

STATE OF OHIO
COUNTY OF CUYAHOGA

KIMBERLY RICHLEY, : NO. CV-03-511510
Plaintiff :
vs. :
REICHENBACH FAMILY :
CHIROPRACTIC PROFESSIONAL CO., :
et al, :
Defendants :

VIDEOTAPE DEPOSITION OF GARY A. TAROLA, D.C.

Taken at the offices of Dr. Tarola,
17 North Route 100, Allentown, Pennsylvania, on
Wednesday, September 29, 2004, commencing at 10:11
a.m., before Daniel R. Stout, Certified Court
Reporter, Notary Public.

APPEARANCES:

HOYT, BLOCK
By: MARK W. RUF, ESQUIRE
700 West St. Clair Avenue
Suite 300
Cleveland, Ohio 44113-1230
-- For the Plaintiff

EASTMAN & SMITH
By: MICHAEL W. REGNIER, ESQUIRE
One SeaGate, 24th Floor

THE VIDEOGRAPHER: My name is Robert Stettner. I'm the Video Technician for this deposition. I'm employed by Gallagher Reporting and Video, LLC of 33 South Seventh Street, Suite 105, in Allentown, Pennsylvania.

Today's date is September 29th, 2004. The time is 10:11 a.m. We are located at the office of Dr. Gary Tarola, Chiropractic Associates, Route 100 and Schantz Road in Fogelsville, Pennsylvania.

The caption of this case is In The Court of Common Pleas of Cuyahoga County, Ohio, number CV-03-511510, Kimberly Richley, Plaintiff versus Reichenbach Family Chiropractic Professional, and others, Defendants.

The name of the witness is Dr. Gary Tarola. This deposition is being taken on behalf of the Plaintiff.

Present as counsel for the parties are Mark Ruf via telephone from Toledo, Ohio for the Plaintiff, --

MR. RUF: Cleveland, Ohio.

THE VIDEOGRAPHER: Cleveland, Ohio, and Michael Regnier for the Defendants.

1 The Court Reporter is Dan Stout and
2 the Court Reporter will now swear in the witness.

3 * * *

4 GARY A. TAROLA, D.C., having been
5 duly sworn, was examined and testified as follows:

6 MR. RUF: Before we get started I'd
7 like to put on the record it's my understanding this
8 deposition is being taken by agreement of counsel,
9 is that correct?

10 MR. REGNIER: That's correct.

11 MR. RUF: There's no objection to the
12 manner in which this deposition is being taken, is
13 that correct?

14 MR. REGNIER: That's right.

15 BY MR. RUF:

16 Q. Okay. Doctor, could you state your name,
17 please?

18 A. Gary Tarola.

19 Q. Do you agree that you have not published
20 on the subject of facet fractures?

21 A. That's correct.

22 Q. Do you agree that you have not lectured
23 professionally on the subject of facet fractures?

24 A. That's not correct.

25 Q. When have you given a lecture on facet

1 fractures?

2 A. Well, I've given lectures, numerous
3 lectures on cervical spine problems and whiplash and
4 that -- in the context of those lectures that would
5 include information on cervical spine fractures,
6 including facet type fractures.

7 Q. How many times have you specifically
8 lectured on facet fractures?

9 A. I'd have to look at my CV to, you know,
10 to be able to identify that, but it's been numerous
11 times, at least twenty.

12 Q. Is it true that none of your publications
13 relate to complications from Chiropractic
14 manipulation?

15 A. Not directly, that's correct.

16 Q. Have you ever lectured on complications
17 from Chiropractic manipulations?

18 A. Yes.

19 Q. How many times have you done that?

20 A. I don't know the exact number, but many.

21 Q. Did you ever give out written materials
22 on complications from chiropractic manipulations?

23 A. I believe some of the materials that I
24 would hand out included at least inferences in that
25 regard.

1 Q. Do you still have any of those written
2 materials?

3 A. I'm sure I do.

4 Q. Well, if I would request a copy of those,
5 would you be willing to provide them?

6 A. Yes.

7 MR. RUF: Mr. Regnier, I'm requesting
8 a copy of those materials.

9 MR. REGNIER: Okay. I assume you're
10 going to reimburse the doctor for it?

11 MR. RUF: Sure.

12 BY MR. RUF:

13 Q. Doctor, if I wanted to review the
14 Chiropractic literature for complications from
15 cervical manipulations, what would be an accurate
16 and reliable source to refer to?

17 A. Are you referring just to Chiropractic
18 literature or any medical literature on the topic?

19 Q. Okay. Why don't we say any medical
20 literature on the topic.

21 A. Probably the best source would be to look
22 at the study that was published by the Rand
23 Corporation. I believe that was back in the -- it
24 was in the early '90's, I don't remember the exact
25 year, and that pertained specifically to cervical

1 spine manipulation and complications related to
2 that.

3 That study actually addressed
4 complications of many different medical procedures
5 that would be utilized for people with neck pain and
6 treatment directed to the cervical spine, and that
7 included manipulation.

8 Q. Do you know what the name of that study
9 was?

10 A. The precise name I don't off the top of
11 my head. I can certainly get it for you. But
12 again, it was a study performed by the Rand
13 Corporation, and I have it, I can get it for you. I
14 just don't remember off the top of my head the
15 precise title of the publication.

16 Q. Okay. I'd also request a copy of that.
17 Is it published anywhere?

18 A. It's published in a -- as a text
19 basically, a monograph.

20 Q. What's a monograph?

21 A. It's like a textbook, but it's not a hard
22 cover textbook. It's published as an article, but a
23 very extensive article.

24 Q. Do you know what the name of it was?

25 A. As I just mentioned, I don't recall

1 offhand the precise title.

2 Q. Okay. Thanks.

3 Do you have any books in your office?

4 A. Yes.

5 Q. What books do you have in your office?

6 A. Well, I have many books in my office.

7 Q. Do you have any books on Chiropractic
8 manipulation?

9 A. I have --. Yes, I do.

10 Q. What are some of the books that you have
11 in your office?

12 A. The primary book on Chiropractic
13 manipulation would be a book entitled Principles and
14 Practice of Chiropractic.

15 Q. Do you know who the author is?

16 A. The editor is Scott Haldeman. I've
17 contributed chapters to two of the editions of that
18 textbook.

19 Q. What are your chapters?

20 A. The second edition of the text my chapter
21 was history and physical examination, the third
22 edition which was just released was on documentation
23 and record keeping.

24 Q. Do you consider that publication to be an
25 accurate and reliable source of information?

1 A. Well, I don't know that any text is
2 entirely reliable. It's certainly a very good
3 reference source for Chiropractic and anybody who
4 utilizes manual medicine.

5 Q. You wouldn't put your name on a
6 publication that you thought was inaccurate and
7 unreliable, would you?

8 A. No, I wouldn't.

9 Q. What other texts do you have in your
10 office?

11 A. Well, I have many texts in my office.
12 You'd have to -- I'd either have to spend an hour
13 going through them or if you can be more specific
14 with me with regard to what kind of texts you're
15 looking for.

16 Q. Sure. What types do you have on
17 Chiropractic manipulation of the cervical spine?

18 A. There are no specific texts specifically
19 on Chiropractic manipulation of the cervical spine
20 alone. There are texts that address many issues of
21 the cervical spine and within the context of the
22 texts there is information on Chiropractic
23 manipulation, and I have several of those.

24 Q. Okay. What text would have a section
25 that discusses cervical spine manipulation?

1 A. The one I just mentioned, Principles and
2 Practice of Chiropractic. The Guidelines for
3 Chiropractic Practice Parameters would have
4 information with regard to manipulation as well as
5 complications.

6 Q. Those are the Mercy Guidelines?

7 A. Yes. The Upper Cervical Spine is another
8 text that also addresses issues of manipulation of
9 the cervical spine.

10 Q. Do you know who the author is on Upper
11 Cervical Spine?

12 A. Off the top of my head I can't recall,
13 but I have it here.

14 Q. You were an editor or you were involved
15 with the Mercy Guidelines, is that correct?

16 A. Yes, I was not an editor, I was a
17 consultant.

18 Q. What was the purpose of the Mercy
19 Guidelines?

20 A. The purpose was to review the literature
21 to the point in time when these reviews were being
22 done and try and formulate what would be termed the
23 best practices document based on the current
24 evidence, the scientific evidence at the time, and
25 it addressed many, many issues with regard to

1 Chiropractic care in general.

2 Q. Do you consider the Mercy Guidelines to
3 be an accurate and reliable source of information?

4 A. For the most part, yes.

5 Q. Any other books that you've got in your
6 office on manipulation of the cervical spine?

7 A. Not that I can recall offhand, no.

8 Q. Do you subscribe to any publications?

9 A. Yes.

10 Q. Which ones do you subscribe to?

11 A. The Journal of Manipulative and
12 Physiologic Therapeutics, the Journal of the
13 Neuromusculoskeletal System, Spine Journal, The Back
14 Letter, and Bone and Joint periodical.

15 Q. Why do you subscribe to those
16 publications?

17 A. So that I can remain as current as
18 possible with the published literature.

19 Q. Do you consider those to be quality
20 publications?

21 A. Yes.

22 Q. Have you followed the local Rule in
23 Cuyahoga County and put all of your opinions in your
24 two reports?

25 MR. REGNIER: Objection. Go ahead,

1 Doctor.

2 THE WITNESS: Yes, I have.

3 BY MR. RUF:

4 Q. Are there any new materials that you've
5 reviewed since you wrote your reports?

6 A. Yes.

7 Q. And what else have you reviewed?

8 A. Reviewed the deposition transcript of
9 Charles DuVall.

10 Q. Anything else?

11 A. I don't believe so.

12 Q. Dr. Reichenbach performed an upper
13 extremity pin test on Kim Richley, is that correct?

14 A. Let me go back into his record just to be
15 sure.

16 Q. Sure, take a look at his records if you
17 need to.

18 A. What date are you referring to?

19 Q. Well, he has a note that upper extremity
20 pin and myo testing were negative C5 to T1.

21 A. Yes, that was on 10-17-02.

22 Q. What is upper extremity pin testing?
23 What's that for?

24 A. I'm not sure where you see it. I see in
25 his record pin bilateral C5 to T1 and muscle testing

1 bilateral upper extremity C5 to T1. Those are
2 neurological tests. The pin test would be to test
3 for sensation and the myo test or muscle test would
4 be to test muscle strength in the upper extremities
5 as they relate to the neurologic levels C5 to T1.

