size ventricles and a normal</li> <li>cerebrospinal fluid except for increased</li> <li>pressure. That's the definition.</li> <li>Q. Would what Kevin had be a</li> <li>similar situation to that?</li> <li>A. No. I mean, he had he</li> <li>had an arachnoid cyst, he had had</li> <li>neurosurgery, so no he doesn't have</li> </ul>	ıge 53

5	general flavor of the case. I need to		5	you have to evaluate something before	
6	know specifics.		6	the medicine starts and after it's given	
7	What is the first thing		7	to determine whether your trial is	
8	that you think Dr. Luciano did that		8	working or not. And the thing that had	
10	deviated from acceptable standards of care?		9 10	to be done was he just had to be sent down the hall to Dr. Kosmorsky for a	
11	A. From my standpoint as a			vision, for a neuro-ophthalmologic	
12	neuro-ophthalmologist, he didn't pay			examination. What happened essentially	
13	attention to the papilledema and		13		
14	evaluate it or make sure that someone		14	· ·	
15	was evaluating it to prevent the only		15	recognized or were ignored.	
16	real consequence of chronic papilledema,		16	Q. So what should he have done	
17			17	at that point?	
18	thing that you have to watch out for.		18	A. He should have either taken	
19	And you it's easy to do. You just		19	care of it himself or referred it to	
20	do a visual field on a patient, you		20	someone who could have monitored this	
21	check their vision every once in a		21	child who had papilledema for visual	
22	while, you look in the back of their		22	loss, which is the only, only	
23	eyes. That's what you need to do in		23	consequence, permanent consequence, of	
24	every patient who's got papilledema.		24	papilledema, particularly since he was	
25	Q. And when do you believe he		25	treating him for it.	
		Page 55			Page 57
	for the block of the state	Page 55			Page 57
1	first should have done that?	Page 55	1	Q. And what is involved in the	Page 57
2	A. When the patient after the	Page 55	2	monitoring?	Page 57
2 3	A. When the patient after the surgery started complaining of	Page 55	2 3	monitoring? A. You check visual acuity by	Page 57

<b>1</b> 2 3 4 5 6 7 8 9 10 <b>11</b> 12 13 14 15 16 17 18 19 20 21 22 23 24 25	<ul> <li>A. Well, when it's too late, it's when it's flat and pale. Before that, you never know if it's too late until you treat it.</li> <li>Q. What is the point in time where papilledema exists and let me start over.</li> <li>Papilledema is just a sign; correct? Imean, papilledema is not a condition itself.</li> <li>A. That's correct. It's a sign of a variety of conditions but it it means when we as neuro-ophthalmologists talk about papilledema, there's only one cause, and that's increased intracranial pressure.</li> <li>So it is a sign of increased intracranial pressure.</li> <li>Q. Nothing else could cause papilledema.</li> <li>A. Not the way neuro-ophthalmologists use the term.</li> <li>Q. Others may use it differently?</li> <li>A. Incorrectly. They may use</li> </ul>		<b>1</b> 2 3 4 5 6 7 8 9 <b>10</b> <b>11</b> 12 13 14 15 16 17 18 19 20 21 22 23 24 25 	<ul> <li>is and we're talking back in '97 is it well documented and well known that formal visual fields can be difficult in a child?</li> <li>A. It I don't know what difficult means. Are there some children you can't do visual fields on? Yes. But the only time you know is after you try, and if you can't do it, you can't do it.</li> <li>Q. Are there some pediatric ophthalmologists or neuro-ophthalmologists that prefer confrontational visual fields to check a child's vision?</li> <li>A. Instead of formal perimetry?</li> <li>Icertainly hope not.</li> <li>Q. So you would advocate in all children at all times a formal visual field is always better than a confrontational visual field.</li> <li>A. Absolutely.</li> <li>Q. And there are no circumstances where you as a neuro-ophthalmologist are unable to get</li> </ul>	T age of
		Page 63			Page 65
1 2 3 4 5 6 7 8 9 10 11 12 13	it incorrectly. Q. You would agree that generally out in the community others there's some disagreement or variance in the use of the word "papilledema." A. That's why I made the statement that when I say papilledema and when Dr. Kosmorsky says papilledema and when Dr. Hedges says papilledema, it's it means a specific condition that's due to increased intracranial pressure. Q. Now, as far as visual fields		1 2 3 4 5 6 7 8 9 10 11 12 13	a good visual field, formal visual field, on an eight-year-old child. A. That's not what Isaid. What Isaid was you try it on every child, and if you can do it, that's better, much better, than confrontational fields. If you can't get it, then you have to do some other way to test the visual fields, if you have to. And that's when confrontational fields come in, only after you've had the kid prove to you that they can't do the formal perimetry.	