6 Q. So is the pin test to test for nerve
7 function?

8 A. To test for sensory level function of the
9 nerve, yes.

10 Q. And those were both normal?

11 A. Yes.

12 Q. What orthopedic testing did
13 Dr. Reichenbach do?

14 A. He performed range of motion and
15 provocative maneuvers. Those would involve
16 maneuvers involving compression, distraction and
17 stretching of the cervical spine.

18 Q. Okay. What do you perform foraminal
19 compression for?

20 A. That test is a provocative maneuver that
21 compresses certain structures of the cervical spine
22 in various positions to try and identify whether or
23 not that mechanism reproduces the patient's pain and
24 then depending on how the pain is reproduced we can
25 draw some conclusions from that with regard to the

1 tissue that might be involved in the production of
2 that pain.

3 Q. If the nerve at C6-7 was damaged or
4 injured would you expect the foraminal compression
5 test to be positive?

6 A. Very frequently, yes.

7 Q. And when would it not be positive if you
8 had a nerve injury at C6-7?

9 A. There are instances where depending on
10 how the nerve is injured or depending on how the
11 nerve is compressed where additional compression
12 actually doesn't cause -- an external compressive
13 load doesn't necessarily cause additional
14 compression of the nerve itself. So it's not
15 actually too uncommon for someone with a nerve root
16 lesion in the cervical spine at C6-7, C5-6, for
17 these tests to be either equivocal or negative.

18 Q. The foraminal compression test on Kim
19 Richley was negative, is that correct?

20 A. Yes.

21 Q. What is the shoulder depressor test?

22 A. That's a test where the head is tilted to
23 one side and the examiner depresses the shoulder
24 stretching, which produces a stretch effect to the
25 side of test.

1 Q. And what is that test used for?

2 A. Again, all of these tests are really just
3 to see if any of these mechanisms of motion
4 reproduces a patient's pain, the type of pain that
5 they're complaining about in particular, and then
6 depending on how the pain is produced or reproduced,
7 we can draw some conclusions from that.

8 Q. What type of underlying pathology would
9 cause a positive shoulder depression test?

10 A. A muscle injury to the trapezius or
11 levator scapulae or other muscles on one side of the
12 neck; a brachial plexus stretch type injury would --
13 that mechanism would generally reproduce that type
14 of an injury.

15 Q. What about a nerve injury at C6-7?

16 A. Again, depends on how that nerve is
17 irritated or compressed as to whether or not
18 distraction or stretching that area would actually
19 reproduce pain. It's possible it could, but in
20 other instances it does not.

21 Q. Do you agree the shoulder depresser test
22 for Kim Richley was negative?

23 A. Well, he reports it as negative, but then
24 there's a written notation indicating that there was
25 increase in muscle tension at least of the right

1 cervical and trapezius muscles.

2 Q. So how would you interpret that?

3 A. I would interpret that to suggest that
4 there was some -- there was some muscle tension at
5 the very least that the practitioner identified when
6 he performed that test on the right as compared to
7 the left.

8 Q. What's the Soto Hall test?

9 A. The Soto Hole test is performed with the
10 patient in a supine or position lying on their back
11 and the practitioner passively flexes the head on
12 toward the chest, basically flexing the cervical
13 spine passively.

14 Q. And what's the purpose of that test, what
15 are you looking for?

16 A. There again, we're looking for any soft
17 tissue response. For example, somebody who has some
18 sort of soft tissue injury or muscle spasm in the
19 back part of the neck, that test will often
20 reproduce some of that discomfort. It's also used
21 for vertebral fractures, spinous process fractures,
22 or compression fractures of the body of the
23 vertebrae; if somebody has that, that test will
24 often times reproduce pain.

25 Q. What if somebody had a facet fracture?

1 A. It certainly is possible, probable that
2 that would also reproduce pain.

3 Q. Would a nerve injury or nerve damage at
4 C6-7 produce a positive Soto Hall test?

5 A. Not necessarily. It could, but not
6 necessarily.

7 Q. You agree Kim Richley's Soto Hall test
8 was negative?

9 A. Yes.

10 Q. And these tests were all done on
11 10-17-02?

12 A. Yes.

13 Q. What's the cervical distraction test?

14 A. It's a test where the patient is
15 generally in a sitting position, could be in a
16 supine position, but generally sitting, practitioner
17 stands behind the patient or in front of the patient
18 and lifts up on the base of the skull to distract or
19 stretch the cervical spine, with --

20 Q. What are you looking for --

21 A. I'm sorry.

22 -- with the neck in an otherwise
23 neutral position.

24 Q. What are you looking for with that test?

25 A. There again, we're looking for

1 reproduction of pain. If the pain is generally
2 coming from muscles, ligaments or tendons, sometimes
3 we'll get reproduction of pain by stretching those
4 tissues. In other instances with nerve root
5 lesions, for example, if the nerve root is being
6 pinched, sometimes by distracting it basically that
7 takes the pressure off the nerve, sometimes the
8 patient will describe a decrease in the pain that
9 they're experiencing, and that also then is
10 significant for suspicion of a nerve root type
11 problem.

12 Q. Dr. Reichenbach reported that it was
13 positive on the right?

14 A. Yes. I'm sorry, the distraction --.
15 Yes, positive on the right.

16 Q. According to Dr. Reichenbach's record
17 Kimberly Richley had normal range of motion of the
18 cervical spine in all directions, is that correct?

19 A. The range of motion was normal, yes, but
20 there was some pain reproduction with those
21 movements.

22 Q. Would you agree that based upon
23 Dr. Reichenbach's record there was no evidence of a
24 nerve injury or nerve damage at C6-7?

25 A. I would say based on these findings I

1 would conclude that to be the case, yes.

2 Q. Would you agree that based upon these
3 findings Kim Richley did not have an abnormality at
4 C6-7 on 10-17-02?

5 A. You'd have to be more specific in terms
6 of what you're referring to as an abnormality.

7 Q. Well, do you think there was any type of
8 abnormality at C6-7?

9 A. I couldn't draw any conclusion with
10 regard to that based on these findings.

11 Q. Do you have any evidence of an
12 abnormality at C6-7 on 10-17-02?

13 A. No.

14 Q. I'm sorry? I didn't catch the answer.

15 A. No.

16 Q. Would you characterize Kim Richley's
17 cervical spinal on 10-17-02 as a normal cervical
18 spine?

19 A. No.

20 Q. Why not?

21 A. Because there are findings here at the
22 very least of a muscle condition of her cervical
23 spine, there's abnormal muscle tension.

24 Dr. Reichenbach also identified fixation, which is a
25 mechanical lesion, at the C5-6 level, as well as the

1 T4 through T6 level, so that that wouldn't be
2 characterized as a normal cervical spine. There are
3 mechanical problems there.

4 Q. In your practice do you perform
5 Chiropractic adjustments for the wrists?

6 A. For the wrists? Was that your question,
7 for the wrists?

8 Q. Yes.

9 A. Yes, I do.

10 Q. What type of Chiropractic adjustments do
11 you perform for a patient's wrists?

12 A. I perform primarily mobilization type
13 techniques for the wrists, but there are some
14 specific adjustments used for certain of the wrist
15 bones, and that's done -- those types of procedures
16 are performed in a high velocity/low amplitude
17 method.

18 Q. Is there any adjustment that you use on
19 the wrist for a wrist sprain/strain?

20 A. It depends on the nature of the
21 strain/sprain, mainly whether it's acute, meaning a
22 new strain or sprain, or if the patient still has
23 symptoms from a chronic strain. In an acute nature
24 generally we wouldn't do manipulation.

25 Excuse me, I'm sorry for that noise.

1 Q. That's all right. Please continue.

2 A. But for somebody who has chronic pain in
3 the wrist as a result of an old strain or an old
4 sprain, then we -- then there are manipulative
5 procedures and mobilization procedures that we
6 utilize.

7 Q. What about for a carpal tunnel syndrome,
8 do you perform manipulations for carpal tunnel
9 syndrome?

10 A. Yes.

11 Q. What type of manipulations?

12 A. The same as I just described.

13 Q. Would those manipulations be different
14 from a modified rotary break?

15 A. Well, we're talking about two totally
16 different body parts.

17 Q. Right. So that would be a completely
18 different manipulation than a modified rotary break,
19 correct?

20 A. Well, you can't even compare the two.
21 The nature of the manipulation, the high
22 velocity/low amplitude type manipulation would be
23 the same or similar as what's performed with what
24 you're describing as a rotary break type maneuver,
25 because that's typically performed in a high

1 velocity/low amplitude fashion as well, but it's in
2 a different body part so it's performed differently.

3 Q. So when you would treat either a wrist
4 sprain/strain or carpal tunnel syndrome the
5 adjustment would actually be to the wrist?

6 A. Yes.

7 Q. Do you ever perform a neck adjustment for
8 a wrist sprain/strain or carpal tunnel syndrome?

9 A. Not -- not if all they have is a wrist
10 sprain or a carpal tunnel syndrome. However, many
11 people with carpal tunnel syndrome also have what's
12 called a double crush syndrome whereby the symptoms
13 they have in their hand could be partially coming
14 from the carpal tunnel in the wrist but could also
15 be partially emanating from something more proximal,
16 even up into the neck area.

17 Q. Would you agree that the acceptable
18 standard of Chiropractic medicine requires a
19 Chiropractor only to perform manipulations that are
20 indicated for the patient's condition?

21 A. Well, that's kind of a broad question.
22 I'm not quite sure what you're referring to there.
23 But when you say condition, are you talking about
24 their symptoms at the time?

25 Q. Yes.

1 A. I would say that's not -- that's not
2 really the standard of care. There are
3 Chiropractors who will limit their treatment to a
4 patient's immediate pain areas, but the vast
5 majority of the profession tends to look at the
6 entire spine as a whole unit, as a whole organ or
7 mechanism, and even if a patient, for example,
8 presents primarily with low back pain, there are
9 many people in our profession who will evaluate the
10 entire spine, and if they find mechanical problems
11 in other parts of the spine will treat those areas
12 along with the symptomatic area.