14 Q. And you would go on to the 15 next step of a confrontational visual 16 field?

A. You do the -- you do the 17 18 next best thing. It's not anywhere near 19 as good and doesn't give you anywhere 20 near as good information but it's better 21 than no information at all.

- Q. So there's value to it.

  - A. If done correctly, yes.

24 Q. Now, as you look back and 25 attempt to reconstruct what took place

<ul> <li>here, are you able to say to a</li> <li>reasonable degree of medical probability</li> <li>what a visual field, a formal visual</li> <li>field or a confrontational visual field,</li> <li>would have shown in early February of</li> <li>1998?</li> <li>A. Given what his visual field</li> <li>turned out to be, you can very easily</li> <li>go back and reconstruct what the pattern</li> <li>of his visual field loss would be</li> <li>because it's very well known what the</li> <li>pattern of visual loss is in chronic</li> <li>papilledema. He would have started to</li> <li>have a bit of peripheral loss, Re may</li> <li>have even started to have that in</li> <li>February, because you can get that a</li> <li>month or two out, but certainly by March</li> <li>or April he probably would have had</li> <li>marked constriction of the visual field,</li> <li>and by the time the vision goes down to</li> <li>below 20/30 or 20/40 the visual field is</li> <li>severely compromised.</li> <li>Q. You said that in February of</li> <li>'98it's possible that there would have</li> </ul>		1       question for you. And if you have the         2       opinion, fine; if you don't, that's fine         3       too. I just need to know for my         4       purposes later what your testimony will         5       be.         6       As you sit here today,         7       are you able to say that in February of         8       1998, had a visual field been performed,         9       that he would have more likely than not,         10       as opposed to he possibly, could have         11       had a visual field?         12       A. Given the information that's         13       there, yes, he probably he would         14       have, within a reasonable degree of         15       medical certainty, had some sort of         16       visual field deficit.         17       Q. And the basis for that is         18       the fact that he was 20/30 in the one         19       eye?         20       A. Is that he had papilledema         21       Q. Anything else that leads you         22       Q. Anything else that leads you         23       to that conclusion?         24       A. No.         25       Q. Now, if you I may have
	Page 67	Page 69
<ol> <li>And I guess my question is, are you</li> <li>able to state to a reasonable degree of</li> <li>medical probability more likely than not</li> <li>that a visual field in February of 1998</li> <li>would have shown something?</li> <li>A. I think that the answer to</li> <li>that is yes because, you know, part of</li> <li>my limitation is the tests weren't done.</li> <li>You know, the tests that needed to be</li> <li>done weren't done. However, when he did</li> <li>see the ophthalmologist in February, he</li> <li>did not have normal vision even at that</li> <li>time. His vision in his left eye was</li> <li>down to 20/30, I believe, whereas</li> <li>vision, it's 20/20, so that my suspicion</li> <li>is he was beginning to get some visual</li> <li>difficulty even at that time.</li> <li>Q. Okay.</li> <li>A. So there is a good degree of</li> <li>medical probability that he could have</li> <li>had a visual field deficit even at that</li> <li>time.</li> <li>Q. And that's where we're</li> <li>getting caught up into the could have</li> <li>and would have. Okay? And that's my</li> </ol>		<ul> <li>asked you this already and if I did, I</li> <li>apologize.</li> <li>Is there any role for</li> <li>Diamox in this setting, in your opinion?</li> <li>A. Diamox is used to treat</li> <li>pseudotumor cerebri. This child did not</li> <li>have pseudotumor cerebri. Whether</li> <li>neurosurgeons use Diamox to treat</li> <li>increased intracranial pressure</li> <li>postoperatively routinely or after</li> <li>fenestration of subarachnoid cysts I</li> <li>don't really know, but there was no role</li> <li>to treat this child as if he had</li> <li>pseudotumor because he didn't.</li> <li>Q. You confused me with this,</li> <li>If it turns out that in</li> <li>this setting following a cyst such that</li> <li>Kevin had that the pediatric</li> <li>neurosurgery community does use Diamox</li> <li>in this setting, you would defer to them</li> <li>on that.</li> <li>A. Sure. However, the where</li> <li>it was lacking is that if they were</li> <li>treating him, if you treat somebody for</li> <li>anything, you have to monitor them to</li> </ul>