13 Q. Well, let me ask you this. In your
14 practice do you only perform Chiropractic
15 manipulations that are indicated for a patient's
16 spine symptoms and the diagnosis you've made for the
17 patient?

18 A. I would say yes to that, but in many
19 instances that wouldn't still involve treatment in
20 areas around the primary area of complaint. The
21 treatment wouldn't necessarily be solely localized,
22 for example, if somebody came in primarily with low
23 back pain, the treatment wouldn't necessarily be
24 specifically directed to the lower back. I would
25 also assess the thoracic spine and many times even

1 the cervical spine. I would certainly assess those
2 areas, and if I find there are biomechanical
3 problems that could indirectly impact the lumbar
4 spine or the lower back problem, then we will
5 address those areas as well, even though they may
6 not be symptomatic at the time.

7 Q. But even if it's not localized you're
8 still performing manipulations that are indicated
9 for the patient's signs, symptoms, and based upon
10 the patient's diagnosis, correct?

11 A. Correct.

12 Q. And don't you agree that that's the
13 reasonable and prudent thing to do as a
14 Chiropractor?

15 A. I think that's a reasonable and prudent
16 thing to do as any practitioner.

17 Q. And you don't want to perform
18 manipulations for which there's no basis, do you?

19 A. As a broad question like that I would
20 have to say that's right.

21 Q. Wouldn't you agree that it's unacceptable
22 Chiropractic practice to perform manipulations where
23 there's no indication for performing the
24 manipulation?

25 A. I would agree with that.

1 Q. What were the treatment options for
2 Kimberly Richley on 10-17-02?

3 A. Treatment options?

4 Q. Yes.

5 A. For what?

6 Q. The treatment of her cervical spine area?

7 A. From a Chiropractic perspective or any
8 treatment options?

9 Q. Chiropractic perspective.

10 A. Treatment options would have been patient
11 could have chosen not to have any treatment at all,
12 but the treatment options would include anything
13 from muscle therapy to modalities to mobilization
14 techniques, manipulation techniques, exercise
15 therapy, various types of home therapy that we could
16 recommend for patients.

17 Q. Would you agree that Dr. Reichenbach had
18 a duty to explain the treatment options to Kimberly
19 Richley?

20 A. I'm not quite sure what you mean
21 necessarily by duty, but yes, it's generally helpful
22 for a practitioner to explain options to a patient,
23 yes.

24 Q. Well, let me reword it then. Would the
25 acceptable standard of Chiropractic practice require

1 Dr. Reichenbach to explain the potential treatment
2 options for Kimberly Richley's cervical spine?

3 A. Well, I'm not quite sure -- I'm not sure
4 really what you're getting at there. I think it was
5 explained to the patient, but yes, it's helpful to
6 -- it's always helpful to have a consult with a
7 patient after they get examined and explain what
8 your recommendations might be therapeutically.

9 Q. Well, don't you think a patient has the
10 right to know the potential treatment for their
11 condition?

12 A. Again, I'd have to ask are you referring
13 to just the Chiropractic treatments or any other
14 options that might be available.

15 Q. Well, any treatments. Don't you agree
16 it's up to the patient to decide what treatment they
17 want?

18 A. I think it's definitely the patient's
19 choice to choose to accept treatment, yes.

20 Q. And a patient cannot make an intelligent
21 decision unless they're informed by the Chiropractor
22 of the potential treatment options?

23 A. That's true.

24 Q. What is your understanding of what must
25 be explained in order to obtain informed consent

1 from a patient before performing a cervical
2 manipulation?

3 A. I think it depends on the circumstance,
4 the patient's basic knowledge of Chiropractic
5 treatment generally, and any perceived risks
6 involved with any procedures that are, you know,
7 going to be recommended.

8 Q. Do you think that the Chiropractor should
9 also explain whether or not a treatment is effective
10 or has been proven effective?

11 A. You're asking really broad questions.
12 These are not generally, you know, specific issues
13 that would come up clinically. So I would say that
14 that's just not a practical -- the way you're asking
15 the question is not something that is practical in a
16 clinical setting.

17 Q. Well, do you think if there's no proven
18 effectiveness for a treatment that that should be
19 explained to a patient?

20 A. What do you mean by proven effectiveness?

21 Q. Well, if there's no studies or medical
22 literature proving that a treatment is effective, do
23 you think that should be explained to a patient?

24 A. I think that would be reasonable to
25 explain, but in most instances, both in medicine and

1 Chiropractic, if the treatment is a common practice,
2 something that's performed on a regular basis that's
3 routine for the type of practitioner the patient is
4 seeing, it's generally not disclosed in that nature.

5 Q. Would you agree that in order to obtain
6 informed consent not only do you have to obtain
7 consent to perform a procedure but the patient also
8 must be informed before making the decision?

9 MR. REGNIER: Objection. Go ahead,
10 Doctor.

11 THE WITNESS: Informed of what?

12 BY MR. RUF:

13 Q. Informed of the treatment options and the
14 potential risks and benefits of treatment.

15 A. I think that is -- depends on the type of
16 treatment that's going to be applied, but in general
17 I would say that's the prudent thing to do.

18 But in many instances from a clinical
19 perspective, depending on the method of treatment
20 that's being recommended, having an understanding of
21 what the patient's understanding is of that
22 treatment before it's even applied would determine
23 the extent of any discussion that's held with the
24 patient with regard to alternatives and risks and
25 the procedures themselves.

1 Q. Have you been practicing Chiropractic
2 medicine for twenty-eight years?

3 A. Yes.

4 Q. During that twenty-eight years have you
5 ever treated a facet fracture --

6 A. No.

7 Q. -- of the cervical spine?

8 A. No.

9 Q. I'm sorry, you said no?

10 A. No.

11 Q. Have you ever diagnosed a facet fracture
12 of the cervical spine?

13 A. Not that I recall. I have diagnosed
14 pillar fractures, what are termed pillar fractures,
15 which is an area just below the facet, but I don't
16 recall if I've ever diagnosed a facet fracture.

17 Q. Have you ever diagnosed a subluxation of
18 the cervical spine?

19 A. Can you define subluxation?

20 Q. Well, is it your understanding that
21 subluxation and dislocation are the same thing or
22 are they different?

23 A. They're different.

24 Q. How are they different?

25 A. Technically a subluxation is less than a

1 dislocation. It's an incomplete dislocation.

2 Q. Would a subluxation be where one vertebra
3 slips over the top of another vertebra?

4 A. It depends on the extent. If it's not
5 fully dislocated and there is shifting or measurable
6 movement one vertebrae to the next, then that would
7 be a subluxation.

8 Q. Okay. Then how would you define
9 subluxation?

10 A. That is how I would define subluxation,
11 from a purely radiographic or medical perspective.

12 We use the term subluxation in
13 Chiropractic in a different fashion, as well, an
14 entirely different -- it's an entirely different
15 context when we use the term from a biomechanical
16 standpoint, but we also use the term subluxation as
17 it's used conventionally from a medical and
18 radiographic perspective.

19 Q. Have you ever diagnosed a subluxation?

20 A. Yes.

21 Q. How many times have you done that?

22 A. All the time.

23 Q. How many times in your career have you
24 diagnosed a subluxation?

25 A. I couldn't give you a number. Many, many

1 times.

2 Q. Could you give me an estimate?

3 A. Hundreds. The term subluxation from a
4 Chiropractic -- from a purely mechanical perspective
5 I diagnose on almost every patient that comes to me
6 with some sort of complaint.

7 The term subluxation from a
8 medical/radiographic perspective, the definition of
9 incomplete dislocation I also diagnose on many
10 occasions when there is vertebral shifting and we
11 can identify that radiographically.

12 Q. Okay. Then let me clarify the question.
13 How many times have you diagnosed subluxation based
14 upon a medical/radiographic definition?

15 A. Probably hundreds.

16 Q. Have you treated hundreds of patients
17 with a subluxation from the medical/radiographic
18 definition?

19 A. Yes. That would be not just related to
20 the cervical spine but the lumbar spine, as well.

21 Q. Would you agree that it's common with a
22 facet fracture to see subluxation?

23 A. Is it common?

24 Q. Yes.

25 A. That can occur and frequently does occur.

1 Q. Is one of the functions of the facet to
2 keep the vertebral bodies in place?

3 A. That's one of the functions, yes.

4 Q. So if you have a facet fracture, that can
5 cause a subluxation?

6 A. It can, yes.

7 Q. Have you ever diagnosed a fracture of the
8 transverse process?

9 A. I've identified transverse process
10 fractures, yes, mostly in the lumbar spine. I can't
11 recall if I've ever diagnosed one in the cervical
12 spine.

13 Q. Have you ever been sued for malpractice?

14 MR. REGNIER: Objection. Go ahead,
15 Doctor.

16 THE WITNESS: No.

17 BY MR. RUF:

18 Q. Who is your insurance company?

19 MR. REGNIER: Objection. Go ahead,
20 Doctor.

21 THE WITNESS: National Chiropractic
22 Mutual Insurance Company.

23 BY MR. RUF:

24 Q. So you have the same insurance company as
25 Dr. Reichenbach, correct?

1 MR. REGNIER: Objection. Go ahead,
2 Doctor.

3 THE WITNESS: Yes.

4 BY MR. RUF:

5 Q. Have you seen an increase in premiums
6 over the years?

7 MR. REGNIER: Can I just have a
8 continuing line of objections to insurance
9 questions, Mark?

10 MR. RUF: Sure, that's fine.

11 MR. REGNIER: Go ahead, Doctor.

12 THE WITNESS: No. I've actually seen
13 a decrease in premiums frequently.

14 BY MR. RUF:

15 Q. Would you agree that you have an interest
16 in seeing that your premiums do not go up?

17 A. I certainly wouldn't -- don't like to see
18 them go up.

19 Q. Do you agree that Dr. Reichenbach
20 performed a modified rotary break on Kim Richley?

21 A. On what date?

22 Q. Did he perform a modified rotary break on
23 three dates on Kim Richley?

24 A. Yes.

25 Q. What were those three dates?

1 A. 10-18-02, 10-19 and 10-21-02.

2 Q. Have you ever performed a modified rotary
3 break?

4 A. Yes, I perform that regularly.

5 Q. How many times in your career have you
6 done that?

7 A. Tens of thousands.

8 Q. I'm sorry, you said tens of thousands?

9 A. Yes.

10 Q. Have you ever had a complication from
11 performing a modified rotary break?

12 A. No.

13 Q. What are the risks of performing a
14 modified rotary break?

15 A. Any potential risk?

16 Q. Yes.

17 A. There's always a risk of soreness
18 occurring, at least initially, for someone who has
19 not had the procedure done before or depending on
20 the acute characteristics of their condition, but
21 other potential risks are --. Well, actually I
22 don't know of any other really significant potential
23 risks of performing that procedure. Again, it
24 depends on the nature of the patient's condition at
25 the time.