<b>1</b> 2 3 4 5 6 7 8 9 10 <b>11</b> 12 13 14 15 16 17 18 19 20 21 22 23 24 25	<ul> <li>see if your treatment is working. So if they were treating him for his headache and his headache went away, that's fine. So either they were not treating him for his papilledema because they weren't monitoring it or they were treating him for his papilledema and they weren't monitoring him. So either way, it's a problem.</li> <li>Q. So what is the frequency of monitoring in a setting such as this? So, you know, we know that Dr. Marcotty obtained a he checked the vision; right? 20/20 in one eye, 20/30 in the other.</li> <li>A. 20/25 in one eye, 20/30 in the other.</li> <li>Q. Assuming for the sake of argument that a visual field was done at that point in time, okay, what would be the next step as far as monitoring of the patient?</li> <li>A. It depends on a couple of factors. It depends on what the visual field shows at the first test and what</li> </ul>		<b>1</b> 2 3 4 5 6 7 8 9 <b>10</b> <b>11</b> 12 13 14 5 6 7 8 9 <b>10</b> <b>11</b> 12 13 14 5 6 7 8 9 <b>10</b> 12 13 14 5 6 7 8 9 <b>10</b> 20 21 22 23 24 25 22 24 25 22 24 25 22 24 25 22 24 25 22 24 25 26 27 20 20 20 20 20 20 20 20 20 20 20 20 20	<ul> <li>A. It has no role in evaluation of papilledema unless you're looking for the cause of the increased intracranial pressure.</li> <li>What I'm talking about is increased intracranial pressure is causing a problem. That problem is going to cause the other problem. So you'd have to monitor the effect of the increased intracranial pressure, which is the papilledema, which is going to cause the blindness. And that's not</li> <li>Q. So the amount of fluid on the scan has no</li> <li>A. Nothing. It has nothing to do with this.</li> <li>Q. And why is that?</li> <li>A. Because we know, for example, in the pseudotumor patients that their scans look normal yet their pressure is still high.</li> <li>Q. Now, I know you've not had the benefit of reading Dr. Cohen's testimony in this case, who's a pediatric neurologist, but he testified</li> </ul>	
		Page 71			Page 73
<b>1</b> 2 3 4 5 6 7 8 9 10 <b>11</b> 12 13 14 15 16 17 18 19 20 21 22 24 25	the optic nerves look like. If at the first test in any patient that you're looking at with papilledema the optic nerves look like it's acute papilledema and they have no visual field defect, you may see them back in two, three months. If the patient has a visual field defect and the appearance of the optic nerve is tending towards this chronicity that we talked about before, it's just sort of grayish, it's got these things there, it's elevated, et cetera, et cetera, you may want to do it a little bit more frequently, four weeks, something like that. Q. Now, does the imaging in this case, did that play any role? A. No. Q. So CT scans were of no benefit in evaluating the amount of fluid and increased intracranial pressure. A. No. Q. And why is that?		<b>1</b> 2 3 4 5 6 7 8 9 <b>10</b> 11 12 13 14 15 16 17 18 9 20 21 22 3 24 25	that in April he performed both a vision check as well as a confrontational visual field and that they were both intact, normal. A. Well, I mean, Thaven't read his deposition but I read his note and I understand he said that. Q. Uh-huh. A. There's I don't know how he checked his vision. He didn't I mean, a pediatric neurologist checking a patient's visual acuity? I don't think so. I mean, Tdeal with pediatric neurologists all the time, and Tcan tell you there's nothing with regard to confrontational visual fields. Neurologists just don't know how to check confrontational visual fields. It is the single most difficult thing that I have to teach neurology residents. It is it's something that is just not reliable enough. You do it, Tencourage them to do it, but it's not reliable enough in their hands. Q. Why would you encourage them

If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell	1 2 3 4 5 6 7 8	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient	Page 77
2 3 4 5 6 7 8 9 10 11	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that	1 2 3 4 5 6 7 8 9	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function	Page 77
2 3 4 5 6 7 8 9 10 11 12	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal.	1 2 3 4 5 6 7 8 9 10 11 12	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that.	Page 77
2 3 4 5 6 7 8 9 10 11 12 13	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting	1 2 3 4 5 6 7 7 8 9 10 11 12 13	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes.	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and	1 2 3 4 5 6 6 7 8 9 10 11 12 13 14	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes. Q. We know that this patient	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of	1 2 3 4 5 6 7 7 8 9 10 11 12 13 14 15	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes. Q. We know that this patient underwent a shunt in April. Shunt was	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of cooperation issues, then you went on and	1 2 3 4 5 6 7 7 8 9 10 11 12 13 14 15 16	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes. Q. We know that this patient underwent a shunt in April. Shunt was placed; correct?	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 19	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of cooperation issues, then you went on and you did a confrontational visual field	1 2 3 4 5 6 7 7 8 9 10 11 12 13 14 15 16 17	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes. Q. We know that this patient underwent a shunt in April. Shunt was placed; correct? A. Yes.	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 19 18	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of cooperation issues, then you went on and you did a confrontational visual field and you found it to be intact, what	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 <b>18</b>	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes. Q. We know that this patient underwent a shunt in April. Shunt was placed; correct? A. Yes. Q. You would agree that the	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 19	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of cooperation issues, then you went on and you did a confrontational visual field and you found it to be intact, what would that lead you to do?	1 2 3 4 5 6 7 7 8 9 10 11 12 13 14 15 16 17	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes. Q. We know that this patient underwent a shunt in April. Shunt was placed; correct? A. Yes. Q. You would agree that the placement of a shunt itself can cause	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 19 18 19 20 21	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of cooperation issues, then you went on and you did a confrontational visual field and you found it to be intact, what	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes. Q. We know that this patient underwent a shunt in April. Shunt was placed; correct? A. Yes. Q. You would agree that the placement of a shunt itself can cause it has a complication rate; correct?	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 19 18 19 20 21 22	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of cooperation issues, then you went on and you did a confrontational visual field and you found it to be intact, what would that lead you to do? A. Well, if it was a patient like this or any patient who I thought had chronic papilledema, I would look at	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A. Yes. Q. We know that this patient underwent a shunt in April. Shunt was placed; correct? A. Yes. Q. You would agree that the placement of a shunt itself can cause it has a complication rate; correct? A. I suspect. Q. Do you know what the	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 19 18 19 20 21 22 23	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of cooperation issues, then you went on and you did a confrontational visual field and you found it to be intact, what would that lead you to do? A. Well, if it was a patient like this or any patient who I thought had chronic papilledema, I would look at the optic nerve and I would say, you	1 2 3 4 5 6 7 7 8 9 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. From the time that the ophthalmologist noted that there was papilledema and the neurosurgeon assumed that there was increased intracranial pressure, because he treated the patient with Diamox, the optic nerve function had to be monitored. Q. And we've talked about that. A Yes. Q. We know that this patient underwent a shunt in April. Shunt was placed; correct? A. Yes. Q. You would agree that the placement of a shunt itself can cause it has a complication rate; correct? A. I suspect. Q. Do you know what the complications are from shunt placement,	Page 77
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 19 18 19 20 21 22 23 24	notating a very cursory examination of things. Q. If for the sake of argument that this confrontational visual field was done by you, okay, In April and was the same finding that Dr. Cohen has testified he found, what would that tell you? A. It would just tell me that the confrontational fields were normal but it wouldn't mean that the visual fields were normal. Q. So if you had a setting where formal visual fields were done and they weren't reliable because of cooperation issues, then you went on and you did a confrontational visual field and you found it to be intact, what would that lead you to do? A. Well, if it was a patient like this or any patient who I thought had chronic papilledema, I would look at the optic nerve and I would say, you know, that optic nerve is either	1 2 3 4 5 6 7 7 8 9 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	the neurosurgeon's office, increasing headache, double vision, that should have been the diagnosis that was taken into account. 1	A. If Idid that or someone		1	You would not disagree,	
2	showed me a photograph that that what		2	would you, that Dr. Hedges's opinion as	
3	you stated was true, yes, you're not		3	to what took place here would be a	
4	going to do an operation because		4	possibility?	