1 Q. Is a stroke a potential risk?

2 A. A stroke is a potential risk, a very low
3 risk, but a potential risk.

4 Q. Is subluxation a potential risk?

5 A. In the absence of any underlying
6 condition it's not a risk. If there is some other
7 kind of underlying bone condition or other disease
8 process related to the cervical spine, then that
9 might be a risk.

10 Q. Are you aware of whether there are any
11 reports in the literature of subluxation being a
12 complication from a modified rotary break?

13 A. No, I'm not.

14 Q. Is a modified rotary break a high
15 velocity manipulation?

16 A. It's typically a high velocity/low
17 amplitude type manipulation, yes, although it can be
18 performed in a variety of ways. The high
19 velocity/low amplitude method is the most common;
20 however, it can be applied in simply an oscillatory
21 manner or simply in a mobilization type method.

22 Q. Can you describe the proper technique for
23 performing a modified rotary break?

24 A. Generally the procedure is performed
25 either in a sitting or supine position, which means

1 laying on their -- a patient laying on their back,
2 and the provider stands behind the patient, with two
3 hands stabilizes the head and neck, introduces
4 distraction, mild flexion and mild lateral flexion
5 positioning to the neck into the specific area of
6 the spine that -- where the adjustment or
7 manipulation is intended to take place, and if the
8 high velocity method is completed, then a very
9 controlled low amplitude, which means low depth,
10 impulse is imparted into that section of the
11 cervical spine.

12 Q. Would you agree that the acceptable
13 standard of Chiropractic practice requires a
14 Chiropractor to perform a cervical modified rotary
15 break with proper technique?

16 A. Would you repeat that question, please?

17 MR. RUF: Sure. I'd ask the Court
18 Reporter to read it back.

19 (The Reporter read the following:)

20 "Q. Would you agree that the
21 acceptable standard of Chiropractic practice
22 requires a Chiropractor to perform a cervical
23 modified rotary break with proper technique?"

24 THE WITNESS: Certainly.

25 BY MR. RUF:

1 Q. Would performing a modified rotary break
2 in the standing position be improper technique?

3 A. Performing that procedure in a standing
4 position isn't even a technique. It's not a
5 technique taught in any Chiropractic institution I'm
6 aware of, I've never seen it performed by anybody in
7 technique classes, I've never even saw it discussed
8 by anybody or any colleagues of mine that I
9 discussed these issues with.

10 Q. Okay. So would you agree that performing
11 a modified rotary break in a standing position would
12 be improper technique?

13 A. I would -- I don't know that I'd say it's
14 improper technique. I would say it's not a
15 practical, and it would be very difficult to
16 perform.

17 Q. Well, if you've never heard of it in your
18 career do you agree it's not proper technique to
19 perform a modified rotary break in a standing
20 position?

21 A. I would agree with that.

22 Q. If a Chiropractor performs a modified
23 rotary break using rotational force, would that be
24 improper technique?

25 A. No, not necessarily. There's often some

1 degree of rotation that is also imparted when
2 performing these procedures. It's generally
3 minimal, but there's always some rotation. I'm
4 sorry, not necessarily always, but oftentimes
5 there's rotation that's imparted into the movement
6 that's required to perform the procedure.

7 Q. Would you agree that it would be improper
8 technique to perform a modified rotary break on a
9 cervical spine that exerts a significant amount of
10 rotational force on the cervical spine?

11 A. You would have to define significant.

12 Q. Would you agree that it would be improper
13 technique to perform a modified rotary break on the
14 cervical spine which produces enough rotational
15 force on the cervical spine to cause injury?

16 A. Certainly.

17 Q. Would you agree that if a Chiropractor
18 performed a modified rotary break on the cervical
19 spine which exerted enough force to cause injury to
20 the cervical spine, that would be a deviation from
21 acceptable Chiropractic practice?

22 A. Again, it would depend on the
23 circumstances. When you say injury to the cervical
24 spine, you would have to identify scenarios. There
25 might be situations where injury could occur but it

1 couldn't be foreseen, even with a normal or what
2 would be a customary amount of movement and force
3 imparted with the procedure.

4 If there's some underlying condition
5 that a patient might have that couldn't be foreseen
6 and even a customary type of manipulation exerted
7 enough force to cause damage, then I wouldn't say
8 that would be a deviation from the standard of care,
9 but in a normal spine, a normal healthy spine, for a
10 manipulation to cause injury or a fracture, then
11 excessive force would have to be imparted, yes.

12 Q. Would you agree that the acceptable
13 standard of Chiropractic practice requires a
14 Chiropractor to determine if there are
15 contraindications to performing a modified rotary
16 break on the cervical spine?

17 A. We certainly always try and assess for
18 contraindications, yes.

19 Q. Do you agree that a facet fracture would
20 be a contraindication to performing a modified
21 rotary break on the cervical spine?

22 A. If someone had a facet fracture, then
23 that would be a contraindication to manipulation,
24 yes.

25 Q. Would you agree that if somebody had a

1 healed facet fracture, that would be a
2 contraindication to performing a manipulation on the
3 cervical spine?

4 A. No, I would not agree with that.

5 Q. Why wouldn't you agree with that?

6 A. Well, if the fracture were healed, there
7 would be no -- there would be no condition there,
8 the fracture is healed, there's no more fracture, so
9 that would be not be a contraindication to
10 manipulation.

11 Q. Based upon your experience if a fracture
12 is healed is the condition of that bone weaker than
13 if there never was a fracture?

14 A. No, it's stronger.

15 Q. Would you agree that if a modified rotary
16 break is performed with proper technique it should
17 not result in injury to a patient's cervical spine?

18 A. If a patient has a normal or relatively
19 normal healthy cervical spine, then yes, I would
20 agree with that.

21 Q. So would you agree hypothetically that if
22 a Chiropractor performed a modified rotary break and
23 caused a fracture in the patient's cervical spine,
24 that would be a deviation from acceptable
25 Chiropractic practice?

1 MR. REGNIER: Objection. Go ahead,
2 Doctor.

3 THE WITNESS: If that particular
4 cervical spine were a healthy cervical spine where
5 there were no bone weakening diseases or other
6 conditions that would weaken bone, that would
7 normally fail under a fairly normal loads, then yes,
8 I would say that would be a deviation from the
9 standard of care.

10 BY MR. RUF:

11 Q. Did Kim Richley have any condition which
12 would cause bone weakening?

13 A. Not that is in the record, no.

14 Q. What are the indications for performing a
15 modified rotary break? What kind of conditions do
16 you perform a modified rotary break for?

17 A. Many different types of cervical spine
18 conditions, anything from mild strains to muscle
19 spasm, people with chronic -- even acute or chronic
20 neck pain for a variety of reasons, people with
21 spondylosis, which is a degenerative condition that
22 develops in some people over time, degenerative disk
23 disease conditions we use the procedure, and even
24 oftentimes for people with bulging and herniated
25 disks the procedure can be utilized.

1 Q. What are you trying to accomplish in
2 performing a modified rotary break of the cervical
3 spine?

4 A. The same thing we try and accomplish with
5 any spinal adjustment that we perform anywhere. The
6 objective of an adjustment is to restore motion into
7 a motor unit or two individual vertebra where motion
8 has been lost, and oftentimes motion is lost in
9 these vertebrae as a result of muscle imbalance, as
10 a result of new or old injuries where scar tissue
11 starts to form around the joints restricting the
12 normal movement patterns of the joint.

13 It's a consequence almost invariably
14 of degenerative changes to the vertebrae, the disks
15 or the facet joints, and so the objective would be
16 in those people that have pain syndromes from that
17 or who simply have functional disturbances from
18 that, the objective with the manipulation is to
19 restore those normal movement patterns, and that
20 generally then is a method of relieving pain.

21 Q. When you perform a modified rotary break
22 do the bones in the cervical spine move?

23 A. Well, they can move to a minimal degree.

24 Q. Okay. And how are they moving?

25 A. I can't answer that question. It's just

1 too broad.

2 Q. In performing a modified rotary break of
3 the cervical spine would there be any movement at
4 C6-C7 if the technique is performed properly?

5 A. There can be.

6 Q. And what movement would you expect to see
7 if it does occur?

8 A. Well, the movement would be normal
9 movement between the vertebrae. We're taking the
10 vertebrae into positions that are normal for those
11 vertebrae to be moved into.

12 So in terms of what movements can
13 occur, usually as I mentioned earlier with a
14 cervical spine adjustment there are some distractive
15 forces, which means a stretching or traction type
16 force is imparted to the neck; there's usually some
17 degree of flexion, some degree of lateral bending;
18 and there could be an element of rotation.

19 Q. So in performing proper technique, the
20 cervical spine should only move within its normal
21 range of motion, is that correct?

22 A. Well, when we are setting a patient up
23 for the adjustment the joint is moved into a normal
24 range of motion.

25 When the impulse is created, the high

1 velocity/low amplitude impulse is created, it moves
2 the joint into what's called the paraphysiological
3 space. It's slightly beyond what would be termed
4 the active range of motion, which is the range of
5 motion that the patient can actually move
6 voluntarily, into a more passive range of motion,
7 but without exceeding the anatomic limits of
8 movement.

9 Q. Would you agree that if you exceed the
10 anatomic limits of movement, that could cause injury
11 to a patient?

12 A. Yes.

13 Q. I'm sorry, did you give an answer?

14 A. Yes, I said yes.

15 Q. Oh, okay. Thanks. I missed that.

16 When you refer to a high velocity/low
17 impulse manipulation, what do you mean by that?

18 A. High velocity/low amplitude, high
19 velocity means it's done quickly; low amplitude
20 means very low depth of thrust or impulse, it's a
21 controlled amount of depth.