5	someone just because someone has		5	<b>A.</b> Oh, I think it's so	
6	increased intracranial pressure to		6	extraordinarily unlikely, Iwas	
7	protect their optic nerves but I you		7	surprised to see it.	
8	can't give me that information because		8	Q. You don't see any way that	
9	no one collected it here. And that's		9	that could ever have played a role here.	
10	the problem.		10	<b>A.</b> Given given the entire	
11	Q. Now, you've read the report		11	bits of information that we had, if	
12	of Dr. Hedges.		12	if I presented this patient to Tom	
13	A. Yes.		13	Hedges, his first diagnosis would have	
14	Q. And we've discussed already		14	been chronic papilledema with visual	
15	this phenomenon of the post-shunt events		15	loss, as was Dr. Kosmorsky's, the	
16	that can occur.		16	neuro-ophthalmologist, as was Dr.	
17	While you've said you		1.7	Jeffery's, Amy Jeffery's, the	
18	yourself have not you've never		18	neuro-ophthalmologist. I was surprised	
19	observed that in a patient yourself?		19	to see it.	
20	A. Well, what I said is I've		20	Q. Tell me, what <b>is</b> your	
21	seen patients who have lost vision after		21	understanding as to how the visual loss	
22	a neurosurgical procedure that lowered		22	was detected in this case?	
23	intracranial pressure when that patient		23	A. Again, because Dr. Kosmorsky	
24	ha5 had chronic papilledema,		24	didn't see the patient until July, there	
25	Q. Okay.		25	was some something in something I	
		Page 91			Page 93
1	A. The shifting stuff, ∎don't	Page 91	1	read about the child was having some	Page 93
2	A. The shifting stuff, ∎don't know what that is. And even if you	Page 91	1 2	read about the child was having some difficulty in sports or something after	Page 93
		Page 91			Page 93
2	know what that is. And even if you	Page 91	2	difficulty in sports or something after	Page 93
2 3	know what that is. And even if you believe that a rapid lowering of	Page 91	2 3	difficulty in sports or something after the second operation. He had been	Page 93
2 3 4	know what that is. And even if you believe that a rapid lowering of intracranial pressure causes some sort of problem, there are essentially two provisos. One is, as Dr. Hedges says,	Page 91	2 3 4	difficulty in sports or something after the second operation. He had been complaining of double vision all the	Page 93
2 3 4 5 6 8	know what that is. And even if you believe that a rapid lowering of intracranial pressure causes some sort of problem, there are essentially two provisos. One is, as Dr. Hedges says, it's extraordinarily rare. I mean, he	Page 91	2 3 4 5	difficulty in sports or something after the second operation. He had been complaining of double vision all the time but no no one ever sort of talked about decreased acuity until I think he Rad some problem with sports	Page 93
2 3 4 5 6 8	know what that is. And even if you believe that a rapid lowering of intracranial pressure causes some sort of problem, there are essentially two provisos. One is, as Dr. Hedges says, it's extraordinarily rare. I mean, he uses the word "rare." And, secondly "-	Page 91	2 3 4 5 6 7 8	difficulty in sports or something after the second operation. He had been complaining of double vision all the time but no no one ever sort of talked about decreased acuity until I think he Rad some problem with sports and then and then he finally got to	Page 93
2 3 4 5 6 8 9	know what that is. And even if you believe that a rapid lowering of intracranial pressure causes some sort of problem, there are essentially two provisos. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't	Page 95	2 3 4 5	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span,	Page 97
2 3 4 5 6 8	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it.	Page 95	2 3 4 5 6 7 8	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye,	Page 97
2 3 4 5 6 8 9	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one	Page 95	2 3 4 5 6 7 8 9	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any	Page 97
2 3 4 5 6 <i>a</i> 8 9 10	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your	Page 95	2 3 4 5 6 7 8 9 10	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one	Page 97