22 Q. Why do you want low depth?

23 A. Because if the depth isn't controlled,
24 then it is possible to exceed the anatomic limits of
25 motion.

1 Q. And if you exceed the anatomic limits of
2 motion, could a fracture occur?

3 A. A fracture could possibly occur. It's
4 much more likely that there would be soft tissue
5 injury, overstretching of ligaments or tendons.

6 Q. Are you aware of any degenerative changes
7 in Kim Richley's cervical spine on 10-17-02 or
8 before?

9 A. Just give me one minute.

10 Yes.

11 Q. And what degenerative changes?

12 A. There were degenerative changes at C5-6
13 and C6-7.

14 Q. And what were those degenerative changes?

15 A. There was evidence of bone spurring at
16 the posterior parts of the bodies of the vertebrae
17 at both levels, and that is degeneration.

18 Q. Would you agree that her cervical spine
19 films of 1-29-99 at Parma Community Hospital showed
20 no evidence of fracture in the cervical spine?

21 A. Yes, I would agree.

22 Q. Would you agree that her cervical spine
23 films of 1-29-99 showed no abnormality in the
24 cervical spine?

25 A. If you can hold on a second, I'm not sure

1 if I personally reviewed those films.

2 No, I did not personally review those
3 films, so I can only go based on the report that I
4 read, and the report simply indicates that there was
5 no fracture or dislocation.

6 Q. And no degenerative changes were
7 reported, correct?

8 A. I'd have to look at the report again. I
9 don't have that identified in my report, but that I
10 don't recall, whether they identified that or not.

11 Q. Do you have that available?

12 A. I'm sure I do.

13 Q. Have you been able to locate it?

14 MR. REGNIER: He's looking, Mark.

15 THE WITNESS: Yes, I have an X-ray
16 report of 1-21-99.

17 That may be a typo in my report. I
18 had it listed as 1-29-99, but I see one of 1-21-99.

19 BY MR. RUF:

20 Q. Would you agree that based upon that
21 report there was normal alignment and curvature, no
22 fracture or dislocations seen, no degenerative
23 changes were seen?

24 A. Yes, that's what it says.

25 Q. Would you agree that the impression would

1 be a normal cervical spine?

2 A. Yes.

3 Q. Let's go to 10-17-02. Have you reviewed
4 that film, the film that was taken at
5 Dr. Reichenbach's office?

6 A. Yes.

7 Q. Would you agree there's no evidence of
8 fracture in the film of 10-17-02?

9 A. Yes.

10 Q. Would you agree there's no evidence of
11 subluxation in the film of 10-17-02?

12 A. Yes.

13 Q. Would your interpretation of the film of
14 10-17-02 be normal cervical spine?

15 A. No.

16 Did you hear that?

17 Q. No, I didn't, I'm sorry.

18 A. No, I said no. As indicated earlier,
19 when I reviewed those films there was evidence at
20 that time of degenerative changes at C5-6 and C6-7.

21 Q. Did you notice any other abnormalities on
22 the film of 10-17-02?

23 A. Just a flattening of the normal cervical
24 lordosis which oftentimes is a normal event when
25 the -- when the mid to lower cervical vertebrae

1 start to go through degenerative changes.

2 Q. Would you agree that there was no
3 abnormality shown at C6-7 on the film of 10-17-02,
4 other than degenerative changes?

5 A. Yes.

6 Q. Would you agree that Kimberly Richley's
7 facet fracture occurred either on 10-17-02 or 10 --.
8 I'm sorry. Strike that.

9 Would you agree that Kimberly
10 Richley's facet fracture occurred either on 10-21-02
11 on 10-22-02?

12 A. I would agree that the separation
13 occurred sometime within that time frame, yes. I'm
14 not sure when the fracture actually occurred.

15 Q. Do you have an opinion based upon
16 reasonable medical probability as to when Kimberly
17 Richley's facet fracture occurred?

18 A. I do not. I have scenarios,
19 possibilities, that I think are reasonable to
20 presume, but based on all the records thus far we
21 don't really know exactly when an actual fracture
22 may have occurred.

23 Q. And those scenarios that you've come up
24 with are just possibilities, correct?

25 A. Yes.

1 Q. Would you agree that there is no medical
2 evidence that Kimberly Richley had a facet fracture
3 at C6-7 before 10-17-02?

4 MR. REGNIER: Objection. Go ahead,
5 Doctor.

6 THE WITNESS: There's no radiographic
7 evidence of it, but her history indicates a number
8 of falls that she had, at least one of which
9 certainly could have caused a fracture of that
10 nature.

11 BY MR. RUF:

12 Q. But none of the films before 10-17-02 or
13 on 10-17-02 showed a facet fracture, correct?

14 MR. REGNIER: Objection. Go ahead,
15 Doctor.

16 THE WITNESS: That's correct, but if
17 a fracture did occur, it would be called an occult
18 fracture; often times that will heal with a
19 non-union effect which would not show up on
20 conventional plain film X-rays.

21 BY MR. RUF:

22 Q. You've reviewed Kim Richley's medical
23 records, correct?

24 MR. REGNIER: Objection, to the
25 extent they've been produced. Go ahead, Doctor.

1 THE WITNESS: Yes, to the records
2 that I've identified that I reviewed, yes.

3 BY MR. RUF:

4 Q. And based upon your review of those
5 medical records, is there any mention in any of the
6 records of a facet fracture at C6-7 before 10-17-02?

7 A. No.

8 Q. In your opinion did Dr. Reichenbach take
9 a thorough history?

10 A. Yes, I thought his history was certainly
11 adequate for the condition described.

12 Q. Do you think that the acceptable standard
13 of Chiropractic practice requires a Chiropractor to
14 take a thorough history?

15 A. I believe that the accepted standard of
16 care is to take an adequate history. When you use
17 the word thorough, that could mean anything.
18 There's no such thing as a complete history or
19 complete physical examination. It's important to
20 gather the information necessary to assess the
21 condition a patient has and then make
22 recommendations from there.

23 Q. Would you agree that based upon his
24 history there was no history of a neck fracture
25 before 10-17-02?

1 A. There was no history of a neck fracture,
2 but there -- he did indicate that she had had a
3 history of many falls.

4 Q. Would you agree that based upon all the
5 medical records you've reviewed none of the records
6 mentions a history of a facet fracture before
7 10-17-02?

8 A. That's true.

9 MR. REGNIER: Objection. Go ahead.

10 BY MR. RUF:

11 Q. I'm sorry, did you give an answer?

12 A. I said that's true.

13 Q. What are the signs or symptoms of a facet
14 fracture at C6-7?

15 A. A spontaneous facet fracture, an acute
16 facet fracture?

17 Q. An acute facet fracture.

18 A. Well, the symptoms would certainly be
19 significant pain in the area, at least initially;
20 the character of the pain might change over a period
21 of, you know, twenty-four to seventy-two hours or
22 so, within that time frame the character of the
23 symptoms could change; and the symptoms -- usually
24 when a fracture occurs the feeling of a fracture to
25 an individual where the fracture occurs is sort of a

1 dull, sort of a sickening, nauseating type
2 sensation.

3 Q. Like a toothache type sensation?

4 A. Excuse me?

5 Q. Like a toothache type sensation?

6 A. No, not when it first occurs. When it
7 first occurs it would be -- it would be -- a feel --
8 a significant feeling of pain and a feeling that
9 something was, you know, something significant was
10 done.

11 Q. What about after the passage of some
12 time?

13 A. After the passage of time then it could
14 transform into either a toothache type pain or if
15 it's strictly pain from the fracture and not due to
16 injury or an effect to any other surrounding tissue,
17 then usually it is localized pain, an aching type,
18 deep aching type pain that may spread to some
19 immediate surrounding areas.

20 Q. And do you agree that based upon the
21 medical records you've reviewed there were no signs
22 or symptoms of a facet fracture before 10-17-02 in
23 Kim Richley?

24 MR. REGNIER: Objection. Asked and
25 answered. Go ahead.

1 THE WITNESS: I would agree with
2 that.

3 BY MR. RUF:

4 Q. Doctor, would you agree that a facet
5 fracture is very painful?

6 A. I would agree that it would be very
7 painful, yes.

8 Q. And would you agree that a person who had
9 sustained a facet fracture would probably have to go
10 for medical treatment due to the pain?

11 A. Generally, yes.

12 Q. What was Dr. Reichenbach's diagnosis of
13 Kimberly Richley's neck?

14 MR. REGNIER: On what date?

15 MR. RUF: I'm sorry?

16 MR. REGNIER: On what date?

17 MR. RUF: On 10-17-02.

18 THE WITNESS: The diagnosis he has
19 listed on the diagnosis sheet are cervical thoracic
20 segmental dysfunction.

21 BY MR. RUF:

22 Q. And what would your diagnosis be for Kim
23 Richley?

24 A. It would have been similar to that. I
25 may have included other diagnoses that were possible

1 based upon her symptoms and the physical signs.
2 Cervical brachial syndrome is a potential diagnosis
3 that could be utilized. But in this situation there
4 was really no definitive diagnosis from an acute
5 standpoint.

6 You couldn't diagnose it as a strain
7 or a sprain because there was really no significant
8 evidence or at least by the history that this was an
9 acute condition. The history indicates that it was
10 an ongoing, more of a chronic problem, and the
11 physical findings are consistent with his diagnosis.

12 Q. And what was her prognosis on 10-17-02?

13 A. In terms of her neck problem?

14 Q. Yes.

15 A. Are you asking me based on review of the
16 records or --

17 Q. Based upon your review of the records
18 what was her prognosis on 10-17-02?

19 A. I think based on the symptoms she
20 described and the physical findings that
21 Dr. Reichenbach identified that she was a definite
22 candidate for manipulative therapy and that that
23 type of patient with those types of complaints and
24 physical findings generally respond very favorably
25 to manipulative therapy.

1 Q. So her prognosis was favorable?

2 A. Yes.

3 Q. She had no condition on 10-17-02 that
4 affected her ability to work, correct?

5 MR. REGNIER: Objection. Is that
6 what you're representing?

7 MR. RUF: I'm asking the Doctor.

8 BY MR. RUF:

9 Q. Do you agree that she didn't have any
10 condition on 10-17-02 that affected her ability to
11 work?

12 MR. REGNIER: Objection. Inaccurate
13 recitation of the record.

14 BY MR. RUF:

15 Q. Go ahead, answer, Doctor.

16 A. Are you --. With regard to her cervical
17 spine complaints or any of her complaints?

18 Q. Then let's limit it to the cervical
19 spine. Do you agree that she did not have any
20 condition of her cervical spine on 10-17-02 that
21 would affect her ability to work?