2 3 4 5 6 8 9 10 11	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would	Page 95	2 3 4 5 6 7 8 9 10 <b>11</b>	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare.	Page 97
2 3 4 5 6 a 8 9 10 11 12	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the	Page 95	2 3 4 5 6 7 8 9 10 11 12	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function?	Page 97
2 3 4 5 6 a 8 9 10 11 12 13	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal	Page 95	2 3 4 5 6 7 8 9 10 11 12 13	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do?	Page 97
2 3 4 5 6 8 9 10 11 12 13 14	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And	Page 95	2 3 4 5 6 7 8 9 10 11 12 13 14	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry	Page 97
2 3 4 5 6 8 9 10 11 12 13 14 15	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of	Page 95	2 3 4 5 6 7 8 9 10 11 12 13 14 15	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry more than someone who's 80 and lost one	Page 97
2 3 4 5 6 <i>a</i> 8 9 10 <b>11</b> 12 13 14 15 16	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of it and the fact that the other eye is	Page 95	2 3 4 5 6 7 8 9 10 12 13 14 15 16	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry more than someone who's 80 and lost one eye because they only have a lot less	Page 97
2 3 4 5 6 8 9 10 11 12 13 14 15 16 17	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of it and the fact that the other eye is normal.	Page 95	2 3 4 5 6 7 8 9 10 11 12 13 14 15	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry more than someone who's 80 and lost one eye because they only have a lot less time frame for them to be carried with	Page 97
2 3 4 5 6 8 9 10 11 12 13 14 15 16	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of it and the fact that the other eye is	Page 95	2 3 4 5 6 7 8 9 10 12 13 14 15 16 17	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry more than someone who's 80 and lost one eye because they only have a lot less time frame for them to be carried with their remaining good eye.	Page 97
2 3 4 5 6 8 9 10 11 12 13 14 15 16 17 18	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of it and the fact that the other eye is normal. Q. What is the vision loss he	Page 95	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry more than someone who's 80 and lost one eye because they only have a lot less time frame for them to be carried with	Page 97
2 3 4 5 6 8 9 10 11 12 13 14 15 16 17 18 19	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of it and the fact that the other eye is normal. Q. What is the vision loss he has?	Page 95	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry more than someone who's 80 and lost one eye because they only have a lot less time frame for them to be carried with their remaining good eye. Q. What are the things when you say he can't do, what are the things he can't do?	Page 97
2 3 4 5 6 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of it and the fact that the other eye is normal. Q. What is the vision loss he has? A. Idon't remember offhand.	Page 95	2 3 4 5 6 7 8 9 10 11 12 13 4 15 16 17 18 9 20 21 22	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry more than someone who's 80 and lost one eye because they only have a lot less time frame for them to be carried with their remaining good eye. Q. What are the things when you say he can't do, what are the things he can't do? A. Well, I would not, for	Page 97
2 3 4 5 6 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of it and the fact that the other eye is normal. Q. What is the vision loss he has? A. Idon't remember offhand. It's in Dr. Kosmorsky's note. Ithink his vision was hand movements or count fingers in one eye.	Page 95	2 3 4 5 6 7 8 9 10 11 23 4 5 6 7 8 9 10 11 23 4 5 6 7 8 9 10 11 23 4 5 6 7 8 9 10 11 23 4 5 6 7 8 9 10 11 2 3 4 5 6 7 8 9 10 112 3 4 5 6 7 8 9 10 112 3 14 5 6 7 8 9 10 112 3 14 5 16 7 8 9 10 112 112 112 112 112 112 112 112 112	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. So can he function? Sure. Are there things he can't do? Absolutely. <b>Do</b> I worry? Yeah, I worry more than someone who's 80 and lost one eye because they only have a lot less time frame for them to be carried with their remaining good eye. Q. What are the things when you say he can't do, what are the things he can't do? A. Well, I would not, for example, recommend you can do	Page 97