22 MR. REGNIER: Objection. Go ahead,
23 Doctor.

24 THE WITNESS: I guess that depends on
25 the type of work, but I would say generally no.

1 BY MR. RUF:

2 Q. Would you agree that on 10-17-02 she did
3 not have any condition of her cervical spine that
4 would affect her ability to lift weight?

5 MR. REGNIER: Objection. Go ahead,
6 Doctor.

7 THE WITNESS: You'd have to qualify
8 the weight, but I would say to conduct normal
9 activities of daily living, she was capable of doing
10 that.

11 BY MR. RUF:

12 Q. Would you agree there was no condition of
13 her cervical spine on 10-17-02 that would affect her
14 ability to look up and down repetitively?

15 A. I would say she would have been able to
16 do that. She may have had discomfort with it, but
17 she would have been able to do it.

18 Q. And do you agree there was no condition
19 of her cervical spine that would affect her ability
20 to sit for long periods of time?

21 MR. REGNIER: Objection. Go ahead.

22 THE WITNESS: Based on the record I
23 would say she probably should -- would have been
24 able to sit for prolonged periods.

25 BY MR. RUF:

1 Q. Would you agree that it's more probable
2 than not that Kimberly Richley's facet fracture
3 occurred following the Chiropractic manipulation on
4 10-21-02?

5 A. It's very difficult to answer that
6 question. There's no way really of knowing. I
7 would say there's reasonable probability that it
8 occurred some time following her visit with
9 Dr. Reichenbach.

10 Q. Are you aware of any trauma to Kimberly
11 Richley's cervical spine between 10-21 and 10-22-02,
12 other than the Chiropractic manipulation?

13 MR. REGNIER: Objection. Go ahead,
14 Doctor.

15 THE WITNESS: Well, I don't know that
16 there was any trauma from the Chiropractic
17 manipulation, and there's no record of any specific
18 incident or event during that time period from the
19 time she saw Dr. Reichenbach until the following
20 morning when she awoke with symptoms.

21 The only thing I do know is that she
22 has a seizure disorder and there is reasonable
23 probability that something happened through the
24 night, a seizure could have produced this kind of
25 event; other than that, no, there's nothing else

1 that's disclosed.

2 BY MR. RUF:

3 Q. Are you aware of any medical literature
4 that documents a facet fracture as the result of a
5 seizure?

6 A. I do know fractures occur as a result of
7 seizures, yes.

8 Q. I'm asking you are you aware of any
9 specific medical literature that documents a facet
10 fracture as a result of a seizure?

11 A. I couldn't give you any specific
12 publication or text as I sit here, but I certainly
13 do know that I've read information with regard to
14 that in the past that seizures can cause significant
15 spasm, muscle spasm, that could be intense enough to
16 cause fracture.

17 Q. If you wanted to look for articles on
18 facet fracture would using PubMed be a reasonable
19 place to look?

20 A. Using what?

21 Q. PubMed or Medline?

22 A. Well, those are -- sure, those are
23 sources for references for many medical conditions,
24 yes.

25 Q. So if you were looking for documented

1 medical articles where there was a facet fracture
2 from a seizure, PubMed or Medline would be a
3 reasonable place to look?

4 A. I suppose it would be.

5 Q. And if there were articles out there,
6 would you expect a search in Medline or PubMed to
7 produce articles?

8 A. I would have no idea whether there are
9 any articles that specifically address that issue.

10 Q. Are you aware of any Chiropractic or
11 medical textbook that documents a facet fracture as
12 a result of a seizure?

13 A. Not that I can recite to you at this
14 point.

15 Q. Do you have any evidence that Kimberly
16 Richly sustained a seizure on 10-21 or 10-22-02?

17 A. No.

18 Q. Do you know whether or not Kimberly
19 Richley was being treated for epilepsy?

20 A. I don't know if she was actually under
21 treatment at the time. Based on the medication she
22 was taking, I don't believe she was on medication
23 for a seizure disorder, although the Neurontin she
24 was taking possibly could have been for her seizure
25 disorder. I'm not really sure what the purpose of

1 the Neurontin was at the time, if it was for her
2 chronic low back problem or for the epilepsy.

3 Q. So you don't know if she was on
4 medication to control her seizures?

5 A. The Neurontin is an anti-seizure
6 medication.

7 Q. Do you know how often Kimberly Richley
8 had seizures in 2002?

9 A. No.

10 Q. Do you know the type of seizures she
11 would have if she had a seizure?

12 A. I'm sorry, I don't -- I don't understand
13 that question.

14 Q. Well, do you know what would happen with
15 her body and her head if she had a seizure, can you
16 describe for me what would happen?

17 A. If she had a Grand Mal seizure, it's
18 fairly severe, significant spasms that occur,
19 uncontrolled spasms, that can in fact hyperextend
20 the neck and, you know, in a very forceful, violent
21 fashion can cause tremors that can cause the body to
22 move about and position themselves in ways that
23 could be very dangerous for them. So that type of
24 seizure is generally rather violent.

25 Q. Do you know if she had Grand Mal

1 seizures?

2 A. I don't know.

3 Q. You don't know the types of seizures she
4 had?

5 A. No.

6 Q. You don't know whether if she had a
7 seizure it exerted any kind of force on her neck, do
8 you?

9 A. I wouldn't know that, no.

10 Q. Doctor, would you agree that Kimberly
11 Richley's facet fracture extended to the transverse
12 process?

13 A. Yes.

14 Q. Would you agree that it was a continuous
15 fracture between the facet and the transverse
16 process?

17 A. That's what the imaging studies implied,
18 yes.

19 Q. So would you agree that it's more
20 probable than not that the fracture started at the
21 facet and continued over to the transverse process?

22 A. That seemed reasonable to me, yes.

23 Q. How many times have you been an expert in
24 Chiropractic malpractice cases or medical
25 malpractice cases?

1 A. How many times have I testified?

2 Q. How many times have you been an expert?

3 A. I don't know. I can't tell you the
4 number. I don't know.

5 Q. Can you give me an estimate?

6 Well, why don't we start this way.
7 How long have you been doing medical legal reviews?

8 A. For about fifteen years.

9 Q. And approximately how many cases have you
10 done per year over those fifteen years?

11 A. Probably maybe five a year. That I've
12 reviewed, not testified in.

13 Q. So around seventy-five cases or so would
14 be a good approximation?

15 A. Probably.

16 Q. Have any of those cases involved a facet
17 fracture?

18 A. No.

19 Q. Have any of them involved any type of
20 cervical fracture?

21 A. Yes.

22 Q. What type of cervical fracture?

23 A. I've reviewed claims, one I know of,
24 there may have been two, for an odontoid fracture,
25 or what's called a os odontoidium. That's of the

1 second cervical vertebra.

2 Q. And what was the claim being made in that
3 case? Was it due to the Chiropractic manipulation?

4 A. The --. Yeh, I'm sure that that was part
5 of the claim. I really don't remember exactly what
6 the claim was at the time -- or currently, but that
7 was most likely part of the claim, which is probably
8 why I was asked to review it.

9 Q. What was your opinion? Did you conclude
10 that the fracture was due to the Chiropractic
11 manipulation?

12 A. The only one I recall was a case with
13 this os odontoidium, which is a -- another case of
14 non-union basically of this odontoid process as it
15 normally --. Normally it's osseously or firmly
16 attached to the body of the second cervical
17 vertebra. There are some people who have congenital
18 non-unions of these processes where -- meaning
19 they're born with -- where it is separated and it
20 never fully forms or unionizes with the main part of
21 the vertebra, and then with certain types of
22 movements it could become dislodged, but even that
23 usually requires significant force.

24 Q. So was your opinion that this was caused
25 by the manipulation or not?

1 A. I really don't recall. I believe my
2 opinion was that it was not caused by the
3 manipulation, but I believe there were very
4 significant other circumstances that were identified
5 that could have caused the separation.

6 Q. How many times have you been an expert in
7 a case where it is alleged that any type of fracture
8 was caused by a Chiropractor?

9 A. Four or five times perhaps.

10 Q. Have you ever concluded that the fracture
11 was caused by the Chiropractic manipulation?

12 A. There was one case involving the lumbar
13 spine and pelvis where I made that conclusion, yes.

14 Q. What type of fracture was it?

15 A. It was a hip fracture, actually a femoral
16 neck fracture.

17 Q. And what type of manipulation was used?

18 A. It was a lumbar spine called a side
19 posture type manipulation and it was on an elderly
20 individual, someone who, you know, definitely was
21 osteoporotic, had bone weakening disease.

22 Q. Was it your opinion that the standard of
23 care was met or was not met?

24 A. I don't really recall.

25 Q. Why did you conclude that the

1 manipulation caused the fracture?

2 A. Based on the --. I really don't recall
3 all the details of this, this is just kind of, you
4 know, just from remote memory, but I believe it was
5 just because of all the other circumstances
6 surrounding the case, and the onset of pain, the
7 medical records subsequent to the treatment that was
8 provided, but again, I really don't recall all the
9 details of the case.

10 Q. Were you the Plaintiff's expert or
11 defense expert?

12 A. I believe -- I was not the Plaintiff's
13 expert. I believe I was asked to review the case as
14 a defense expert and I do not believe that I was,
15 you know, that -- I don't believe I was retained.

16 Q. I'm not sure I asked this question. Have
17 you ever been an expert on a case involving any type
18 of neck fracture, other than the odontoid process?

19 A. Not that I recall, no.

20 Q. Would you agree that Chiropractic
21 manipulations are capable of fracturing bones in the
22 human body if they're performed improperly?

23 A. Well, if a manipulation is performed
24 improperly or too aggressively on the right person
25 at the wrong time perhaps, yes, it could potentially

1 cause a fracture, but it is almost unheard of that
2 it would cause a cervical spine fracture.