2 3 4 5 6 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	in their eye, they go like this, cover it and rub it and all of a sudden discover they can't see out of their other eye. So with both our eyes open we see as well as we see out of our better-seeing eye. So you wouldn't necessarily notice it. Decreasing vision in one eye doesn't usually bother your peripheral vision enough that you would notice it. All right? That's the other reason you need to do formal fields. You just don't notice it. And so it's the slowly progressive nature of it and the fact that the other eye is normal. Q. What is the vision loss he has? A. Idon't remember offhand. It's in Dr. Kosmorsky's note. Ithink his vision was hand movements or count fingers in one eye. Q. And was there a difference	Page 95	2 3 4 5 6 7 8 9 10 11 12 13 14 5 6 7 8 9 10 11 21 22 23 24	how I treat them. We give them polycarbonate lenses, protective lenses, we warn them to not do certain activities, not do certain sports, and I worry that a 10-year-old, a 12-year-old kid who's got a 60-, 70-year life-span, if something happens to his other eye, his good eye, which can happen to any of us, he doesn't have that other one as a spare. Recreationally, there	Page: 98	<b>1</b> 2 3 4 5 6 7 8 9 10 <b>11</b> 12 13 14 15 16 17 18 19 20 21 22 23 24 25	fly a plane with one eye. I don't know. Q. Never heard of any pilots that have A. No. Q have one eye. Okay. Would it surprise you if there have been? A. Yes. Q. It would? A. Very much so. Q. Are you aware of have there been a number of successful people with one eye? A. No question. Been a number of successful people with no vision. Q. Sure. Absolutely. A. But no pilots. Q. What's that? A. But no pilots. Q. No. Well, who wants to be a pilot now anyway? Do you believe we have covered all of the areas that you plan to express criticisms of Dr. Luciano?	Page 100
1 2 3 4 5 6 7 8 9 10 11 12 13 4 5 6 7 8 9 10 11 12 13 14 5 16 17 18 19 20 21 22 23 24 25	<ul> <li>there are a whole bunch of things. From a recreational</li> <li>standpoint, if I was the father of a child like this, it's tough not to be</li> <li>overprotective. You know, you've got to walk away from fistfights, you've got to not throw stones. You can't play</li> <li>baseball. I wouldn't have you play</li> <li>hockey. Anything with short, hard, fast-moving objects the kid should avoid.</li> <li>Q. Any child who has a shunt probably cannot shouldn't play football or hockey or that sort of thing.</li> <li>A. I don't know that.</li> <li>Q. You're not familiar with</li> <li>that. Okay.</li> <li>Are there a number of professional athletes that have done very well with one eye?</li> <li>A. I don't know.</li> <li>Q. Can you be a pilot? Have</li> <li>there been pilots with one eye?</li> <li>A. I'm not aware that you can</li> </ul>	Page 99	<b>1</b> 2 3 4 5 6 7 8 9 <b>10</b> <b>11</b> 12 13 14 5 6 7 8 9 <b>10</b> <b>11</b> 12 13 14 5 16 7 8 9 <b>10</b> 11 20 21 22 23 24 25	A. I don't know how to answer that because there are certain things that I hadn't thought of until you asked me the question, so if that comes up again, Imean, obviously, Idon't plan to express any other criticisms about anything that we've talked about as we've talked about them, but if there's a new wrinkle or new information or a new question, then I might have something different to say. Q. Okay. A. Or new to say. Q. We know you wrote a report dated March 27th of 2001. Did you write any other reports other than this? A. No. Q. Would you just take a quick look at that for me, please. A. Okay. Q. And you have your conclusions on the next page, I think. A. Okay. Q. Does that basically encapsulate your opinions in this case?	Page 101