3 Q. And it's almost unheard of because it
4 shouldn't happen, right?

5 A. Because it doesn't happen.

6 Q. It shouldn't happen, correct?

7 MR. REGNIER: Objection. Asked and
8 answered.

9 BY MR. RUF:

10 Q. Doctor, would you agree that a cervical
11 spine fracture should not happen?

12 A. Well, you asked me if it was unheard of
13 because it shouldn't happen. It's unheard of
14 because you don't hear of them because it doesn't
15 happen, and yes, certainly it shouldn't happen.

16 Q. Have you ever studied the literature as
17 to whether there's documentation of cervical spine
18 fractures from Chiropractic manipulation?

19 A. I haven't personally done a literature
20 review, but I have read this Rand study and based --
21 and they did a literature review, an extensive
22 study, and concluded that the probability of
23 fracture occurring is so small that it's barely --
24 barely warrants any kind of -- any kind of
25 recommendation in terms of risk with regard to it.

1 Q. And do you agree there was an extensive
2 literature review for the Mercy Guidelines?

3 A. Yes.

4 Q. Have you ever done an extensive
5 literature review of complications from Chiropractic
6 manipulation?

7 A. Not personally, no. I've simply read the
8 reviews that are available.

9 Q. How many times have you been an expert
10 for a Plaintiff or a patient in a Chiropractic
11 malpractice case?

12 A. Again, I don't know the number, but a
13 number of them; probably eight or ten maybe.

14 Q. And in those eight or ten cases, in how
15 many of them did you conclude that the Chiropractor
16 deviated from acceptable Chiropractic practice?

17 A. Any case that I accepted I, of those
18 eight or ten, I would have rendered that opinion.

19 Q. So what percentage of the time have you
20 been an expert for the Plaintiff versus expert for
21 Defendant?

22 A. Probably ten to fifteen percent for the
23 Plaintiff.

24 Q. What Plaintiffs' lawyers have you worked
25 with? Do you recall any of their names?

1 A. No, I can't. I don't keep those in
2 memory.

3 Q. When was the last time you were an expert
4 for a Plaintiff in a Chiropractic malpractice case?

5 A. It might have been two or three years
6 ago.

7 Q. What about before that?

8 A. It would have all been within the past
9 fifteen or so years since I've been -- you know,
10 since people have been sending me cases such as
11 these.

12 Q. Did any of the cases involve a modified
13 rotary break due to manipulation?

14 A. I don't recall.

15 Q. Have you ever rendered the opinion that a
16 modified rotary break was performed improperly?

17 A. I don't recall if I have or not.

18 Q. Have you been an expert for Mr. Regnier
19 in the past?

20 A. No.

21 Q. I'm sorry, what did you say?

22 A. No.

23 Q. How about the law firm of Eastman and
24 Smith?

25 A. I don't believe so.

1 Q. Do you know where he got your name?

2 A. No.

3 Q. Have you been an expert in cases
4 involving NCMIC, as the insurance company?

5 MR. REGNIER: Objection. Go ahead,
6 Doctor.

7 THE WITNESS: I have, yes.

8 BY MR. RUF:

9 Q. And how many times have you done that?

10 MR. REGNIER: Continuing objection.
11 Go ahead, Doctor.

12 THE WITNESS: That I don't know. I
13 would say I review more cases for subscribers of
14 Princeton Insurance Company than I do for NCMIC, but
15 the numbers I couldn't tell you.

16 BY MR. RUF:

17 Q. Could you give me any kind of estimate?

18 A. I would say probably sixty to seventy
19 percent of the cases I reviewed have been for
20 subscribers of Princeton Insurance Company.

21 Q. Have you ever been an expert for the
22 Plaintiff where NCMIC is the insurance company
23 involved in the case?

24 A. I believe I have on one or two occasions.

25 Q. Do you remember what the cases were?

1 Could you tell me the issue or the facts in any of
2 them?

3 A. No, I really couldn't. I believe one was
4 a case of scoliosis in a child, but honestly I can't
5 remember, and generally when I get these cases in I
6 don't -- I usually don't even know which insurance
7 company is involved until late in the case. It's
8 not a question I ask.

9 Q. Do you know the city or State of any of
10 those cases?

11 A. No.

12 Q. What are your charges for being an
13 expert?

14 A. I charge \$350 per hour for whatever time
15 I, you know, I devote to these cases, whether it's
16 for reading material or for deposition time or
17 courtroom testimony.

18 Q. How much time have you spent on this
19 case?

20 A. I don't know. Several hours.

21 Q. Do you know the amount of your total bill
22 for this case?

23 A. No.

24 Q. Did you give all of your bills to
25 Mr. Regnier?

1 A. I gave an initial statement I guess to
2 them when I initially reviewed and prepared my
3 report, but I have not provided an up-to-date
4 bill -- an updated bill at this point.

5 Q. Okay.

6 MR. RUF: Mike, at this point I'd
7 request copies of his bills.

8 MR. REGNIER: Sure.

9 BY MR. RUF:

10 Q. Could you tell me approximately how much
11 money you make per year being an expert witness?

12 A. I really can't. It usually is about ten
13 percent of my general income. Ninety percent of my
14 income is from direct patient care from my practice.

15 Q. Well, approximately how much money do you
16 make per year being an expert, if you do the math?

17 A. Oh, probably maybe 20,000, 30,000 maybe.

18 Q. Have you ever seen a patient with
19 permanent residual problems as a result of a neck
20 fracture?

21 A. I can't recall really specifically if it
22 was specifically as a result of a neck fracture
23 alone. I've certainly seen patients who have had
24 neck fractures, but oftentimes the residual problems
25 are not the result of the fracture at all, it's the

1 result of other underlying problems that usually,
2 you know, relate to degenerative changes that might
3 occur in the neck.

4 Q. Have you seen patients that have had
5 permanent conditions as a result of damage to the
6 nerves in the cervical spine?

7 A. Sure.

8 Q. And has it been your experience that when
9 there's an injury involving damage to the nerve in
10 the cervical spine that generally the healing occurs
11 within a year of the injury?

12 A. Generally when there's nerve injury,
13 nerve damage, it could take nine months to a year or
14 so before a patient realizes the -- maximally
15 improves as a result of that injury.

16 Q. Has it been your experience that if
17 conditions persist beyond a year, that those
18 conditions are permanent?

19 A. They're likely to be permanent, although
20 they can still improve some over more time. There's
21 likely to be some degree of permanency to it,
22 although the way a patient feels within a year after
23 an injury, if you give them another year or two,
24 they certainly could be considerably better than
25 they were after a year in terms of their functional

1 capabilities and their level of pain.

2 Q. Do you know what Kimberly Richley's
3 current condition is?

4 A. Not specifically, no.

5 Q. Would you agree that it's more probable
6 than not that her current condition is permanent?

7 A. I really couldn't address those issues,
8 you know, without seeing either a report of a
9 Functional Capacity Evaluation or a report from
10 someone who has actually evaluated her from a
11 disability perspective or by examining her myself,
12 but from the records I've reviewed so far I really
13 couldn't give a good answer to that question.

14 Q. Do you use a written consent in your
15 practice?

16 A. No.

17 Q. I'm sorry, no?

18 A. No.

19 Q. Do you ever keep personal notes on
20 patients outside of the patient's file?

21 A. Generally not. Occasionally, depending
22 on various circumstances, we might, you know, use a
23 sticky note on a patient's chart and then make an
24 entry later, but I generally don't keep a separate
25 file on a patient.

1 Q. That would be highly unusual to do that?

2 A. I don't know that it's highly unusual. I
3 would say it's not typical.

4 Q. Would it be highly unusual in your
5 practice to do that?

6 A. I'm sorry, go ahead, say that again.

7 Q. It would be highly unusual in your
8 practice to keep notes on a patient outside of the
9 patient's file?

10 A. Yes, I generally would not do that.

11 Q. And under what circumstances would you do
12 that?

13 A. I don't think that I would.

14 Q. You went to the same Chiropractic school
15 as Dr. Reichenbach, correct?

16 A. I don't recall what school he went to.

17 Q. What portion of the videotape of
18 Dr. Reichenbach did you review?

19 A. It's been a while since I reviewed that
20 videotape, but I believe it was a partial videotape
21 of his deposition.

22 Q. What part did you review? Can you
23 describe it for me?

24 A. To be honest with you, I'd have to review
25 it again to be able to answer specific questions on

1 that videotape.

2 Q. Was there anything of significance in the
3 tape that you reviewed to you?

4 A. You'd have to ask me specific questions.
5 I really can't recall anything specific.

6 Q. Well, tell me what you recall about the
7 tape you reviewed?

8 A. I believe it was -- there was an aspect
9 of it where he was describing the type of
10 manipulation he performed, and as of right now
11 that's about all I remember.

12 Q. Are you aware of Dr. Reichenbach's doing
13 any other cervical manipulation during any of his
14 office visits, other than a modified rotary break?

15 A. During any of his prior office visits
16 prior to 10-17?

17 Q. No, from 10-17 through 10-22-02.

18 A. Oh.

19 Q. Is there a way you could demonstrate how
20 a modified rotary break is performed for the video
21 --

22 MR. REGNIER: Mark, did you want him
23 to answer your original question? He's looking at
24 the record.

25 MR. RUF: I'm sorry, I thought he

1 gave an answer.

2 MR. REGNIER: No.

3 THE WITNESS: No.

4 As far as the cervical spine, he only
5 identifies the modified rotary break.

6 BY MR. RUF:

7 Q. So you know of no other cervical
8 manipulation that was performed, other than a
9 modified rotary break, between 10-17-02 and
10 10-22-02?

11 A. That's correct.

12 Q. Is there a way you could demonstrate for
13 the camera how a modified rotary break is performed?

14 A. There would be --. I would really need
15 to perform that on somebody.

16 MR. RUF: Do you want to volunteer,
17 Mike?

18 MR. REGNIER: No.

19 BY MR. RUF:

20 Q. Do you have any kind of skull model there
21 or vertebral model?

22 A. I do, but it really doesn't do it
23 justice. If you want, I can bring a spine up and
24 make some demonstration.

25 Q. Well, could you show what hand motions

1 you use in performing a modified rotary break to the
2 cervical spine?

3 A. The movement, if the patient is in a
4 supine position, would be to cradle the head,
5 distract it and side bend it, and then if the
6 patient can tolerate that position, then an impulse
7 is delivered from that position.

8 Q. Okay. Did you just demonstrate that on
9 camera?

10 A. Yes.

11 Q. Okay, thank you, Doctor.

12 Would you agree you have no expertise
13 in epilepsy?

14 A. Yes.

15 Q. And you have no expertise in seizures?

16 A. I'm certainly not an expert in those --
17 in that area, yes.

18 Q. Have you seen Dr. Mann's report? At the
19 top of this report it says University Suburban
20 Health Center. It's a letter of September 10th,
21 2004.

22 A. I don't believe I saw that report.

23 No, I have not.

24 Q. I'm just looking over my notes, Doctor.

25 What correspondence have you received

1 from Mr. Regnier?

2 A. When?

3 Q. I'm sorry?

4 A. When?

5 Q. Throughout this whole process?

6 A. What records have I reviewed?

7 Q. What correspondence have you received
8 from him?

9 MR. REGNIER: What correspondence, he
10 asked.

11 THE WITNESS: Letters that he may
12 have written to me?

13 BY MR. RUF:

14 Q. Sure. Have you also received any
15 E-mails?

16 A. No, no E-mails.

17 Q. Okay.

18 MR. RUF: I'd ask the Court Reporter
19 to mark all the letters as exhibits to this
20 deposition.

21 BY MR. RUF:

22 Q. Can you pull those letters aside so they
23 can be marked as exhibits, Doctor?

24 A. Sure.

25 Q. Have you discarded any letters or

1 correspondence you received from Mr. Regnier?

2 A. I don't believe I have.

3 Q. I'm sorry?

4 A. I don't believe so, no.

5 Q. What about your report, did you issue any
6 kind of draft to Mr. Regnier before the final?

7 A. I don't believe so.

8 Q. Did you discuss your findings with
9 Mr. Regnier before you issued your report?

10 A. Yes, I did.

11 Q. Did he ask you to include anything in
12 your report?

13 A. Not that I recall.

14 Q. Have you had any meetings with
15 Mr. Regnier?

16 A. Just this morning, prior to --

17 Q. How long was your meeting?

18 A. About forty-five minutes.

19 Q. What did you discuss?

20 A. Discussed aspects of the case.

21 Q. Did you discuss seizure as a possible
22 cause of the fracture?

23 A. That came up briefly.

24 Q. You did not put seizure as a possible
25 cause of the fracture in your report, correct?

1 A. Correct.

2 Q. First time you talked about seizure was
3 at this deposition today, correct?

4 A. No, I've discussed it in the past. You
5 know, I knew she had a seizure disorder and that was
6 something that was always in my mind as a
7 possibility. I simply basically when I drafted my
8 report I just included that under the I guess the
9 general aspect of undisclosed events.

10 Q. But at the time of your report you put
11 the most plausible scenarios that you thought in the
12 report, correct?

13 A. Yes.

14 Q. Have you reviewed anything else that's
15 not listed in your report?

16 A. No.

17 Q. Have you conducted any research for this
18 case?

19 A. Reviewed a couple of textbooks with
20 regard to facet fracture.

21 Q. Okay. What textbooks did you review?

22 A. Reviewed the Essentials of Skeletal
23 Radiology by Yochum and Rowe, and Whiplash
24 Acceleration/Deceleration Injuries by Foreman and
25 Kroft.

1 Q. And what did you review in there?

2 A. Just looked up their -- any information
3 that they had with regard to the type of fracture
4 that Ms. Richley was ultimately diagnosed with.

5 Q. Would you agree that facet fractures are
6 typically caused by flexion and rotation?

7 A. No, I wouldn't agree with that.

8 Q. Do either of those textbooks state that
9 facet fractures are typically caused by flexion and
10 rotation?

11 A. No.

12 Q. Would you agree that Kim Richley's facet
13 fracture was probably caused by rotation?

14 A. No, I couldn't agree to that. I wouldn't
15 know, you know, what mechanism caused her fracture.

16 Q. You don't have an opinion on that?

17 A. No. But pure rotation alone is not
18 likely to fracture a facet joint.

19 Q. What about flexion plus rotation?

20 A. That's also a mechanism that would not
21 likely fracture a facet joint. That actually takes
22 pressure off the facet joint.

23 Q. Can you state any benefit that Kim
24 Richley received from the rotary manipulation -- I'm
25 sorry -- the modified rotary break of her cervical

1 spine?

2 A. Any benefit that she received?

3 Q. Yes.

4 A. On 10-19-02, which is the day after the
5 first cervical spine adjustment, Dr. Reichenbach
6 indicates that she was improved.

7 Q. Do you know how she was improved?

8 A. He doesn't really get into detail on
9 that, no.

10 Q. Any other benefit you're aware of?

11 A. Not anything specific, no.

12 Q. In your opinion if the patient is not
13 receiving benefit from cervical manipulation, should
14 those manipulations be discontinued?

15 A. Well, in time, but, you know, it has to
16 be over a reasonable time period.

17 Generally with manipulative therapy
18 we don't always expect immediate improvement. Many
19 times it requires a series of treatments to realize
20 some improvement, but generally within a two to four
21 week period with fairly regular manipulative
22 sessions, if there's little to no improvement after
23 that time frame, then either the method should be
24 changed or it should be stopped and further
25 investigation should be ensued.

1 Q. Do you know how Mr. Regnier found you as
2 an expert?

3 A. No, I don't.

4 Q. Do you advertise at all for your expert
5 services?

6 A. No, I don't.

7 Q. Do you testify for your own patients in
8 personal injury cases?

9 A. I believe I've only had to do that once
10 in my career.

11 Q. Do you know whether or not you testified
12 that the patient's condition was permanent?

13 A. I don't recall. It was many years ago.

14 Q. Do you ever obtain police reports to try
15 and get patients?

16 A. No.

17 Q. What type of Chiropractic practice do you
18 have?

19 A. My practice is I treat primarily
20 musculoskeletal conditions with non-surgical,
21 non-drug techniques, mostly back and neck
22 complaints, but I also treat other orthopedic type
23 conditions involving the shoulders, elbows, wrists,
24 hands and lower extremity conditions as well, but
25 probably eighty percent of my practice revolves

1 around low back and mid-back and neck complaints.

2 Currently or for probably the last
3 ten or fifteen years about seventy percent of any
4 new patients that come into my practice are medical
5 referrals referred from some form of medical doctor,
6 either primary care physicians or some sort of
7 specialist who specializes in neuromusculoskeletal
8 conditions.

9 Q. So physician referrals to your practice
10 are an important part of your practice?

11 A. That's been a fairly substantial part of
12 my practice for a fair number of years now, yes.

13 Q. If a patient has any type of fracture, is
14 that something you treat or do you refer the patient
15 to a medical doctor for that?

16 A. If someone has an acute fracture,
17 depending on the nature of the fracture, I will
18 refer them to generally an orthopedic surgeon for
19 that.

20 Q. Do you ever refer patients to
21 neurosurgeons?

22 A. Yes.

23 Q. Approximately how many patients do you
24 have in your practice?

25 A. How many total patients over twenty-eight

1 years or what kind of number are you looking for?

2 Q. Right now, per year, approximately how
3 many patients do you see?

4 A. How many patients do I see per year? My
5 practice sees about two-hundred-fifty to three
6 hundred patient visits per week, so you can
7 calculate that out.

8 Q. What hours do you have during the week?

9 A. My office is open from 8:30 a.m. until
10 7:30 p.m. Monday through Friday. I have an
11 associate doctor who works part of those hours.

12 Q. How many patients do you see per day?

13 A. Personally myself? On a full day where
14 -- if I'm seeing patients in a full day, which is
15 usually about a ten hour day, I will see anywhere
16 between fifty and seventy.

17 Q. Has your license ever been subject to
18 disciplinary action?

19 A. No.

20 Q. Have you ever been arrested?

21 A. No.

22 Q. Have you ever been investigated
23 professionally?

24 A. No.

25 MR. RUF: Okay, Doctor, that's all I

1 have. Thank you.

2 THE WITNESS: You're welcome.

3 MR. REGNIER: Doctor, you have the
4 right to review the deposition for typographical
5 errors or you can waive that right, it is up to you.

6 THE WITNESS: Okay.

7 MR. REGNIER: What would you like to
8 do? You have to put it on the record.

9 THE WITNESS: I would like to review
10 it.

11 MR. REGNIER: Okay.

12 THE VIDEOGRAPHER: This now concludes
13 the videotape deposition of Dr. Gary Tarola. The
14 time is 12:04 p.m.)

15 (Deposition concluded.)

RE: Richley vs. Reichenbach Family Chiropractic

Dear Mr. Ruf:

Enclosed please find the completed signature and errata pages as well as the original transcript of the deposition of Gary Tarola taken on September 29, 2004 in the above case.

Thank you for your cooperation. If you have any questions, please do not hesitate to contact me.

Very truly yours,

Kim Jones

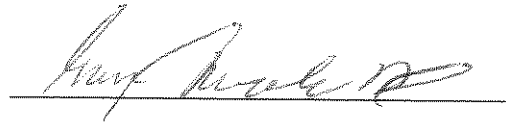

Enclosure

Re: Kimberly Richley vs. Reichenbach Family Chiropractic Professional, et. al.

Dear Mr. Regnier:

This is a follow-up to my report of July 17, 2004 to address the issue of informed consent regarding cervical spine fractures occurring as a result of cervical spine manipulation. In the absence of significant red flags, such as symptoms and signs of infection and cancer, significant recent trauma or moderate to severe bone weakening disorders, the risk of cervical spine fracture with chiropractic manipulative techniques is so remote that a risk estimate has never been established, nor has it ever been a focus of investigation. I am unaware of any case reports in the literature alleging that such a fracture occurred as a result of chiropractic cervical manipulation. And after 28 years of practice and almost 20 years of peer review and medical legal consulting this is the first such case I have seen.

It is my opinion therefore that a cervical spine fracture of this nature is not a material risk, and therefore informed consent, written or verbal, was not required. In this case, Ms. Richley was under treatment with manipulative therapy for her lower back and was aware of the nature of the treatment. Dr. Reichenbach discussed her cervical spine condition and informed her of his recommendation to perform manipulation to her cervical spine. Therefore, informed consent was implied.

If you have any additional questions please contact me personally.

Sincerely,

Gary A. Tarola, D.C., FACO
